It is a universally acknowledged fact that the designing and manufacturing of bicycles, and the many ingenious devices designed for use in connection with them, have been the means of adaptation into other lines of manufacturing of improvements which otherwise might have taken years in proving inventive adaptability. This is especially true of those leading manufacturers in other lines who have also produced wheels. In line with this statement, we take pleasure in illustrating and describing herewith a ball-bearing flywheel and pitman used in the sewing machine manufactured by the National Sewing Machine Co., Belvidere, Ill.

This company, as is generally known, for many years have been extensive manufacturers of high-grade bicycles, their Eldredge wheel being as widely and favorably known as any that have held the market. The experience thus obtained with bicycle ball bearings very naturally led them along the line of application which resulted in the adaptation of a ball bearing for their sewing machine. They practically demon-

strated, by exhaustive tests, that a ball-bearing stand would run fully 80 per cent. lighter than the old style of construction, without ball bearings. In each stand of their make there are three separate and distinct ball bearings, containing, all told, forty accurately ground and carefully hardened steel balls. The balance wheel is supported on two sets of bearings, one on each end of spindle. The pitman, which transmits power from treadle to balance wheel, is fitted at its upper end with ball bearings. Many stands will be found fitted with wooden pitmans, having a round hole through the upper end, through which a plain stud passes, thus making a bearing which develops an unnecessary amount of friction. These improved stands are of the latest ribbon pattern, and particular attention is called by the company to the smoothness and brightness of the enamel finish, as well as to the casters on which the stands rest, which are all polished and nickel-plated. The machines are fitted with light, easy-running pedals, placed at the most desirable angle.

The great advantage of introducing ball bearings into a sewing machine stand must be obvious to every user, for certainly no person would now think of purchasing a bicycle without ball bearings, and it is equally certain that these bearings are of as much or greater importance in a sewing machine. In fact, the National Sewing Machine Co. make the claim, with apparent justice, that ball bearings applied to sewing machines form their greatest improvement in many years.

Imports of Tropical Products.

The people of the United States are paying a million dollars a day for tropical products used in manufacturing or food and drink, and most of which are produced in greater or less degree or can be readily produced in the islands which have come into closer relationship with the United States through the events of the past two years. The April Summary of Commerce and Finance, which has just been issued by the Treasury Bureau of Statistics, shows that in the 10 months ending with April our imports of tropical products have been over $300,000,000 in value, thus averaging fully a million dollars a day and indicating that for the full year they will reach $365,000,000.

India rubber, fibers, raw silk, cotton, gums, cabinet woods, indigo, ivory, dyewoods and certain lines of chemicals make up the share of this vast sum which the manufacturers of the United States take and require in constantly increasing quantities. The importation of raw materials for use in manufacturing has increased steadily and now forms more than one-third of our total imports, and the large proportion of this comes from the tropics. Of india rubber alone the imports of the 10 months amount to more than $27,000,000; of fibers, to $20,000,000; of unmanufactured silk, $40,000,000; of cotton, over $7,000,000; of gums, more than $5,000,000, while cabinet woods, dyewoods, indigo and ivory also aggregate several millions.

Of the constantly increasing proportion of imports of foodstuffs, sugar, of course, is first, and of that the proportion which comes from the tropics is vastly greater in the past year than in immediately preceding years, the Dutch East Indies, which lie just alongside the Philippines, being now our largest single source of supply for sugar. For the 10 months the importations of sugar are more than 80 million dollars; those of coffee nearly 50 millions; tea, nearly 10 millions; tobacco, 16 millions; tropical fruits and nuts, 15 millions; cacao and chocolate, 5 millions, and such other articles as spices, rice, olive oil, etc., add several millions to the total.

The Typewriter and the Eye.

There is the general opinion among oculists that the eye is much relieved by the general introduction of typewritten matter. A recent medical work upon diseases of the eye gives a great many proofs in substantiation of this opinion. The characters are so large on the keys that there is no appreciative strain on the vision, and when dexterity is attained the eyes can scarcely be said to be used at all. A vast strain is taken off the eye by writing with the typewriter instead of the pen, but the advantages of reading the typewritten matter are even more important, from a medical point of view, and the strain upon the hands is also slight. It is said that a person can work for eight consecutive hours, with slight interruptions, without the hands being conscious of fatigue. In using the typewriter the additional labor of focusing the eyes calls the muscles into undue use, and the result is that many defects of vision, which would not probably be discovered under normal conditions, are brought to the front.—*Scientific American.*

Charles Churchill & Co., Limited, 9 to 15 Leonard Street, London, who have been established since 1865 as engineers and importers of American machine tools, fine tools for mechanics and machine shop supplies, have recently issued a brochure giving detailed information regarding their several branch establishments located at 2 to 10 Albert Street, Birmingham; 52 Bothwell Street, Glasgow; 2 Charlotte Street, Mosley Street, Manchester, and Albion Buildings, Newcastle-on-Tyne. Illustrations are given, showing their several buildings and conveying a good idea of the immense business being transacted by this large importing house, together with portraits of the several managers. It is a handsomely printed booklet, showing taste and care in its construction that would attract attention in any part of the world to which it might wend its way.

A TOW-HEADED BOY.

He was a tow-headed, freckle-faced boy, the kind of a boy you read about, but the kind you don't like to have around when you are calling on his sister.

He had arrived at the dignified age of ten years, an age when a boy—that is, the real, genuine article—is an uncertain quantity; when he has just begun to discover amongst other important facts that he is the possessor of great talent—one might say genius—in certain directions; in other words, that he has a calling, and this calling, when properly exercised, develops within his soul a sublime faculty of getting himself, and every one with whom he comes in contact, into trouble of some sort or other. Such a boy is full of surprises, most of them unpleasant. But he will occasionally display an unexpected trait of nobility in his character—"the leaven that leaveneth the whole lump"—the one redeeming feature of his complex nature that makes us forget all we have suffered from him, and love him just because he is a boy.

It was this same sort of a boy that was left by a frontier father and mother in charge of his little two-year-old sister during their absence on an errand of urgent necessity.

A neighbor, living some twenty miles away, had ridden up to the house in great haste early that morning, announcing to the good wife that her only sister lay at the point of death at her home fifteen miles away.

Death or sickness in a mountain section is of an entirely different aspect from death in a city. It is matter of concern to every man, woman and child in the particular neighborhood where it occurs. It is an appeal for help quickly and gladly responded to by every neighbor within reach, at no matter how great an inconvenience to themselves.

And it was such a summons that came unexpectedly to the parents of the tow-headed boy.

"We'll ride over there," said the man to his wife, "and do what we can, and get back this afternoon. The children will be all right if they stay in the house."

There was no other way out of the difficulty, and his wife reluctantly consented to the plan.

They gave the boy to understand that he must under no circumstances leave the house until their return.

The house, a rough log cabin, with one door and an unglazed window, stood in the center of a small clearing of about an acre and a half. This had been partially enclosed by a rail fence extending along two sides of the clearing, and leaving wide gaps at either end, where the bushes served temporarily as a continuation of the fence.

In the surrounding forest were many wild animals, and the parents of the boy fully realized the danger that threatened their children unless they were confined to the house, and nothing but the urgency of the case could have induced them to leave their home thus unprotected.

But the boy promised faithfully to obey orders and looked sufficiently impressed with the gravity of the situation to keep his word. As an extra precaution, however, his father fastened the door on the outside, and he and his wife rode rapidly away on their journey.

* * * * * * * *

Now the tow-headed boy was not averse to being left alone in charge of the whole place. There was a thing or two that had long needed investigating on his part, but owing to the eagle, and in his estimation, tyrannical, eye of his mother, he had been obliged to content himself with mere idle speculation; a boy, and especially a tow-headed boy, does not care for speculation. What he wants are the cold, bare facts.

So this boy proceeded to discover a few facts, and he learned several things, and did a few more which made him unconsciously stroke certain portions of his anatomy as he thought of what the future had in store for him. When his baby sister cried he dipped a piece of corn bread in the molasses jug and gave it to her to suck, which answered the purpose and kept her quiet.

He finally settled on some pictures that he had been told over and over again not to touch. His father had brought them home from one of his infrequent trips to town. They were only advertisements of certain sportsmen's goods, but to the boy they were beautiful works of art. The one that proved particularly fascinating was that of a boy, not much bigger than himself, with a gun in one hand and holding up a huge wild turkey with the other hand, a turkey almost as big as himself.

The boy studied the picture long and earnestly, then put it away and crossed the room, and stood gazing at his father's rifle hanging beside the fireplace. He had been informed many times of the exact nature of the punishment that would be inflicted upon his youthful person if he ventured to lay hold of this particular weapon. With that thought in mind he climbed up on a stool and took the rifle down and examined it. He knew that it was loaded.

If he were only outside perhaps he might shoot a turkey. He went over to the door and tried it. It was fastened and he could not move it. He sighed and glanced first at the open window and then at his sister, who seemed quite contented, and then back to the window again. Then he climbed up on the table underneath the window and looked out. How still everything was: a Bob White called to his mate, a squirrel scolded from the top of a big pine in front of the house, and way off in the distance the boy could hear a partridge drumming, but the sounds only seemed to intensify the stillness.

And then, somehow, before he realized it, the boy found himself outside the house. He was a tow-headed boy, and how could he resist when the Bob White and the squirrel and the partridge were all calling him? He removed the stick with which his father had fastened the door and opened it. Then he got the rifle and sat in the doorway, with the weapon across his knees. But this soon became monotonous, and he rose to his feet and commenced walking around a bit with the gun across his shoulder, stopping occasionally to aim at some imaginary turkey. He soon became so preoccupied that he failed to notice his little sister come to the door and toddle out into the yard and begin playing in a pile of sand near the house. He was having a beautiful time all to himself.

Suddenly, as he lay crouched behind a log, aiming at an imaginary "Injun," he became aware of a slight movement in the bushes, and then, to his surprise and consternation, the bushes seemed to part and a big, yellow colored animal crept out into the clearing. The boy wondered what it could be and decided that it must be a mountain lion. He had once seen a dead one. The animal had his eyes fastened on some object behind the boy. The latter turned slowly to see what it was, and was horrified to discover his sister playing in the sand outside the house. The lion, for such it was, was creeping slowly toward her.

And here is where the boy showed of what stuff he was made. He was frightened, badly frightened, but he realized that his sister's life was at stake. He rested the rifle on the leg in front of him and aimed, in a general way, at the

Digitized by Google

beast and pulled the trigger. The lion bounded high in the air with a great cry of pain, rolled over and over on the ground, biting at everything within reach, and then lay quite still.

The boy had made a lucky shot. The recoil of the weapon knocked him flat on his back, and he lay there half stunned, expecting every second to feel the lion pounce upon him. He was brought to his senses by hearing a shout close at hand, and sat erect in time to see his father dash into the clearing, with his horse on the run, and then, before he knew it, he felt himself clasped in a mighty embrace and found himself in his father's arms, while his mother was performing a like act with the astonished baby.

"You little devil!" his father exclaimed. "What were you doing outside the house, and how'd you get out?"

"I don't know," the boy innocently remarked. "I guess it just happened that way."

* * * * * * * *

That evening, after supper, the tow-headed boy sat perched up on his father's knee, with the picture of the boy and the turkey clasped in his hands. He was enjoying to the fullest extent the novel sensation of being idolized as a hero, and was making the most of the situation.

"What does the printing say?" he asked his father, pointing to the card.

"It says 'His First Turkey,'" his father replied, "and the rest of it is about the kind of powder the boy used when he shot the turkey."

"Do you use it?" the boy inquired.

"No, my son," his father answered.

"Well," said the boy, "I guess it's better powder than yours, 'cause if his gun kicked as bad as yours did he wouldn't be looking so happy. Can't I have a gun, too?"

"That you can," said his father. "I'll go to town tomorrow and buy you one, and I'll send for some of this powder. See, I have the address of the firm that makes it. Here it is: '99 Cedar Street, New York City.'"

The tow-headed boy was the happiest boy in the whole world that night. "FAYETTE."

Safety of American Railroads.

There are 50,000 flagmen, switchmen and line watchmen employed on the railroads of the United States, and the duties which devolve upon them relate primarily to the security of passing trains. The use by them of lanterns at night and flags by day, while desirable in a small way as a means of protection, especially at crossings, is by no means so important as the signal lights which are displayed from towers and which are regulated by telegraphic communication maintained along the line of track. Under the signal rules adopted by the American Railroad Association, the application of which is general not only throughout the United States, but in Mexico and Canada as well, a red light, whenever displayed, signifies danger and calls for a stop; a green light cautions and commands "Go slowly;" white indicates safety and commands "Go ahead." A blue flag by day and a blue light by night displayed at one or both ends of an engine, car or train signifies that workmen are engaged on or about it. When thus protected it must not be disturbed.

One effect of the more general use of uniform signals has been the steady reduction of the number of fatalities on American railroads, the total number of which is now considerably less than it was ten years ago, though in the meantime railroad travel has increased enormously. The total number of passengers carried on American railroads in a year is not far from 600,000,000, and the number of fatalities to passengers averages less than 250, or less than one two-thousandth of 1 per cent. While the number of passengers carried is increasing, the number of accidents is diminishing, in consequence of the fact that, while some railroad accidents appear to be absolutely unavoidable, serious accidents, entailing the wrecking of trains and wholesale disasters, are very much less frequent that formerly. The adoption and maintenance of a complete system of railroad signals entail a considerable expense upon railroad companies, but it is much more than made up by the advantages attained, which include greater security in travel, a high rate of speed for passenger trains, a much diminished danger of track obstruction and a practical diminution in the number and success of suits brought for damages. The work of making travel safe on American railroads is going ahead even faster than is the work of railroad building, actively resumed since 1897.—*American Exporter.*

Utilizing Coke Waste.

Coke cinders have been piling up for many years, until there are immense pyramids of fuel of excellent quality scattered all through the coke region for which there has been no adequate method of utilizing. Many devices have been tried to place this waste in a form in which it could be used, and the usual plan has been to make briquettes, in which a composition of pitch has been the cement. This makes an unpleasant odor and disintegrates under an intense heat. An inventor of Connellsville has patented a binder which, it is claimed, has been tested thoroughly and with favorable results. His briquettes have been used in furnaces and foundries alongside of coke, and they last two-thirds longer than coke and burn from the outer circumference to the core, with no disintegration or breakage. They are easily ignited and there is no sign of smoke, burning with a clear flame. The cost of making the new briquettes is 28 cents a ton, and their low cost will be a factor in the use of coke at $3 to $3.85 a ton. An option has been secured on a big deposit of this waste cinder and the work of placing it in a marketable shape will be commenced soon.—*American Exporter.*

The Discoverer of Anthracite.

The Scranton, Pa., *Tribune* says: "The proposition to build a monument to the memory of Philip Guenther, the discoverer of anthracite coal, has again been taken up, with the probability that it will soon be accomplished. It is the desire of those interested that the monument shall be coal 'stone,' which has contributed much to the material and commercial wealth of the State, and especially to this section of it. Guenther, who first brought coal into successful use, lived in a rough cabin in the forest on the Mauch Chunk mountain, Carbon County. While in quest of game for his family, whom he had left at home without food of any kind, his foot stumbled against a black stone. By the roadside not far from the town of Summit Hill he built a little fire of wood and threw pieces of the supposed stone about it so that the embers might last longer while roasting fowl."

Bicycles on English Railway.

A new van for the carriage of cycles is being tried by the London and North-Western Railway Co. It has carrying capacity for forty-four cycles; and by an ingenious system of extending arms, which shoot out from hinged plates at the sides, and which are intended to hold the cycles in position, ample space is allowed for carriage of personal baggage between the machines. When not in use for the carriage of cycles, by simply folding back the arms on their hinges the whole of the space is available for the carriage of ordinary luggage. The van has three doors on either side, and at each end is a passage allowing the guard to pass through by the corridor system to another part of the train.—*The Engineer.*

An Englishman was once persuaded to see a game of baseball, and during the play, when he happened to look away for a moment, a foul tip caught him on the ear and knocked him senseless. On coming to himself he faintly asked:

"What was it?"

"A foul—only a foul.

"Good heavens!" he exclaimed, "I thought it was a mule."

ITEMS OF INTEREST FROM EVERYWHERE.

It is estimated that in Paris 1 in 18 of the population, or 150,000, live on charity, with a tendency toward crime; in London this class is 1 in 30.

Canada will have 1697 exhibits, valued at $200,000, at the Paris Exposition. The display embraces horticulture, agriculture, minerals, timber—all natural products—manufactures and the government exhibits of fish and game.

As soon as a franchise is secured from the British Columbia Parliament work on a tunnel through Chilcoot Pass will be begun by the Chilcoot Co., which will expend $2,000,000 in the work, and building an electric railway from Dyea to Whitehorse.

An invention which promises to revolutionize the manufacture of brass castings has been perfected by a Detroit, Mich., inventor. With it two men are able to do the work of twenty-seven, and an average saving is effected of $20 a ton—about 75 per cent.

Switzerland imported 15,027 bicycles in 1898, the highest-priced ones ($65.30) coming from Belgium, and the lowest ($42.16) coming from America. The American wheel is admitted to be the best as well as the cheapest. Only 21 wheels were imported in 1895.

A railroad man says that there is no limit to the size of the American locomotive, and "as long as heavy rails can be secured, just so long will engines grow. Some of these days we will be using 200-pound rails and locomotives twice the size of those now in use."

India imported 359,000 tons of coal, coke and patent fuel in 1898-99, and produced 12 1-2 tons for every ton imported. There were 174 mines in operation in 1898, 158 of them being in Bengal. The product has quadrupled since 1886. Five years ago Bengal exported 235,000 tons, and in 1898 the figures had increased to 1,284,000 tons.

Some genius in Toronto, Ont., has devised a way to secure lumber yards located along streams or lakes from fire hazard. He proposes to make excavations well below the water level, after the fashion of dry docks, in which the lumber would be stored. Then, in case of fire, actual or threatened, the gates could be opened, the water let in and the lumber covered by it.

A recent German official report from Uruguay says: "Black and galvanized iron pipes are now being supplied by the United States, whose competition is becoming marked. American pipes, excepting the smallest sizes, have a metal cap for protecting the screw thread at one end of the pipes. This cap is considered to be superior to the English method of protecting the thread by means of rope."

At the Brooks Locomotive Works there has just been completed for the Lackawanna R. R. Co. a ten-wheel passenger engine that is claimed to be the largest ever built. It weighs 179,000 pounds without the tender, which, when loaded, weighs 120,000 more, making a total weight of 299,000 pounds, or nearly 150 tons. This monster is nearly 38 feet over all, and with the tender, 60 feet 10 inches. The length of the tender is 21 feet over bumper beams. The driving wheels are 5 feet 9 3-8 inches in diameter.

The total value of ships launched in Scottish waters in 1899 was not far from $70,000,000, and the value of the output of Scottish coal was $60,000,000, in each case the increase being more than 10 per cent. over 1898, a year of great achievements in production.

The world's record for turning out steel rails was again broken at the plant of the Illinois Steel Company on March 22d, when the day shift put out 1442 tons in twelve hours. The previous record for twelve hours was 1391 tons. Following the breaking of the world's record, the night shift turned out 1235 tons, making a total for twenty-four hours of 2677 tons. During the twenty-four hours the rolls were shut down one hour and fifty-seven minutes.

American shops turned out 2473 locomotives in 1899, the largest number they ever manufactured in one year and 598 more than were made in 1898. More than 25 per cent. of the number, or 534, were made for railway companies in other countries. Large as the output was—and it was fully equal to the capacity of the works—it was little more than sufficient to replace the engines which were worn out and discarded. There are about 37,000 locomotives in the United States.

The smallest coin now current in Europe, and the one having the least value, is the Greek lepton. The lepton is, according to the decimal monetary system, current in all countries belonging to the Latin union. Some idea of this valueless little disc of copper may be gathered from the fact that the lepton is the one-hundredth part of a drachma. The Greek drachma usually passes for the same value that a franc piece does, that is, it is about equal to 20 cents of our money.

In a German mine recently the utility of the electro-magnet for removing iron and steel articles from awkward places was shown. A bore was being sunk, and at a depth of almost 1000 feet the hardened end of the steel bit broke off. In order to get the broken piece of steel out, a soft iron bar, 5 feet long and 2.7 inches in diameter, was surrounded by a single winding of india-rubber-covered wire. It was then magnetized by means of a small dynamo and let down the hole and raised the steel to the surface without further trouble.

On January 1st there were on the farms of the United States, according to the figures of the government statisticians, 13,537,524 horses, 2,086,027 mules, 16,292,360 milch cows, 27,610,054 other cattle and 41,883,065 sheep. These figures do not include swine. There has been an increase in value during the year 1899 averaging $7.21 per head for horses, $8.60 per head for mules, $1.94 per head for milch cows and 18 cents per head for sheep, making a total increase during the year of nearly $216,000,000. The total increase during the past three years exceeds $570,000,000.

Typewriters are now made to use in all foreign languages, a large number of them being required especially for home consumption. The characters suitable for proper expressions are provided so that an equal facility for use can be cultivated by the operator in such languages as the Greek, French, Spanish, German and Italian. Our foreign Ministers and Consuls in all parts of the world demand typewriters that will write the language of the country to which they have been appointed, and Chinese, Egyptian, Turkish or Sanscrit could be provided with national characteristics, if required, by the exigencies of our commercial progression.

THE PAN AMERICAN EXPOSITION, 1901.

PRESIDENT MILBURN.

PRESIDENT OF THE PAN-AMERICAN EXPOSITION.

John G. Milburn, president of the Pan-American Exposition, is one of the leading members of the New York State Bar, and his fame as a graceful, eloquent and forceful speaker is as wide as the nation itself. A close approach to the American ideal citizen, not only as regards his life and abilities, but in personal appearance as well, Mr. Milburn makes a picturesque and notable chief executive of the Pan-American Exposition. He was born in Sunderland, England, December 14, 1851. When eighteen years old he came to this country, beginning the study of law at once in the office of Wakeman & Watson, at Batavia, N. Y. He was admitted to the bar in 1874. In 1879 he became a member of the firm of Sprague, Milburn & Sprague, of Buffalo, a business arrangement which continued until 1882. The next year Mr. Milburn spent in Denver, but on his return, in 1883, he became junior member of the well-known firm of Rogers, Locke & Milburn. Mr. Milburn has always been conspicuous in public-spirited movements, and rendered the city most valuable service as a member of the Charter Revision Commission.

JOHN G. MILBURN, PRESIDENT OF THE PAN-AMERICAN EXPOSITION.

WILLIAM I. BUCHANAN.

DIRECTOR-GENERAL OF THE PAN-AMERICAN EXPOSITION.

The Director-General of the Pan-American Exposition, the Hon. William I. Buchanan, came prominently before the public when he took a leading part in the organization of the Sioux City Corn Palace Exposition Company. He became the moving spirit of that very successful enterprise, which proved to be a stepping-stone to larger responsibilities at the World's Columbian Exposition at Chicago. Here he became chief of the Departments of Agriculture, Live Stock and Forestry, his natural executive powers finding wide opportunity for their exercise and development. The success of those departments is without precedent. At the close of the Columbian Exposition President Cleveland appointed Mr. Buchanan United States Minister to the Argentine Republic. In this important field of diplomatic work he remained nearly six years, notwithstanding the change of administration at Washington. Mr. Buchanan's eminent efficiency and usefulness at his South American post was so generally recognized by the leading men of the Argentine Republic that a request for his retention there was favorably considered by President McKinley. During his mission he was chosen arbitrator by Chile and the Argentine Republic to settle one portion of their long-standing boundary dispute that had more than once threatened war between the two countries. The task was performed so successfully and the differences settled so amicably that, in addition to his receiving the thanks of both governments, a quantity of war equipments ordered from Herr Krupp, the famous gunmaker of Essen, Germany, but not delivered to the Argentine Government, was exchanged for many miles of railway materials to be used in developing the resources of Patagonia. Mr. Buchanan also negotiated

Digitized by Google

the Commercial Convention between the Argentine Republic and the United States, and the extradition treaty with the same country now before the United States Senate. When the necessity for choosing a director-general of the Pan-American Exposition presented itself the directors saw in Mr. Buchanan the man possessing the qualities required for the successful development of such a giant enterprise. He was induced to abandon his foreign post and take up the direct management of the great work in which the people of Buffalo had so heartily enlisted. Mr. Buchanan has an intimate knowledge of the needs, the resources and conditions of Latin America, and the excellent progress making in all departments of the Pan-American Exposition shows him to be one who can view broadly the gigantic task before him and direct it with a master hand.

WILLIAM I. BUCHANAN, DIRECTOR-GENERAL OF THE PAN-AMERICAN EXPOSITION.

A Novel Feature of the Pan-American Exposition.

One of the chief attractions of the Pan-American Exposition, to be held in Buffalo in 1901, and one which has not been a feature of any previous exposition, will be a complete and comprehensive athletic carnival. For the purpose a magnificent Roman stadium, covering approximately 400,000 square feet, will be erected. The drawings for this structure show that the inclosure will not only be enormous in size, but it will be architecturally imposing. At the entrance there will be an ornamental building over 300 feet in length, surmounted by two towers of imposing height, and the entrance opening out on the arena will be over 50 feet in width. When this entrance is passed the grandeur of the building will be manifest, for the oval in the centre will be skirted by a quarter-mile track, and beyond that a tier of seats, capable of accommodating 25,000 people, will rise.

It was decided some time ago that great pageants and reviews could be held in this inclosure, and when the suggestion was made that the world's greatest athletes and sportsmen be brought together in a grand sport carnival the suggestion was seized upon and voted good. Recent developments in cycling circles make possible the holding of the world's championships in that branch of sport.

Another Branch House Opened by E. C. Atkins & Co.

E. C. Atkins & Co., of Indianapolis, Ind., who are extensive manufacturers of saws of all descriptions, find it necessary to open another branch house, this time at Portland, on account of the increased demand of their trade on the Pacific Coast.

The principal object of this branch house will be to exploit the Atkins band, circular and other mill saws, and also their special patterns of cross-cut saws. In addition to these, they will carry a full line of hand-saws, wood-saws and all other goods of their manufacture for the convenience of the trade in that section of the country.

In connection with this branch establishment there will be a large saw shop, for the purpose of manufacturing, finishing and repairing all kinds of circular saws, which shop will be in charge of skilled mechanics and will be equipped with the latest improved machinery, which will enable E. C. Atkins & Co. to meet acceptably the growing demand for their goods in that section.

The present agencies which have been representing E. C. Atkins & Co. on the Coast for some time past will continue to act in that capacity, namely: J. M. Arthur & Co., Portland, Ore.; The Western Machinery Co., Seattle, Wash., and Parke & Lacy Co., San Francisco, Cal.

The Remarkable Properties of Nickel.

At a meeting recently of the Nickel Corporation of London, England, Whittaker Wright, in discussing the properties of nickel, said: In regard to the world's supply of nickel, there are only two sources worth mentioning at the present time, one being the Sudbury mines of Ontario, and the other the mines of New Caledonia. The Sudbury ores, containing as they do sulphide of iron, nickel and copper, the process of refining is complicated and expensive—further, the nickel produced is not of the best quality, as it contains traces of antimony and arsenic, which for nearly all purposes are very injurious when present in refined nickel. On the other hand, the New Caledonian ores, being hydrated silicate of nickel, free from copper, sulphur, or other injurious impurities, the refining is comparatively simple, and the quality of the nickel produced is of an exceedingly high grade, being in the greatest demand for all purposes. I feel justified in expressing the opinion that this corporation can produce nickel of the purest quality at less cost than it can be produced by any other company, and that you will in the near future practically control the nickel market.

It is now, perhaps, in order for us to inquire as to what are the properties of this metal, nickel, that it has suddenly come into such universal demand, and also into the purposes for which it is being used. From the answer to these questions you will be able to draw your own conclusions to the profitable character of the business in which you are engaged. It has been discovered that nickel has the property, when combined with other metals in given proportions, of increasing their tenacity, malleability and hardness. In fact, a wide series of tests made by many scientific investigators, have demonstrated that nickel, when combined with steel in the proportion of 11 to 15 per cent., gives us an alloy that may be considered practically a new metal.

Take the question of tensile strength, which I may illustrate by the youngster's play at "tug of war," where each side pulls its hardest at the opposite ends of the rope. The force exerted is the "tensile strain" on the rope. The point at which the rope would break, if sufficient force were applied, represents the "tensile strength." Substitute a bar of iron (one square inch in section) for the rope, and with sufficient force this would part when the strain reached 24 tons—a bar of steel would part when the strain reached 32 tons—but a bar of nickel steel, containing 11 1-2 per cent of nickel, would not part under a strain of less than 89 tons! The "tensile strength" of nickel-steel is, therefore, nearly three times that of ordinary steel, and nearly four times that of iron.

Perhaps more remarkable still are the results of "compression" tests that have been made. To illustrate this, let us take two bars (each one square inch in section), one bar of ordinary steel, and the other of nickel steel. Stand the bars on end, and place on the top of each a load of 100 tons. What do you suppose will be the result? You will find that the steel bar will decrease in length 55 per cent., or more than one-half its length, while the nickel steel bar will only decrease in length 1 1-2 per cent. This is, indeed, a startling fact, and demonstrates the wonderful power of resistance to compression possessed by nickel-steel.

I think, however, that perhaps, most remarkable of all to practical men, and certainly most to be appreciated by them, are the results of "fatigue" tests that have been made, or in other words, the "live strength." If you take a steel bar and fix one end of it in a vise, then pull the other end slightly towards you and let it spring back again, you think nothing has happened, but if you will repeat the operation again and again you will find that after you have done it for 200,000 times the bar will break. That is its ultimate resistance, its point of "fatigue," or the limit of its "live strength." But if you will add 5 per cent. of nickel to your steel bar—in other words, make your bar of nickel-steel—you will find that your bar will not break until you have repeated the operation about a million times, thus demonstrating the astonishing fact that the "live strength" of nickel-steel is five times that of the ordinary article.

In view of the merits possessed by nickel as briefly set forth, you will not be surprised to find that there is a steadily increasing demand for the metal. I need not enumerate all the purposes to which it is put, but will content myself with referring to the fact that nickel-steel has been adopted for armor-plates, guns, small arms, marine shafting, bridge girders, boilers and tubing of great variety. In the case of an average battleship where the question of weight is of such vital importance, a hull of nickel-steel means a saving in weight over one of ordinary steel of equal strength of some 500 or 600 tons, which is a material gain when the item of fuel alone is considered. R. M. Thompson a nickel expert, has estimated that if nickel-steel were used in all the ordinary steel parts of a battleship the cost would be increased but 2 per cent., while the actual value of the ship as a fighting machine would be nearly doubled.

A Supreme Court Justice's Views.

A Supreme Court Justice, who is an authority on the subject of consolidations and monopolies, and who declined to permit the use of his name, on the ground that a case of this sort might come before him, said of the effort to apply the law to a company recently subjected to much adverse criticism:

"It is very difficult to determine whether a so-called trust offends the stock corporation law against the creation of a monopoly. Every combination of capital is, in a sense, a trust. A partnership composed of a number of persons who consolidate their businesses and capital is a trust.

"Every department store is a trust. Every large corporation is a trust. There is a law in nearly every State in the Union providing for the creation of corporations. Many of the large railroads of to-day consist of the consolidation of many smaller ones that formerly had different names. Many of our large railroad corporations have either purchased or leased connecting lines. This is so notably with the New York Central, Delaware & Hudson, and, more recently, the Pennsylvania in acquiring control of the Long Island Railroad. These consolidations are all trusts, but have the direct sanction of law and are not supposed to constitute any 'unlawful restraint of trade.'

"Our title and guarantee companies are trusts and monopolies, and yet they have the express sanction of the State. Even the labor organizations are trusts, and very powerful trusts, who seek to dictate their own terms, not only as to compensation, but the hours of labor. The latter trust has become so powerful that Legislatures and high officials tremble at its power. Of course this is a figure of speech.

"It is difficult to draw the line between illegal and legal trusts. The purpose of the hearing before the Attorney General in the case of the ice trust is to ascertain whether it comes within the condemnation of the law or not. This will require very careful examination and the drawing of nice distinctions to determine whether it falls under the ban of the law or not, and to what extent. It may be legal in the main and illegal in some details that may not be of sufficient moment to warrant the State in acting."

Bicycles on Railroad Tracks.

The question of the right to use a bicycle on railway tracks has just come up for decision. A Minnesota man devised an adaptation of a bicycle enabling its use after the manner of the regular railroad tricycle. The question of the right of the railway company to prohibit the use of such machine is involved. In making answer to the inquiry the commission took the ground that the use of such a machine was in the nature of placing an obstruction upon the tracks of the railroad company, and, therefore, says the *Railway Review*, is expressly prohibited by law.

American Workshops by an English Observer.

At a general meeting of the members of the Ipswich (England) Engineering Society, Mr. H. S. Jeffries, one of the vice-presidents, read an admirable paper, dealing with some American workshops and their machinery, American competition, and other matters. At the outset Mr. Jeffries acknowledged the hearty welcome with which all visitors are received in American factories, and continuing, he said: Generally, all the works throughout struck me as being extremely light, airy, and cleanly kept. Brown & Sharpe's works at Providence, employing some 1600 to 1800 hands, is a model factory in cleanliness, tidiness, and system. The shops, some of which are four stories high, are beautifully light and airy, and well ceiled, and the walls and floors perfectly clean. The tools are painted a nice clean color, in uniform style throughout, and the number and maximum capacity of each tool is clearly marked upon it.

I also noticed in this factory that all the men without exception, were wearing very clean overalls, and I was told that at the end of the week all the men's dirty overalls were left at the works, and that the firm arranged to have them washed for the men, charging them with the cost; of course, in this way, the cost to the men was much less than it would have been otherwise. This arrangement was in no way compulsory, and was instituted solely for the men's convenience. Baldwin's people told me that their experience with electrical driving had been very satisfactory. They found that the cost of the upkeep of the dynamos and motors was about covered by that of the shafting and belting, and in addition to the extra convenience from the separate driving of the various tools they found they could save about 20 to 25 per cent. in boiler power by their being enabled to use large central engines and do away with the shafting and belting and long steam pipes. Their shops, like most American shops, were extremely well served with electric overhead cranes, varying from 5 to 100 tons lifting capacity, and traveling up to 300 feet per minute. These cranes were made by Sellers, the Shaw Co. and the Morgan Co. At the time I was at Baldwin's they, like most of the other American factories just then, were far from busy. The week I was there their wages bill for 3081 men amounted to $39,138, i. e., an average of about $13.25 per man for 60 hours. They were then building locomotives at the rate of about 45 per month. In the ordinary way they complete a locomotive in about three weeks after the boiler comes into the erecting shop.

The system of tool rooms is wonderfully well organized and carried out in the best machine shops in America. I found this system of providing tool rooms had been carried out in many workshops in England and Scotland and I was pleased to observe on a recent visit to Messrs. Reavell's Works at Ipswich, that they had adopted an up-to-date tool room system. In foundry work I saw nothing very new or striking. On repetition work moulding machines are used, made on much the same principle as those we have on this side. I noticed that in nearly all foundries the castings were "pickled" in acid, and there was little or no use made of "rumblers" such as are employed on this side. Beyond the longer life it gives to the tool edges, I personally see no advantage in "pickling" over "rumbling" castings, and there is no doubt that in castings containing many cores, such as engine cylinders, the rumbling is preferable, as by this means the sand cores are loosened and fall out, thus saving the trimmers' work. The labor cost of "rumbling" castings is no more than in "pickling" them, and besides this the expense of the acid is saved. In the forge departments I especially noticed the excellent work that was being done under the drop stamping hammers. The boiler work I saw in the States was certainly not up to the standard of this country.

In one of the large locomotive works, in which otherwise they turned out good work, most of the flanges were done by hand and all the rivet and stay holes punched; the water space stayholes were, however, rhymered on afterwards, when the firebox was riveted into the boiler. Pneumatic tools were used throughout this boiler shop for rhymering and tapping the stay holes and putting in the stays as well as for caulking. I noticed in this shop that in many of the boilers for use in their own country they were putting in steel tubes and steel firebox plates, as is common in the States. In nearly all the works I was in, the standard hours of work were 60 per week, from 7 to 12, and 1 to 6. No Saturday half-holiday. In the majority of the shops there was no hard-and-fast system of piece work or day work; the men made their own individual arrangement with the foreman, as suited them mutually best. There is no restriction whatever on the amount of wages earned, or the output of work, by either master or men, the best men who could turn out the largest amount of profitable work being paid the highest wages, and it was no uncommon thing to see one man working three, four, or even six machines.

The Americans are born improvers, as the American patent records prove. They are always ready to try improvements, and are never afraid of giving a trial to new ideas, and this characteristic is one reason for their success in life; the mere fact of many of these new ideas turning out failures does not discourage them from trying others. Many of our factories here have been established a long time, and, although we cannot pull all our shops completely down and rebuild them throughout, according to the latest ideas, we can keep them properly arranged, and see that our tools are kept up-to-date, and that the work in our factories is properly organized, and that the best methods of working are adopted; and I also firmly believe that the British workman can do every bit as good a day's work as his American cousin, and I see no reason whatever why, with the free use of the best appliances, he should not be able to bring his output up to the latter's level.

Foreign Markets for American Manufacturers.

Preliminary to the work of enlisting interest among Wisconsin manufacturers in the Pan American Exposition which is to be held at Buffalo in 1901, the Wisconsin Board of Commissioners recently appointed by Gov. Scofield is compiling information regarding the opportunities abroad for the introduction of American-made goods. From a mass of correspondence in the hands of the chairman of the board, the *Wisconsin* selects the following paragraphs, which are illustrative of the tenor of the whole:

In Southern Brazil an association is being formed under the name of Socieda de Agricola Pateril do Rio Grande do Sul, with her headquarters in Pelotas. It is intended to serve as a buyer for the members only, and, with this end in view, to import and buy agricultural machinery and implements, besides seeds, breeding stock, etc. The programme also includes the cultivation of experimental fields and the organization of agricultural shows, permanent as well as annual. Here machinery and implements sent by foreign manufacturers are to be exhibited, and, if desired, sold, without extra cost. Manufacturers in this line wishing to enter into negotiations with this association must first send catalogues and price lists to the secretary in Pelotas, in the State of Rio Grande do Sul. Steamers sail regularly from New York to Buenos Ayres, Argentine Republic, and the present freight rate on this class of goods is $8.40 per ton, weight or measurement, ship's option.—*Milwaukee (Wis.) Wisconsin.*

America has three times the number of exhibitors that France had at the World's Fair in Chicago. She occupies 329,052 square feet with her forty-seven distinct exhibition spaces, thirty-three in the main Exposition grounds and fourteen in the Vincennes annex, excluding the ground covered by our eagle surrounding the national pavilion, on the Quai d'Orsay.

Advertisers' Corner.

Advertising is not an exact science. Neither is medicine nor housekeeping. But we rely upon the doctor's opinion because he has given his time and all his ability to the study of medicine. We depend upon our home-makers for limitless comfort and happiness. So also the people who have made a study and a business of advertising, form a class with whom it is profitable to reckon.—*Bates.*

Not one-tenth of the advertisers who are paying out vast amounts of money for space are making use of the wealth of data at hand in their business for the purpose of filling this space. Perhaps this one advertiser out of the ten is shrewd enough to know that he can get better ideas about how to advertise his goods and what to say in his advertisements from his traveling salesmen or from his customers, the dealers, than he can in any other way. We have in mind one advertiser who makes it a point in some way or other to get a shorthand report of the conversation which takes place in some cases when his salesman is selling a bill of goods to a customer who is particularly difficult to handle. In this way he not only gets the arguments pro and con, but also gets his salesman's characteristic expressions which give to his advertisements an air of businesslike reality. We know of another advertiser who makes it a part of his salesmen's business to get all the suggestions they can from dealers as to how he should advertise and sell his goods.—*Advertising Experience, Chicago, Ill.*

It is all right for the advertiser to trace results so far as he is able, but it is impossible for an advertiser to tell positively just how much good a paper is doing him, no matter how carefully his ads are "keyed." The general advertiser cannot avoid a certain amount of duplication of circulation; the reader sees the ad in two or three different papers, and, in answering uses the key number of but one—the one which happens to be at hand when he writes. That paper gets the credit, when in reality it may have been the other two which did the convincing. I believe that "cost and results" tables for this reason often do a great injustice to papers which apparently have failed to pay. An advertisement which does not bring immediate results in orders may be doing most valuable and most necessary missionary work. A man cannot measure the results of his advertising by a yardstick, nor weigh them in a balance. If he expects to see all his returns before the season closes he had better leave advertising alone. The general advertiser must necessarily study papers and the field they occupy, and then spend his money in those most likely to reach the people who are possible customers of his, and not try to hold each paper to too strict an account for a definite number of inquiries.—*W. W. Burch, in Agricultural Advertising.*

A well-known business man in Chicago has this to say about advertising: "I must advertise if I would get results from the men on the road. Before I advertised, my travelers, on entering an office, would be told: 'We are not acquainted with your firm,' and in many cases found they could not secure recognition from the people, but as soon as I began to advertise I had a different experience. My men found it was equivalent to a letter of introduction from a mutual friend. 'Oh, yes, we have noted your advertisement, and feel acquainted with your house.' In this influence alone our advertisement pays, whether we get direct orders or not."

Intelligent retail merchants are more and more conceding the value of the trade paper as an adjunct to their business, says the St. Paul *Trade Journal.* Still, there are those who do not think it worth while to subscribe for or read a trade paper. This latter class are not the progressive or successful merchants of their locality, but eke out a precarious existence, and if failures in business occur, they will be found in the class who eschew trade papers. There is not a single issue of an enterprising up-to-date trade paper which does not give the retail merchant information, exceeding in pecuniary value, ten times the cost of a year's subscription.

In the opinion of a magazine writer the man who aims to sell to people whom he cannot reach personally is the man whose advertising must be the most carefully planned and the most thoroughly executed. He must have a perfect system of following up inquiries. He must never let a man forget him after that man has once shown an interest in his proposition. Orders rarely come with the introduction. They are the result of frequent visits. The more frequent the visit the more likelihood of the reception of an order. It works the same way in advertising as it works in selling through salesmen. A very good advertisement may catch at once; same way with a salesman; but more often the frequent visit of an advertisement, a little different each time, like the persistent salesman, gains the permanent trade.

Success in an advertising way does not always mean massive expenditure, and to the successful advertiser an advertising appropriation is never regarded as an "expense." The advertiser who looks upon his advertising appropriation as an "expense" is a poor one, and soon ceases to be counted a "shining star in the firmament." An advertising appropriation should always be regarded as a producing agent, the same as a profitable salesman to any commercial firm. When that salesman ceases to earn a profit for or becomes an expense to the firm he represents, the expense in the way of salary paid him is either reduced or his services dispensed with entirely, and upon this basis only can advertising be successfully conducted. The failure or success in advertising is the same as the success or failure of a salesman—one salesman cannot earn $15 per week while another can be profitably paid $100. In the former case the appropriation of $15 per week can truthfully be called an expense, while in the latter case the appropriation is an investment of the dividend-paying variety.—*Advertising Experience.*

The reputation of a store, like that of a man, is no mean part of its capital. Honesty is an asset of appreciable value. Any one can afford to be honest at the loss of a good deal of present gain, if for no higher motive than that honesty will yield larger profits in the future. The merchant who, to turn a few dollars quickly to-day, permits the reputation of his store to be placed in jeopardy by any unwise policy, is simply selling a fortune for the paltry sum that he receives—*Trade Magazine.*

Farmers and Long-Time Notes.

An abuse in the agricultural trade that ought to be stopped is farmers' long-time notes. Farmers cannot afford to give notes for the purchase of implements, fertilizers and other supplies, because they can usually get money at less cost. If you borrow $1000 at 5 to 8 per cent. per annum, so as to get the lowest possible spot cash price for whatever you have to buy, you will probably save at least 10 per cent. on your purchases over and above interest. This is far more prudent than to give notes at high rates in payment for goods bought at long prices. Yet many farmers utter the latter form of notes who would hesitate to borrow money at a bank or of a local lender. Both forms of notes are equally an obligation that the farmer must meet. Agents and manufacturers are partly to blame for this abuse, and would gladly welcome any reform that would get the business closer to a cash basis. The latter way of doing business is better for all concerned, as it vastly reduces expenses and losses.—*Orange Judd Farmer.*

Citizen—So your star wouldn't play because she was ill?

Manager—That's it, and I guess if you had seen the box office receipts you'd have been indisposed, too.

RECENT TRADE PUBLICATIONS.

THE ENTERPRISE MFG. CO., of Philadelphia, Pa., 1900 catalogue of patented Hardware specialties. Pamphlet catalogue of 112 pages, printed on good paper and well illustrated throughout, showing their line of Enterprise sad irons, polishing, girls' and toy irons, sad iron handles, sad iron heaters, Enterprise meat and food choppers in all the various kinds and styles, including a bait chopper; power choppers in large variety for butchers' use; sausage stuffers, lard and fruit presses, coffee, spice and drug mills, of which they make an extensive assortment; patent suction and force measuring faucets, including the paint faucet made in the same style; and a self-priming measuring pump, smoked-beef shavers, self-gauging cheese knives, etc. This very desirable line of goods has long been a favorite with the Hardware trade, and it would be difficult to find throughout the United States a dealer who has not handled an increasing quantity of them for years.

THE CHISHOLM & MOORE MFG. CO., Cleveland, Ohio. Pamphlet catalogue of 140 pages, covering their large line of pneumatic hoists, pneumatic and hand power traveling and jib cranes, together with pneumatic tools generally, such as riveters, chippers, drills, calkers, etc. Dealers and users of this class of tools will be greatest interested in the contents of this catalogue. The company manufacture a great variety of differential chain hoists, with automatic brakes, suitable for every possible requirement. A large portion of the catalogue is devoted to their extensive line of door hangers, including baggage car, warehouse, elevator door, etc. Included in the contents are found dumb-waiter pulleys, ceiling or end pulleys, elevator locks, etc. A number of pages give testimonials in fac simile, from the users of their pneumatic tools, together with a number of pages devoted to useful tables, giving weights of materials used by large manufacturers; including tables of the speed of drills, weight and strength of manila cordage and iron chains, melting point of metals, and a table of decimal equivalents, etc. It is altogether a very useful catalogue.

THE JACKSON KNIFE & SHEAR CO., Fremont, Ohio. Illustrated catalogue and price list in oblong pamphlet form of 80 pages, covering their extensive line of fine knives, shears and scissors, razors and tinners' and jewelers' snips. It is well printed on good paper, handsomely illustrated, and covers an extensive line of these goods that are desirable in every Hardware stock in the country. A description is given of each knife, with a cut showing size, etc.; discounts on which will be furnished on application. These are made in all the usual varieties of large manufacturers, from the smallest pen knife to the largest jack knife. Included in its contents is a line of razors under the name of "The Jackson," manufactured from Wardlow's razor steel, made in all the usual points, and with plain or fancy handles as desired.

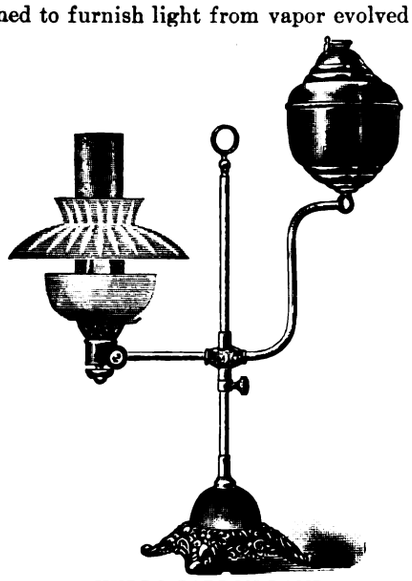
THE SEARLS MFG. CO., Newark, N. J. Pamphlet catalogue No. 17, of 170 pages, covering a large line of carriage and sleigh goods, whip sockets and fasteners, dash and seat rails and mountings, which have for years been made by this company. There is a very extensive line of goods shown, including metal whip sockets in extremely large variety, whip socket fasteners, rails for wood and leather dashes; screen dashes for sleighs, together with the necessary Hardware used in the proper application of the above-named specialties, including top props, prop nuts and joint rivets, collar wrenches, shaft and pole tips, pole crabs and whiffletree tips, etc.

THE PHILADELPHIA COMMERCIAL MUSEUM, Philadelphia, Pa., have just issued two important pamphlets having reference to the world's export trade on "Manufactures of Cotton" and on "Paper and Pulp." These pamphlets, each of them, contain tables of permanent value and other information extremely useful for purposes of reference. W. P. Wilson, Director Philadelphia Commercial Museum, in an address delivered April 25 last, made use of the following language, which would apply equally as well to some of the important branches of the Hardware industry: "We do not realize the immense increase in our facilities for production. At the first call of increasing demand, new factories sprung up and old ones aided in the overproduction. To devote our energies to increasing production without cultivating new market is as foolish as the attempt to lift one's self by his suspenders. Foreign trade is a pressing and immediate necessity. Upon our ability to sell what we make rests our ability to continue a great producing nation. The hum of your factories is to-day a song of triumph, but it may develop into the song of the siren. Let us not show to the world another example of a people intoxicated by success in the present, and so busy with contemplating victories in the past that we can give no thought to the future and take no advantage of the current when it serves."

PLEUGER & HENGER MFG. CO., St. Louis, Mo. Pamphlet catalogue, full size, of 116 pages, of Hardware, plumbing and water works specialties, being their "Hardware catalogue No. 11." It is printed on good heavy paper, and covers the large line of specialties with which this house has been identified for years; including Potts sad irons, common sad irons, Potts laundry irons, polishing irons, and toy sad irons; grind-stone fixtures, well wheels, hay fork and axle pulleys in large variety; shelf brackets, gate latches and door hangers; gong bells, including locomotive gongs; racking, lock, bottling, compression and liquor cocks in large variety; plain and compression bibbs; kerosene, petroleum, water cooler and ale cocks in large variety; chest handles, blind and gate hinges, clothes line hooks and reels; plain and reversible shoe lasts and lawn sprinklers in complete assortment. Included in the pages is a collection of heavy cast iron goods, such as pump fixtures, barn door hangers and rail, truck castors, etc.

RHODE ISLAND PERKINS HORSE SHOE CO., Providence, R. I. Pamphlet catalogue, small size, 28 pages, covering the product of this well-known company. They state that, while they have added no new styles during the past year, they have made several new sizes and have otherwise improved a number of patterns to conform to the most modern ideas on shoeing. The different patterns are illustrated throughout, and the average weight in ounces is given on every size made, and of every portion of their product.

BLACKLOCK FOUNDRY, South Pittsburg, Tenn. Illustrated catalogue in pamphlet form of 24 pages, printed in two colors throughout, and covering a line of sad irons, country and stove hollow-ware, ground and unground; sugar kettles, English pots, cast iron shoe lasts and stands, kitchen and corner sinks, grates, etc. These goods are nicely arranged, properly illustrated and with list prices throughout.

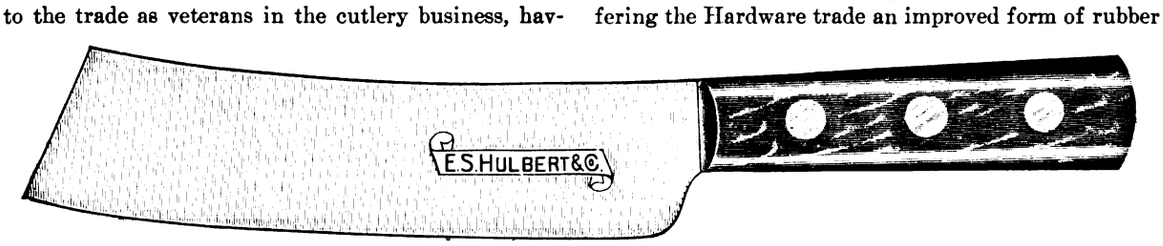


LALANCE & GROSJEAN MFG. CO., 19-21 Cliff Street, New York. A booklet calling attention to the various articles in the line of Agate ware desirable in the way of cooking utensils; calling attention to the merit of Agate ware when used for such purposes. Printed in two colors on coated paper, and intended for large distribution by the trade.

Digitized by Google

NEW GOODS AND SPECIALTIES.

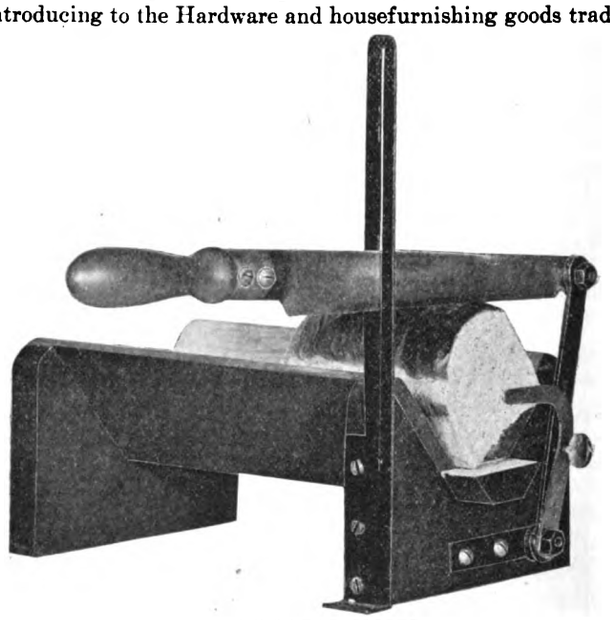
Hydro-Carbon Lamp.



The National Specialty Mfg. Co., Rockford, Ill., are manufacturing a Hydro-Carbon Lamp, as here illustrated, which they desire to call to the attention of the Hardware Trade. It is designed to furnish light from vapor evolved from gasoline. The lamp consists of a tubular frame supporting a reservoir, with a generator to supply the burner below. The operation of the lamp is referred to as being similar to that of gasoline stoves. When burning the gasoline runs from the reservoir through the tube, the lower part of which is filled with wicking to act as a filter and strainer. Entering the generator proper, the gasoline passes into a heated passage, being vaporized and then expelled through a small needle hole at the lower part of the generator. The emerging vapor mixes with air and is burned in a burner similar to the Welsbach, the lamp being first started by heating the generator with an alcohol torch or other source of heat. The company are making 18 different styles, from the student lamp, which we illustrate, to a burner for street lighting purposes. The manufacturers guarantee the lamps for five years as regards materials, construction and mechanical working. They are now prepared to equip dwellings and store buildings with a recently adopted system of lighting by which reservoirs are placed in the basement and the generated gas is piped upstairs through small tubing.

HYDRO-CARBON LAMP.

Family Meat Chopper.

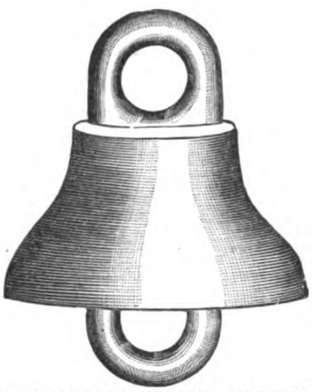


E. S. Hulbert & Co., Bernardston, Mass., who are well known to the trade as veterans in the cutlery business, having been established since 1846, have added to their large line of specialties in the way of cutlery required for restaurant chefs, hotels and for family use, the heavy-bladed meat chopper which we illustrate herewith. The knife is made from finely tempered stock, every blade being hammer forged, and the entire article weighing one pound. They are made in two lengths, 8 and 10-inch blade, and with either cocoa or beech handle. As a family chopper for general purposes, no more useful knife could be found in the kitchen, and the Hardware dealer could add them to his stock with perfect safety. The manufacturers have recently issued a catalogue covering their long line of cutlery specialties, which will be found worthy of a frequent reference in a Hardwareman's library.

"FAMILY CHOPPER," 8 and 10 in. BLADES, COCO AND BEECH HANDLES, WEIGHT 1 POUND.

"Star" Bread Slicer.

Walsh & Many, 224 Champlain Street, Cleveland, Ohio, are introducing to the Hardware and housefurnishing goods trade the novel and unique bread slicer of which we give an illustration. This bread slicer is manufactured from a high grade of steel, and is designed to cut fresh bread with as great readiness as though it were a week old. It is so constructed that the knife may at any time be easily removed when necessary to sharpen, or it could, if found desirable, be used separately for a butcher or steak knife. It is claimed to be the most desirable article on the market for slicing bread, boneless ham, sausages, and vegetables of every description, the ease and manner of its application being among its most desirable features, making it invaluable for housekeepers, restaurants, hotels and public institutions, where such an article is usually in very active service.



"STAR" BREAD SLICER.

Reversible Rubber Bucket.

The Cleveland Galvanizing Works, Cleveland, Ohio, are offering the Hardware trade an improved form of rubber bucket suitable for chain pumps, the style of which is illustrated herewith. The metal link is heavily galvanized, and is made in such a form as to readily admit of the rubber being taken off the link when necessary, and turned inside out in order to increase its durability. It is claimed by the manufacturers that reversing the buckets in this manner expands the rubber

Digitized by Google

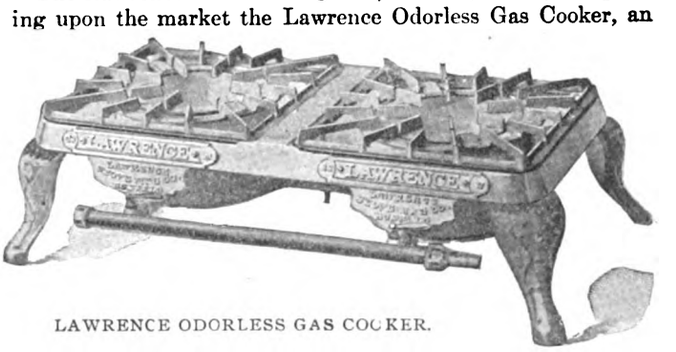
so that it will be enabled to fill the entire space in the tubing, when the opening in the tube or bucket becomes worn to any extent, this increased utility giving double wear and extra service. The bucket is furnished by the manufacturers in both light and dark rubber, and nothing but the best grade of rubber is claimed to be used in its manufacture. The Cleveland

REVERSIBLE RUBBER BUCKET.

Galvanizing Works also manufacture pump chains and purifying cups, but are making a leader of these reversible rubber buckets, and state that to introduce the same a low price will be made one of the features.

Little Giant Brick Handler.

The Logan-Gregg Hardware Co., Pittsburgh, Pa., are general selling agents for the United States for the Little Giant Brick Handler, which is a new device intended in a great degree to supersede the old-fashioned methods of handling brick, avoiding the usual breakage which the use of highly finished brick in modern construction makes an extremely desirable feature. The handler, as will be noted in the illustration that accompanies this, is calculated to hold ten standard bricks,

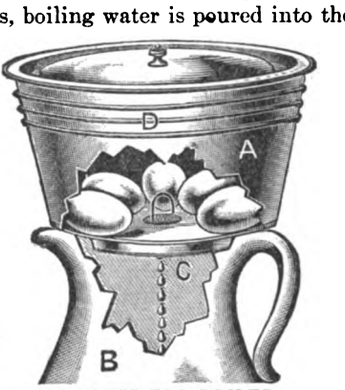


LITTLE GIANT BRICK HANDLER

thus making the counting of the same very accurate and exceedingly simple. It is claimed that one man with one of these handlers will do more work than four men without it; have no breakage whatever, and when the user is a strong man, he can work with a handler in each hand. It is further stated that ordinary men with one handler save 50 per cent. labor, without the risk of breaking. The device can also be used on a hoist, either single or double, and the grip being a perfectly sure one, it is pointed out by the manufacturers there is no possibility of the bricks slipping. The device is recommended by the company for the use of the ordinary handlers of brick around brick yards; also for mill work, and is an economizer of both labor and breakage on all buildings of steel construction, increasing the efficiency and meeting with universal approval.

Lawrence Odorless Gas Cooker.

The Lawrence Stove & Mfg. Co., Buffalo, N. Y., are placing upon the market the Lawrence Odorless Gas Cooker, an



LAWRENCE ODORLESS GAS COOKER.

illustration of which is here given. It is claimed to be the only stove of this description furnished with a combustion chamber, which improvement is regarded by the manufacturers as an extremely desirable one, as all gases are subject to perfect combustion, and brought in direct contact with the cooking utensil, thus permitting no partially burned gas to escape into the room, making it correspond to its name, being perfectly odorless. The supply of air is furnished by a removable perforated bottom, by which it is entirely controlled and admitted to the combustion chamber in accordance with the amount of work it has to do. It is made in three sizes, one, two and three burners.

Peerless Egg Boiler.

The Peerless Cooker Co., Buffalo, N. Y., are placing upon the market the peerless egg boiler, an illustration of which accompanies this article. The boiler is provided with a strainer in the bottom. The marks around the bottom are intended to indicate the quantity of water used when it is desired to boil different quantities of eggs. For instance, in boiling two eggs, boiling water is poured into the boiler until

PEERLESS EGG BOILER.

it reaches the lower mark at the letter D. The cover is then put on, and when the water is all passed through the strainer, it is explained the eggs may be considered as perfectly done. The time required is said to be about eight minutes, but by the use of more or less water in the boiler eggs may be cooked harder or softer, as required. It is claimed by the manufacturers that to boil eggs in a correct manner so as to suit different tastes has always been a difficult problem. They are rarely timed properly, and unless carefully watched they will not be cooked as required. The manufacturers consequently explain that the object of this boiler is to remedy these defects, for if eggs are boiled too rapidly they are not cooked evenly, as the white nearest the surface will be hard and indigestible before the yolk is thoroughly cooked.

"Just Right" Slat Holder.

Clarence F. Chatfield, 200 West 102d Street, New York, is the general sales agent for the Blind Slat Holder, which we illustrate in the several devices given herewith. There will be noticed in Fig. 1 the device, which consists of brass spring

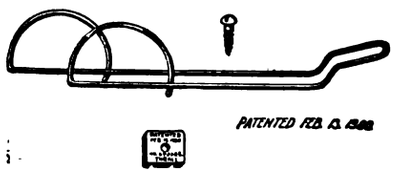

FIG 1.

wire in the necessary form for proper application; has a socket or holder for the lower end and one screw. Fig. 2 illustrates the relative position of the holder and slats when the former has been put in place, showing how it may hold the slats either open or closed, while in Fig. 3 the device is shown applied to inside and also outside blinds, it being necessary to make them in two sizes to meet the different requirements. It is a very simple arrangement, and is designed to hold the slats at various angles, thus preventing the wind from blowing them shut under the pressure of a severe storm, or rattling them in an annoying manner when subject to high winds. It is intended to be marketed at a price as low as ten cents each, and as the device is a patented one, it would seem as though the manufacturer was satisfied that a very large sale could be anticipated under such conditions.

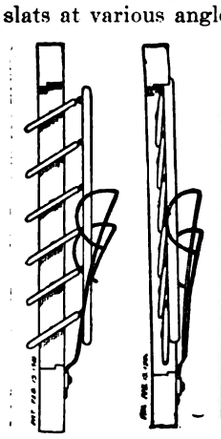

FIG. 2

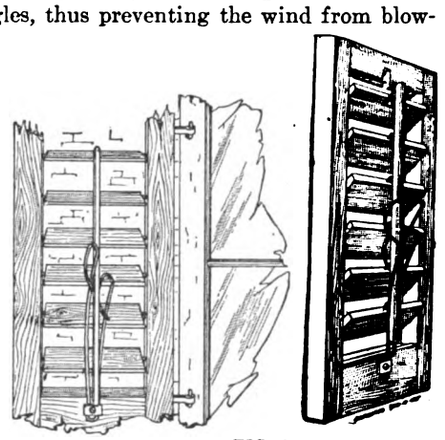

FIG. 3

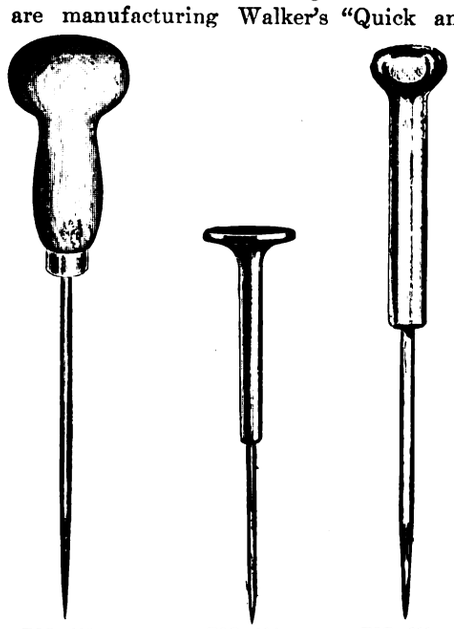
The "Quick and Easy" Icepicks.

Erie Specialty Co., Erie Pa., among their numerous specialties, are manufacturing Walker's "Quick and Easy" wedge-point steel-tempered icepicks, illustrations of a few of the styles we give in this article. They are meeting the popular demand for a serviceable and reliable instrument for the purposes designed, and bid fair to supersede entirely the old-fashioned clumsy contrivances which have held the market for so long a period. No. 113 is designed for use in the butler's pantry or on the sideboard, having a needle point and finished full nickeled. No. 111 is a wedge-point spring pick, full nickeled and will make a good seller for family or general use, and No. 110 is provided with a wood head, to protect the hand when in use, is made from fine superior tested steel, having a needle point and nickeled finish. Altogether, they form a desirable line of seasonable goods, which should meet with a ready sale.



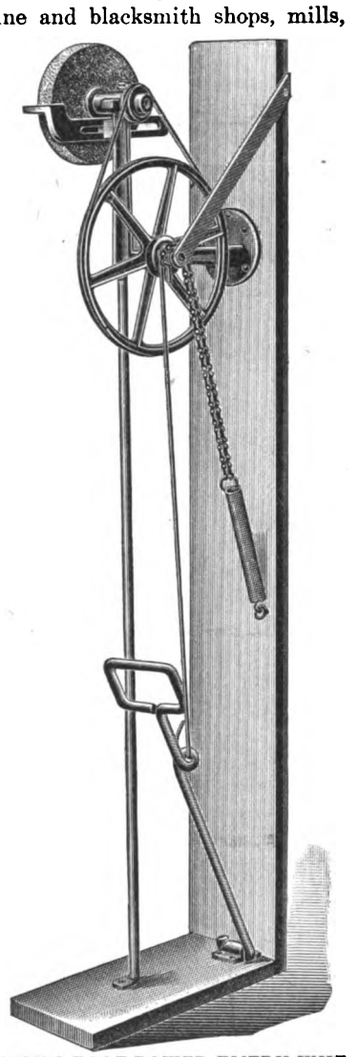


FIG. 110 FIG. 113. FIG. 111.

Reisch's Foot-Power Emery Wheel.

The Buffalo Emery Wheel Co., 24 Lock Street, Buffalo, N. Y., are the manufacturers of Reisch's Foot-Power Emery Wheel, which we illustrate in this column. This machine is intended to fill a well expressed demand for bicycle repairers, machine and blacksmith shops, mills, factories, or, in fact, any other established plant where it is desired to have an appliance of this kind to grind tools, drills or knives that may be needed in the operation of the works. It is a very handy and useful machine for the purpose, and can be operated at 2000 revolutions per minute, equal to 3500 feet. This gives it an exceedingly fine range. The emery wheel is 1x6 inches, and can be had of any special grade of emery desired. The balance wheel is 1-2x10 inches; the pulley is 1-2x2 inches, and it operates on a 1-2-inch mandrel. An oil or grindstone necessary for its use is supplied with the machine by the manufacturers. The machine, when set up for operating purposes, is four feet high, is quite easily put in position, being fastened to either the floor or side wall, and is constructed to work on the clutch principle. Quotations will be given by the manufacturers on solid emery wheels, oil stones or grindstone wheels, and they express their willingness to send one of these machines on trial to any responsible party who may become a possible purchaser. This company also makes emery wheels, grindstones, oil stones and quartz wheels for all manufacturing purposes, and solicits inquiries for the same from those in need of them.

REISCH'S FOOT-POWER EMERY WHEEL.

REVIEW OF THE MARKETS.

Hardware. While the jobbers are doing very well so far this month, the manufacturers have to be satisfied with the usual small supplementary demand, which indicates the closing of the season. The few changes taking place, while not of an important character, do not strengthen the belief that much in the way of advances of current quotations will be a feature of the Fall trade. The American Steel & Wire Co. coming back to their old terms of "60 days or 2 per cent. cash," meets with the general approval of the trade, even if it does compel the reduction of the differential between the prices to jobbers and retailers of 5 cents per keg. It will be noticed that Painted Wire has been still further reduced in price 15 cents, so that the differential is now 30 cents instead of 15 cents, the slight difference previously having made the demand for Painted Wire out of a proper proportion that would materially reduce any overstock of this grade.

Wire Nails. Changes were made by the American Steel & Wire Co. on June 1st affecting the prices, terms and length of contract on Wire Nails. The most important part of the change resulting in a reduction of 5 cents a keg in the price to retailers, and an advance of 2 1-2 cents to jobbers in less than carload lots. The difference now between the jobbers and retailers' prices being 10 cents instead of 15, as before. The most satisfactory change made was in restoring the old terms of 60 days, with 2 per cent. off in 10 days, instead of 30 days, as was previously the case. Contracts now will be accepted for definite quantities, specifications to be furnished, with 60 days from date of contract to make shipments, instead of 30 days, as was formerly the case. Prices will be guaranteed against any decline made by the company, on any undelivered part of the contract at date of decline. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. off in 10 days:

To jobbers in carload lots	$2.20	base.
" in less than carload lots	2.25	"
To retailers in carload lots	2.30	"
" in less than carload lots	2.40	"

New York prices, in consequence of the reduction of 5 cents per 100 pounds at mill, has caused a corresponding reduction in the price to retailers on dock. Small lots from store are also selling from 5 to 10 cents below previous price. Quotations are as follows:

To retailers, carloads on dock	$2.48	base.
" less than carloads on dock	2.61	"
Small lots from store	$2.65 to 2.70	"

Cut Nails. The changes in Wire Nails have not as yet affected the Cut Nail market. The demand is only of an ordinary character, no large sales being reported. Quotations are as follows, f. o. b. Pittsburgh, terms 30 days, 1 per cent. off in 10 days:

Carload lots	$2.05	base.
To jobbers in less than carload lots	2.10	"
To retailers in less than carload lots	2.20	"

New York.—There is a fair demand for Cut Nails noticeable during the past ten days. But orders are confined to limited lots for immediate shipment. Prices remain as follows:

To jobbers in carload lots on dock	$2.23	base.
" less than carload lots on dock.	2.28	"
To retailers in less than carload lots on dock.	2.41	"
Small lots from store	2.50	"

Barb Wire. On June 1st the American Steel & Wire Co. announced a change in price on Barb Wire, which reduced the price on Painted Wire 15 cents per 100 pounds, and increases by so doing the differential in price for Galvanized, making it 30 cents; the price remaining as heretofore quoted. In less than carload lots, jobbers are now charged an advance of 5 cents, instead of 2 1-2 cents per 100 pounds, as formerly ruled. Sixty-day contracts will be accepted, and price guaranteed against any decline by the company. Quotations for domestic trade are as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	$2.50
" " Galvanized	2.80
To jobbers in less than carload lots, Painted	2.55
" " " Galvanized	2.85
To retailers in carload lots, Painted	2.60
" " Galvanized	2.90
To retailers in less than carload lots, Painted	2.70
" " " Galvanized	3.00

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the foregoing prices.

Plain Wire. The changes announced June 1st by the American Steel & Wire Co. embraced Plain Wire as well. The price to jobbers suffers no change, except the advance of 2 1-2 cents per 100 pounds for less than carload lots. The price to retailers being reduced 5 cents per 100 pounds makes the difference between jobbers' and retailers' carload price 10 cents per 100 pounds, instead of 15 cents as before. Terms and length of time for which contracts will be accepted have been extended to 60 days. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. discount for cash in 10 days:

	Base sizes. Plain.	Galv.
To jobbers in carload lots	$2.15	$2.55
" less than carload lots	2.20	2.60
To retailers in carload lots	2.25	2.65
" less than carload lots	2.35	2.75

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the advances indicated in the following table:

PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS).

Nos.					Galvanized.
6 to 9	Base				$0.40 extra.
10	$0.05	advance	over	base	.40 "
11	.10	"	"	"	.40 "
12 and 12½	.15	"	"	"	.40 "
13	.25	"	"	"	.40 "
14	.35	"	"	"	.40 "
15	.45	"	"	"	.75 "
16	.55	"	"	"	.75 "
17	.70	"	"	"	1.00 "
18	.85	"	"	"	1.00 "

For even weight bundles, 50 pounds and over, advance price 5 cents per bundle on above.

Cordage. The market for Rope is without vigor, and prices are by no means strong. The demand is far from brisk and quotations that follow may be said to represent the market, with a rebate of 1-4 cent for carload lots:

	Pounds. Cents.
Manila, 7-16 inch and larger	13½
Manila, ⅜ inch	14
Manila, ¼ inch and 5-16 inch	14½
Sisal, 7-16 inch and larger	9
Sisal, ⅜ inch	9½
Sisal, ¼ and 5-16 inch	10
Sisal, Lath Yarn, Medium and Coarse	9

Manila Tarred Rope, 15 thread, is quoted at 14 cents, as is also Manila Hay Rope, Medium.

Binder Twine. The following quotations are made on Twine, f. o. b. New York, Philadelphia or Boston, with a reduction of 1-4 cent per pound for orders less than a carload lot and over 10,000 pounds, and a reduction of 1-2 cent per pound for carload lots:

White Sisal, 500 feet to pound	10½ cents.
Standard, 500 feet to pound	10½ "
Manila, 500 feet to pound	13½ "
Pure Manila, 650 feet to pound	14½ "

Linseed Oil. Dean Linseed Oil Co., under date of May 31st, quote as follows:

In lots of less than 5 barrels..... 68 cents per gallon.
In lots of 5 barrels or more..... 67 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.
Boiled linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 76 cents per gallon.

THE PHILADELPHIA TRADE.

The month of May has closed with a satisfactory amount of business, sales being somewhat in excess of those of the same month last year. This is particularly gratifying in view of the state of the market, while the assortments ordered indicate that stocks are somewhat broken, and that a fair consumption is taking place.

Of course this time of the year the demand is mostly for seasonable goods, and the warm weather is making a demand for screen wire, window and door screens, agricultural implements, freezers, etc., that is of considerable volume.

It is a little too early in the season to prophesy for Fall trade, and, while on some goods which have advanced radically—perhaps excessively—there is a tendency to modify prices, still we constantly hear manufacturers complaining that the firmness of raw material is handicapping them, and that it is impossible to make goods at present prices at a profit. This is particularly true of goods which lie near the raw material.

Collections seem somewhat improved, and as the season of the year is now approaching when farmers begin to realize from their sales of produce, a still further improvement is confidently expected, while from manufacturing centers we hear reports of ample employment and a large volume of money being paid out for wages. This is constantly increasing the purchasing power of the community, thereby steadying the market.

We think that, while most of the dealers are inclined to purchase conservatively, many would be surprised if they would carefully compare their purchases of to-day with their purchases of a year ago. We are quite confident in saying the difference between the two amounts will not seem so great as might be expected. What we mean by this is, it is absolutely necessary to have a stock of goods if one wishes to continue in business, and we think the average dealer will be surprised to see how many are his daily wants, even under most conservative management.

BIDDLE HARDWARE CO.

THE PITTSBURGH TRADE.

May was a very busy month in the Pittsburgh Hardware jobbing trade; in our own case the heaviest month in our experience.

We hear of dull trade among some manufacturers, but it only means giving time for the country to absorb the excessive stocks bought last year. A little patience exercised by the manufacturer while this process is going on will be of advantage to all concerned.

If manufacturers try to force goods on the market before they are actually needed, they will only be taken at a sacrifice. A falling market causes timidity and small purchases. When the manufacturer feels that his prices are right, based on cost of material and labor, we prefer to have him hold prices firm.

We were very glad to receive notice June 1 from the Wire & Nail Co. of a restoration of the old terms—60 days or 2 per cent. 10 days cash. It has been quite a hardship on jobbers who have been allowing this cash discount to their customers to have had to pay net cash for several months, and

Digitized by Google

1 per cent. cash for the past few months. This 2 per cent. cash discount has become established in the Hardware trade by long usage, and the general verdict is that it is a valuable method of determining credits. It is more than interest on the money for the anticipated time; it is premium on prompt payment that the solvent merchant cannot afford to let slip. We sincerely hope that all the manufacturers who have during the past year made their terms net, will restore the old 2 per cent. cash 10 days, as the Wire & Nail Co. have done.

LOGAN-GREGG HARDWARE CO.

THE CLEVELAND TRADE.

There is a great diversity in quotations at present, indicating the stage of fright in different minds; waiting a little would seem advisable with a careful consideration regarding probabilities. That a general decline equalizing the advance on goods is to come is improbable. Increase in the amount of money in circulation; increase in wages and the foreign outlet for our surplus will prevent the low range of prices that prevailed in '98. There are many manufactured goods that cannot decline because the advance has been small on them. Others that have materially advanced have already declined, and when the alarm subsides and the unloading is completed, it will be found that goods cannot be furnished at '98 prices; the foreign demand will help to prevent the surplus and the decline in price will increase this demand.

Unrecognized forces have such a potent influence on controlling conditions that predictions may be unreliable, but a careful analysis of conditions is the only valuable insight.

History may not repeat itself, but it is more than likely to do so, although Charles Kingsley, upon resigning his professorship of history at Oxford, gave as a reason that history was mostly a lie. If this is so, it is because all the factors have not been considered; it depends so much upon who writes history.

In a recent history of this country, the author makes a formal argument, to show that the Civil War might have been prevented, only for a few Northern fanatics, but he does not analyze the cause that produced the fanatics.

Indications are strong that 1901 will fulfil the promise that 1900 fails to verify. It is not at all probable that we are to go through a long serious depression, unless evil prophets win the confidence of the country. To tell a man he is sick helps make him so; to publish all men as rascals helps make them so. Prophets of evil may be useful, but they are the microbes of business.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE MINNEAPOLIS TRADE.

Locally, we need rain. It has been exceedingly dry throughout the whole Northwest this spring, only about one-tenth usual amount of rain for May, but we learn of showers generally through the district tributary to the Twin Cities. There is no question but a general rain is needed. That, however, would not save the hay crop. Farmers are complaining about their pastures being dried up, and on account of the low state of water, the mills could not be supplied with logs and were obliged to shut down for a few days. With the exception of this trouble, matters generally are in a very prosperous condition. Trade and collections good. Prices all right generally. Same old trouble with nails and sash weights. Quite a lot of building. Several business blocks started and many houses and flats. Largest number of building permits in May since 1891. W. K. MORISON & CO.

THE CHICAGO TRADE.

We were very agreeably surprised in footing up the sales for the month of May to find they were considerably in excess of the same month's sales one year ago. As a part of our regular city business was cut off because of the various strikes in Chicago, we are led to believe that the farming classes and the small country towns throughout the Northwest are in a very prosperous condition. One line of goods in particular that we have enjoyed a regular boom in has been

the sale of plain and barbed wire. When the American Steel & Wire Co. made a reduction in their price of about 33 1-3 per cent. on wire and nails, it seems that the Western jobbers were not satisfied with that, but voluntarily declined jobbers' prices about 5 per cent. still lower than the best factory prices in small lots. Retailers have taken advantage of a good thing when they saw it and have sent in so many orders to us that the steel and wire mills have not been able to come anywhere near filling our orders as fast as our men could take them. We are also enjoying a fine large business in screen doors, window screens, ice cream freezers, poultry netting and wire cloth. Some of the jobbers have not been able to secure from the manufacturers their full requirements of wire cloth, and as we had an extra supply of 28 and 30 inch, we have been able to help out some of our jobbing friends with these two sizes, which has made our trade in wire cloth this spring much larger than usual. We are anticipating a fine month's sales during the next 30 days.

WELLS & NELLEGAR CO.

THE ST. PAUL TRADE.

Our section wants rain, wants it probably worse than any other one thing. We have had less moisture during last month than any May since a record has been kept, something like thirty years, and unless there is a change ere long the condition will become very serious.

Though orders are plentiful and aggregate a nice amount, they run small, something like the catch of an honest fisherman; prices are somewhat demoralized, the jobber is evidently unloading, anticipating possible declines by manufacturers, which may not materialize. Everybody is swearing at J. W. Gates and laying on his head the present unpleasant condition of uncertainty—how much should actually belong to him we are not prepared to say, but surely his action resulted in implanting in the mind of all a feeling of uncertainty as far as values are concerned—but we are philosophically inclined and believe all will be well sometime in the future, in the meantime we are doing a good business and fairly happy.

Mentioning fishing—when your editor, Harry Hopkins, was a young man traveling for Brown, Harris & Hopkins, the writer was the boy who dug worms so that he, Hopkins, could go fishing with the boss. Harry made a good salesman, and if he had stuck to it might have become quite a Hardwareman, instead of an editor, even if it is of as good a paper as HARDWARE, but time has rolled along and brought great changes and the former traveling man and boy to dig worms have experienced theirs.

Wishing and hoping for rain and a more satisfactory market.

C. W. HACKETT HARDWARE CO.

THE OMAHA TRADE.

Trade is holding up in most excellent volume for the season of the year, and the unsettled condition of the market, so far as prices are concerned, has no apparent effect on the volume of business. The reduction in price of Nails and

Digitized by Google

Wire appears to have had considerable effect in increasing the demand for these lines, and the shipments have been remarkably heavy for a season of the year when farmers are all busily engaged in their work and little demand is made from the country for this class of goods. Season goods are moving in good shape, the demand for wire cloth, screen doors, poultry netting, refrigerators and season goods of all kinds being fully up to the average. There is apparently an uneasy feeling on the part of the retail trade regarding the future market, and on this account many of them are crowding their stocks very little, with the result, perhaps, that what they save in the way of a reduction in price they lose on sales, which they fail to make on account of the fact of not having the goods on hand. Collections are a little below the average. RECTOR & WILHELMY CO.

THE SAGINAW TRADE.

Believing it would be of interest at the present time, we inclose you herewith a memorandum of the market on Wire Nails since the American Steel & Wire Co. was formed:

MARKET PRICE OF NAILS—1898, 1899, 1900.

12-22-98	$1.25	5-31-99	$2.25
12-30-98	1.35	7-15-99	2.50
1-26-99	1.50	9- 1-99	2.65
2- 6-99	1.60	9-11-99	2.80
3- 1-99	1.85	10-17-99	2.95
3-11-99	2.00	12-30-99	3.20
4-15-99	2.10	4-21-1900	2.20
4-21-99	2.20		

It is interesting to note comparison of prices from April 21st, 1899, to April 21, 1900. Our business for the first three weeks in May was inclined to be quiet, but for the last week of May and June to date, a bright sky seems to have put a new stimulus into trade. MORLEY BROTHERS.

THE DAVENPORT TRADE.

The American Steel & Wire Co. have very graciously conceded to the earnest demands of some of the jobbing trade a cash discount of 2 per cent., instead of 1 per cent. They have also reduced the margin of profit that was heretofore accorded the jobber of 5 cents per 100 pounds. It is true that the 1 per cent. conceded in cash discount on nails amounts to only 2 1-2 cents per 100 pounds, and therefore the hitherto unhappy jobber makes just 2 1-2 cents less per keg on his nails than before the concession, yet he nevertheless has had his own way, even if it has cost him 2 1-2 cents per 100 pounds, he is now both contented and happy.

It is not a question of price now on nails and barb wire, but a question of getting enough of these articles to fill orders.

The Iowa Hardware Jobbers hold their regular annual meeting at Burlington on the 6th inst., and will elect officers for the coming year. We anticipate a most harmonious meeting and a good time generally. These meetings are always well attended and result in continuing the friendly feeling which exists among its members, and incidentally increasing the profits of the Iowa Hardware Jobbers.

SICKELS, PRESTON & NUTTING CO.

THE SAN FRANCISCO TRADE.

Dealers in Builders' Hardware are feeling better than they did a month ago, owing naturally to a revival of business, a condition of inspiration that seems to have come into this port within the past fortnight, close after the bosses and union workmen of the Carpenters and Builders' Association came together and adjusted separating differences by advancing the daily wage of carpenters from $3 to $3.50. At several prominent retail stores current numbers of the daily sheet of builders' contracts recorded were shown HARDWARE'S correspondent as evidences of a condition markedly unusual—the advent of a summer season showing the reverse of a business lull.

To-day's issue of Magee's Real Estate Circular reports for May local realty sales amounting to $1,920,930, the sales numbering 321. And then, further on, with a reference to wholesalers along trade lines in whose interests HARDWARE is enlisted, says: "The demand in May for business property was not confined, as it heretofore frequently has been, to retail property on or north and west of, and close to Market street. The wholesale districts on Mission or on the other streets, from Fremont to Steuart, and between Market and Mission, where Miller, Sloss & Scott are erecting their immense wholesale Hardware house—the vicinity location also of the Dunham, Carrigan & Hayden Co., W. T. Garratt & Co., Whittier Coburn Co. and other large concerns, were included in the demand, as well as the factory and warehouse district, from Mission to Folsom, and from First to Steuart streets. San Francisco, is growing, despite dry years, plague scares and high taxes, and its wholesale and factory district will not continue to be confined to its present limited quarters."

The word plague in the above quotation reminds one of a lot of fake stuff that has been published of late to the great detriment of the wholesale and jobbing business of this city. What is widely reported as the freak, or yellow journal of this city, is credited with having originally started the fake story of bubonic plague in San Francisco and naturally

Why try to stick things with something that doesn't stick? Buy **MAJOR'S CEMENT;** you know it sticks. Nothing breaks away from it. Stick to **MAJOR'S CEMENT.** Buy once, you will buy forever. There is nothing as good; don't believe the substituter.

MAJOR'S RUBBER and MAJOR'S LEATHER.
Two separate cements—the best. Insist on having them.
ESTABLISHED 1876.
15 and 25 cents per bottle at all druggists.
MAJOR CEMENT CO., NEW YORK CITY.

SOLD BY ALL HARDWARE DEALERS.

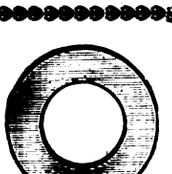
enough, interior papers, in order to keep trade at home in their localities and away from this trade centre, have assumed seriousness in republishing the alleged faker's fake. And although the New York *Herald* and San Francisco *Call*, through their famous New York specialist, Dr. George F. Shrady, have failed to discover a case of plague, merchants held meetings the first two days of this month and contributed $50,000 to asist the city's health authorities in their determined plan to have a thorough Spring house cleaning inaugurated in Chinatown. At this merchants' meeting A. A. Watkins, of W. W. Montague & Co., was presiding officer, and the following members of the trade were placed on most important committees: A. L. Scott, of Miller, Sloss & Scott; Mr. Carrigan, of Dunham, Carrigan & Hayden, and Wakefield Baker, of Hamilton & Baker. And to the $50,000 fund these firms severally subscribed from $500 to $1000.

On the evening of June 1st a new local organization, entitled the Lodge of Amalgamated Sheet Iron and Metal Workers was formed, with a roster of 125 men. Thirty members of the Cornice Makers' Union performed the ceremonies of installing the following selected officers: Hugh D. de Gear, president; W. Lundy, vice-president; H. W. Street, recording secretary; K. K. McLoughlin, financial secretary, and H. W. Heutcheroft, treasurer.

The Lloyds Scovel Iron Co. was incorporated June 1st by Charles Lloyd, Isaac Kennedy, George S. Scovel, George O. Rich and M. M. Gillespie, with a capital stock of $50,000, of which $12,500 has been subscribed.

TRADES PRESS ASSOCIATION.

By The By!



"For the last ten years," said a curio dealer in the Old Quarter, "a broad-bladed dagger with an imitation bronze handle has been lying among a lot of odds and ends in that corner showcase. I don't know its history and can't even remember where it came from, but I probably got it when buying some collection en bloc. At any rate I never found a customer for it, and the other day, while looking over my dead stock, it occurred to me it might be burnished up and used as a paper knife. I took it out, scraped the handle a little to see what it was made of, and then laid it on my desk to attend to a customer. When I picked it up again I was astounded to find the blade dripping with blood. It seems a childish thing to tell, but the incident was so grewsome and apparently inexplicable, that it set me trembling like a leaf. In a moment, however, my common sense came to the rescue and what proved to be the correct explanation flashed into my mind. It was a trick dagger, for use either on the stage or in some secret society mummery, and the hilt contained a hidden reservoir for artificial blood. In scraping the side I had pressed a spring which opened a little valve and out came the gore, still fluid, after all these years. I afterward found that the top unscrewed for replenishing the supply. It was the only thing of the kind I have ever seen, and I gave it to a friend who has a fine collection of arms."—*New Orleans Times-Democrat.*

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Abbeville, La.—The Vermilion Hardware & Implement Co. has been organized by the following parties: E. M. Stebbins, J. A. Summers and D. L. McPherson. It will be open for business on June 1.

Brighton, Vt.—The Bosworth Store Co. has been incorporated to do a Hardware business. Capital, $10,000. Incorporators: A. W. Bosworth, Lilia J. Bosworth, E. M. Bartlett, P. H. Dale, all of Island Pond.

Coeur d'Alene, Idaho—A. P. Perrenoud.

Edwardsvile, Pa.—John J. Jenkins has opened a branch hardware store on Church Street.

Farmington, Me.—Judkins & Ames.

Laurens, N. Y.—D. W. Grannis, of Bangor, Franklin county, has leased the H. B. Dummes store, and will open about July 1st with a general stock of Hardware.

Milford, Conn.—Walter M. Irving, the Hardware dealer, has leased the store room recently occupied by Goodwin & Co., the jewelers. He will use it to display farming implements.

Millers Falls, Mass.—Guy Frost.

St. Louis, Mo.—The Sligo Iron Store Co. has been incorporated to do an iron and Hardware business. Capital $400,000. Incorporators: C. R. Blake, T. P. Conant, G. A. Johnston, H. L. Beer, L. Blake, C. D. Blake, all of St. Louis; Mary C. Wise, of Alton, Ill.

Norfolk, Va.—The Paul R. Howard Hardware Co. has been incorporated with a capital of $50,000. Officers: Paul R. Howard, president and treasurer; Robert W. Lamb, secretary; P. R. Howard, R. W. Lamb, L. H. Wilkinson, E. K. Howard, S. C. R. Lamb and I. S. Moss, directors.

Walton, N. Y.—The L. E. Hoyt Co. has been incorporated with the secretary of state, to deal in iron, Hardware, machinery mill and railway supplies. The capital stock is $30,000, and the directors for the first year are Lindley E. Hoyt, Marcus J. Stanton and Edwin J. Brooks, of Walton; Arthur Pierson, of Apex, and David W. Lewis, of Rock Royal.

Waterloo, Ia.—The Cutler Hardware Co. has been incorporated to do a Hardware business. Capital $80,000. Incorporators: F. E. Cutler, G. W. Huntley, both of Waterloo.

Changes and Improvements.

Alger, O.—J. D. Sims has remodeled his rooms for the Richey Hardware store.

Cameron, W. Va.—Walter Spragg has disposed of his interest in the Hardware store doing business under the firm name of J. I. Spragg & Co., to J. I. Spragg, who will continue the business at the old stand.

Columbia, S. C.—The Spartan Hardware Co., with Mr. Henry Beacham, manager, have purchased the business of W. C. Cannon, on the square, and will continue in this line.

Lake Minnetonka, Minn.—R. H. De Groodt & Co. have moved their Hardware stock from their former location to one of the stores in the new Miller block on Water Street, Excelsior.

Leeds, N. D.—Iverson & Hillman, who some time ago bought the Hardware stock of Peter Madsen, have taken charge of the same.

Montrose, Pa.—The Hardware firm of Boyd & Cooley has been succeeded by the firm of Cooley & Son, Harry E. Cooley becoming associated with his father in the business.

New Haven, Conn.—A certificate of a decree of the Superior Court of New Haven County, changing the name of the Buckingham, Clark & Jackson Co. to "The Buckingham Hardware Co.," has been filed with the Secretary of State.

Packwood, Ia.—David Roth has bought John Snyder's partnership with Baker & Co., Hardware merchants, and Messrs. Baker & Roth have bought William Snyder's share of the Hardware firm of Snyder & Watson, and the prospects are that Mr. Watson will sell to them, which will give to Baker & Roth, one of the largest Hardware firms in the county.

Pennsburg, Pa.—Dr. James G. Mensch has sold his Hardware business to W. H. Renninger and Granville Gerhart. The new firm intends to remove the business to Dr. Mensch's tenant house nearby, as soon as the building has been remodeled.

Perrysburg, O.—John J. Amon has purchased the three-story brick building occupied by R. Danz's bakery and will move his stock of Hardware into the same in a few weeks.

Phoebus, Va.—William Shaffer has moved his Hardware and paint business to the store formerly occupied by Marcell Weber.

Schenevus, N. Y.—J. L. Hubbard has begun excavating the cellar and foundation for his new Hardware store on the corner of Main and Arch streets.

Shelbyville, Tenn.—Woolsey & Evans, Hardware merchants, have established a branch house at Bell Buckle.

Tunkhannock, Pa.—Bert Billings and John Ryan, of this place, have purchased the stock and good will of the Globe Hardware Co. of Montrose and will take charge of the business at once.

Watertown, N. Y.—H. S. Arthur has succeeded the firm of Howard & Arthur in the Hardware business.

Weeping Water, Neb.—Sackett Bros., for many years employed in the Hardware business at this place, have sold out to Robinson Bros. One of the new firm is from Lincoln and the other from South Dakota.

Wenham Depot, Mass.—Mr. Goodhue, the Hardware dealer, has moved from the building he occupied, on Willow Street, to one of the stores in the block on Main street.

West Somerville, Mass.—E. S. Sparrow, proprietor of the well-known Hardware store at the corner of Highland Avenue and Elm Street, is preparing to make radical changes in the property. The floor will be dropped nearly to the street level and the building enlarged so as to cover the vacant strip of land on Highland Avenue. New plate glass windows will be put in, and many other alterations made that will make the building and store thoroughly up to date.

Business Embarrassments.

Birmingham, Ala.—Thomas H. Herndon and Pomfrett L. Herndon, partners under the firm name of The Herndon Hardware Co., in the District branch of the Supreme Court of the District of Columbia, have filed a petition in voluntary bankruptcy. Their joint summary of debt is stated to be $3,763.11.

Cleveland, O.—Henry G. Herrick, Hardware dealer, has filed a deed of assignment in the insolvency court. He estimates his assets at $5000, with liabilities at $4500. Alex C. McKenzie is assignee.

New Hope, Pa.—Cook & Johns, proprietors of the leading Hardware and house furnishing store of this village, have made an assignment for the benefit of their creditors.

Sheboygan, Wis.—G. Louis Krause, Hardware merchant, has filed a petition in bankruptcy. Liabilities $4048; assets $7000, including exemptions.

Terre Haute, Ind.—R. R. Teel & Co., Hardware dealers, have filed a petition in bankruptcy, with $4012.40 liabilities and $2688 assets.

Burglaries in Hardware Stores.

Dilion, Mont.—Dart Hardware store, guns.

Elkins, W. Va.—James Hanley, pistols.

Hammond, La.—T. S. Baltzell, $40.

Fires in Hardware Stores.

Beachmont, Mass.—Carpenter Bros'. Hardware store has been destroyed by fire. Loss $1000, insured.

Bristol, R. I.—The Hardware store of William H. Munro has been damaged by fire.

Everest, Kan.—J. B. Lyon's Hardware store has been destroyed by fire.

Greenwich, Conn.—The Hardware store and carriage repository of John H. Ray & Son has been destroyed by fire.

Mayville, N. Y.—T. H. Hutson's Hardware store has been destroyed by fire.

Moira, N. Y.—W. S. Lawrence's Hardware store has been damaged by fire.

Mt. Vernon, Tex.—Hill & Morris' Hardware stock has been damaged by fire to the extent of $1500; insured.

Purcellville, Va.—The Hardware store of Calvin Forbes has been destroyed by fire.

Shipshewana, Ind.—George Ort's Hardware store has been destroyed by fire.

St. Paul, Neb.—F. W. Rincker's Hardware store has been damaged by fire.

Arcade Files are the Best

I KNOW FOR I USE THEM

Our assertion that Arcade Files are the best is not a mere figure of speech intended to catch the eye. They really ARE the best—they cut faster, wear longer and represent a better value for the cost than any other file made; and are equal in every respect to the best English hand cut files—because they are made of the best steel that money will buy, and are finished with Weed's Patent Increment Cut, which produces a surface so exactly resembling the hand-cut work that no one can tell the two surfaces apart. If you have never used Arcade Files, send us a trial order, to be returned at our expense if not exactly as we claim. The best mechanics use them and prefer them to any other make for the reason that they cut faster and last longer than any other file on the market.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Albany, N. Y.—The Albany Saw Co. has been incorporated, with a capital of $2000, to manufacture and sell saws, particularly meat saws. The directors are William B. Mix, A. H. Spierre and L. H. Burdick, all of this city.

Bakerville, Tenn.—The machinery for the new axe handle factory at this place has arrived and will be put in operation as soon as possible. This will give employment to several. A large number of hands are now at work in the woods getting out timber preparatory to be hauled to the factory.

Bayonne, N. J.—The Barnes Lock & Foundry Co. has been incorporated. Hardware foundry. Capital $30,000. Incorporators: D. Nunan, J. B. Cowper, F. C. Mahnken, E. Stagg, all of Bayonne.

Binghamton, N. Y.—The Ryder Mfg. Co. has been incorporated, to manufacture gas heated flatirons. Capital $5000. Directors: Charles A. Ryder and Charles E. Lee, of Binghamton.

Camden, N. J.—The M. W. Lee Automatic Jacquard Card Cutting Machine Co. has been incorporated. Tool makers, etc. Capital $500,000. Incorporators: M. W. Lee, A. J. Bull, L. J. Bamberger.

Chicago, Ill.—The Wing Mfg. Co. has been incorporated. Capital, $15,000. Manufacturing and dealing in Hardware. Incorporators: Peter G. Wing, W. H. Sedgewick, F. W. Gans.

Chicago, Ill.—The Eureka Digger Co. has been incorporated. Capital $2500. Manufacturing post-hole diggers and Hardware specialties. Incorporators: Alexander Bauer, H. S. Hardy, Tucker Hardy.

Detroit, Mich.—The Michigan Mica Co. has been organized for the purpose of mining mica and carrying on the business connected therewith at Dillsboro, N. C. The capital of the company is $350,000.

Detroit, Mich.—The Voelkner & Reineke Mfg. Co. has been incorporated. Manufacturing and sale of Hardware specialties. Capital $20,000. Incorporators: H. A. Voelkner, C. Reineke, W. Shirray, all of Detroit.

Indianapolis, Ind.—The Standard Tack & Brad Co. has been incorporated, with a capital stock of $20,000. The directors are Jesse Atherton, Charles F. Lewis, Daniel A. Chenoweth, Henry Kothe and W. F. Henley, all of this city.

Kansas City, Mo.—The Economy Gas Lamp Co. have filed articles of association with the county recorder. The company will make gas lamps and gas fixtures. The capital stock is $40,000. The stockholders are M. M. Sweetman, Robert M. Snyder, William D. Snyder, J. P. Dawson and James W. King.

Little Valley, N. Y.—The George W. Korn Razor Mfg. Co. has been incorporated. Capital $25,000. Directors: George W. Korn, of Chicago, Ill., and James N. Norton, of Salamanca.

Changes and Improvements.

Clayville, N. Y.—The old Paris furnace property, belonging to the J. M. Butler estate, has been leased by William J. Millard and Charles T. Pratt. Messrs. Millard & Pratt intend to convert the plant into a factory for the manufacture of hoes and forks. Employment will be given to about 75 men.

Lowell, Mass.—The works of the Fifield Tool Co. on Marginal Street are being enlarged by an addition 50x120 feet in dimensions, for heavy machinery, and for the erection of machinery. In this addition the company is placing two of the heaviest planers in this section of the country. The addition is on the westerly side of the present works. The extension has been made necessary by the extraordinary demand for the heavier class of manufacturing.

McKeesport, Pa.—The National Tube Co. has begun the demolition and removal of the great charcoal iron works in its McKeesport plant and of the No. 2 puddle mill. The plant is to be removed to Riverton, and the removal and rebuilding will mean an expenditure of several hundred thousand dollars. The removal is necessitated by the increased business of the company demanding more room at the main plant. The ground now occupied by the charcoal iron works will be utilized in mammoth extensions of the finishing departments of the tube works.

Middletown, Conn.—E. L. Stine, representing a New York company, has purchased a factory site opposite the factory of the Keating Wheel Co. It is ample for a factory 160x75 feet and has advantages of railroad connections by spur tracks. Mr. Stine will immediately arrange for the erection of a factory for the manufacture of enamel and tinware. It is understood that the factory will be one story high, of brick and sufficiently large to allow for the growth of the business.

New Haven, Conn.—The Challenge Cutlery Co. have just purchased lots on Seymour Street, which, with the 90 feet purchased some time ago, gives them a frontage of 190 feet on that street. The company are arranging for the erection of a large factory building on the site, their business having outgrown their present quarters. The new factory will be 190 feet long, three stories high, of brick.

New York, N. Y.—The Columbia Tool Co. has leased the factory building owned by C. H. Nightingale, on East Fourth Street, Plainfield, N. J., and will establish its factory there as soon as the proper alterations can be made.

Ottawa, Ont.—Work has been started on a new brick building for the Ottawa Saw Works. It is being put up by the Ottawa Investment Co. The new building will be a brick structure, two stories high, and 95x97 feet. It is the intention of the Saw Co. to operate on a larger scale than before.

Rockford, Ill.—The Emerson Mfg. Co. have within the past six months completely remodeled and very materially enlarged the capacity of their already extensive plant devoted exclusively to the manufacture of agricultural implements. The arrangement of the machinery in the various shops is now such that much of it, such as elevators, cupola blowers, fans, various foundry apparatus, and some of the heavier shop machines, are operated by individual motors, other departments and the lighter machines being operated by a group drive, each group of machines being operated by a single motor.

Wallingford, Conn.—Barden Bros., late of Granville, N. Y., have purchased the entire plant, including water right, land, machinery, etc., of the Batcheller Mfg. Co., which they have converted into a scythe factory. Since the purchase they have been at work putting in new machinery until now they have about thirty men at work making scythes exclusively. Later on it is their intention to move the Granville machinery for the manufacture of Hardware specialties under the same roof, as they have abundant room, and power that will cost but a trifle compared with the cost in Granville.

Wilmington, Del.—R. C. Purvis, of Laurel Springs, N. J., has purchased of the Rawlins heirs the Middleford Mill property in Sussex county, and will establish a large plant to manufacture tinware, brass and nickelware.

Recent Fires.

Peru, Ind.—The large handle factory at Bunker Hill, this county, has been burned to the ground. Loss $8000; partially insured. The fire was started by sparks from an engine.

St. Johnsbury, Vt.—The building occupied by the Carpenter Lathe & Tool Co. has been destroyed by fire.

Winsted, Conn.—The large factory of the Winsted Edge Tool Co., one of the principal industries of this place, has been destroyed by fire. The loss is estimated between $25,000 and $30,000, covered by insurance. The cause of the fire is unknown. The building was a wooden structure, 300 feet long, for one-half its length two stories, and the remainder one story in height. Sixty men are thrown out of work. It is thought the factory will be rebuilt.

Miscellaneous.

Havana, Ill.—Havana has a new plant for the manufacture of shovels. It is outside of the shovel trust and is owned and operated by the Havana Metal Wheel Co. The main building is 200 feet by 60 feet with an annex 35 feet by 100 feet. It is a substantial brick building with slate roof and fully equipped with modern machinery. It has a capacity of upwards of 60 dozen shovels per day.

Columbian 1000-Shot Air Rifle.

Patented Oct. 24, 1893.

CHAMPION MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. **List, per doz., Enameled, $30.00; Full Nickel, $42.00.**

CARY'S PATENT
HINGE
AND
HASP

Designed Especially for
Fruit Crates, Milk, Egg, Cracker and other styles of Boxes, requiring a hinged cover.

CARY MFG. CO.,
19-21 Roosevelt St.,
NEW YORK.

SAMPLES BY MAIL.

IN our patent loop joint hinge, one part of the loop is made rigid to one-half of the hinge, making the strongest, neatest and best hinge for the purposes mentioned.

Our patent fastening plate and catch which go with the hasp are so perfect in their construction that the catch never gets loose from the plate, as is often the case with others on the market.

When desired, we furnish our hasp and catch with a small hole through each, so that a wire can be inserted and then sealed by use of a lead seal.

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

"GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"THE MOST HELPFUL AID."

Pike Mfg. Co., Pike Station, N. H. [*Whetstones, Oil Stones, etc.*]: We like to keep our name and our wares before the public in a modest way. We have found HARDWARE the most helpful aid toward accomplishing that purpose.

"A PROFITABLE MEDIUM TO ADVERTISERS."

Gilbert & Bennett Mfg. Co., Chicago and New York. [*Wire Goods*]: You have reason to be proud of HARDWARE's success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

"COULD NOT KEEP HOUSE WITHOUT IT."

Sickels, Preston & Nutting Co., Davenport. Iowa. [*Wholesale Hardware*]: We would not know how to keep house without HARDWARE. The review of the Hardware markets, trade reports and editorials are frequently read before letters are opened that are received in the same mail with HARDWARE.

"Smokeless" Shells.

Nitro Powders.

"U. M. C. No. 3" Primers.

All sportsmen know that the hands and arms, in shooting, become accustomed to the recoil produced by any uniform charge—and that the slightest unexpected variation of load will make a perceptible difference in their marksmanship.

It is because of the absolute uniformity of charge in U. M. C. Factory Loaded Shells—and the close attention paid to every detail of construction that they are so deservedly popular—being used more than any other shells of the same grade in the market.

Union Metallic Cartridge Company,

Bridgeport, Conn.

313 Broadway, New York.

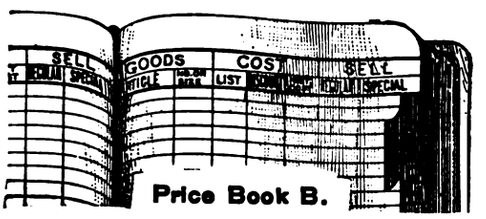
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



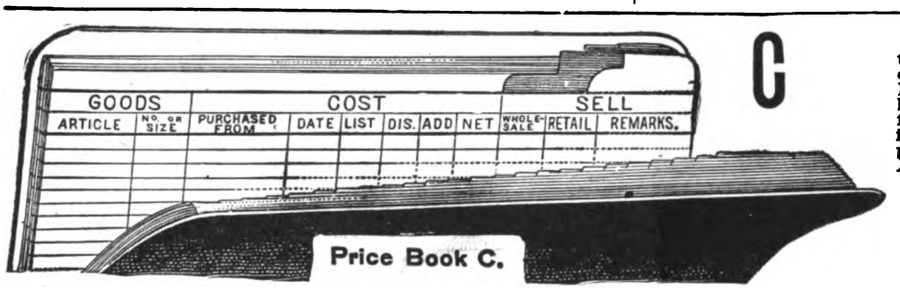
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages,	$1.00	**A 2**, 400 pages,	$1.50
A F, 200 pages with flap,	1.25	**A F 2**, 400 pages with flap,	1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

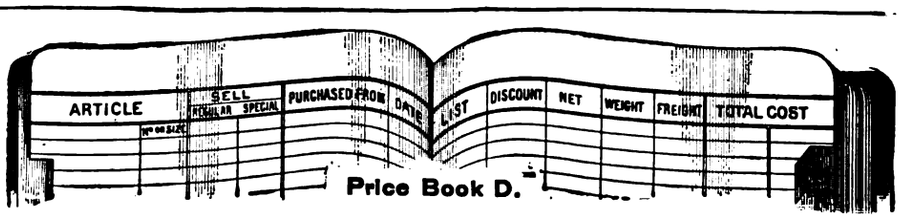
B, 200 pages,	$1.00	**B 2**, 400 pages,	$1.50
B F, 200 pages with flap,	1.25	**B F 2**, 400 pages with flap,	1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¼ inches.***

FOUR EDITIONS:



C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75

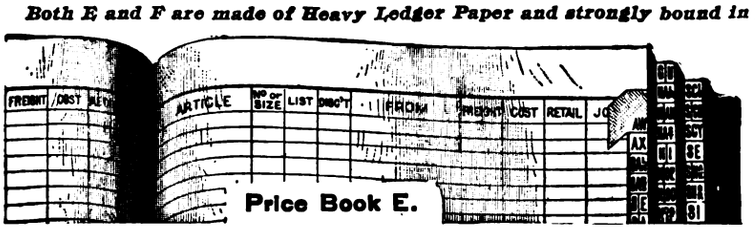
Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages,	$2.00
D F, 200 pages with flap,	2.50
D 2, 400 pages,	3.00
D F 2, 400 pages with flap,	3.50

D

Price Book D.



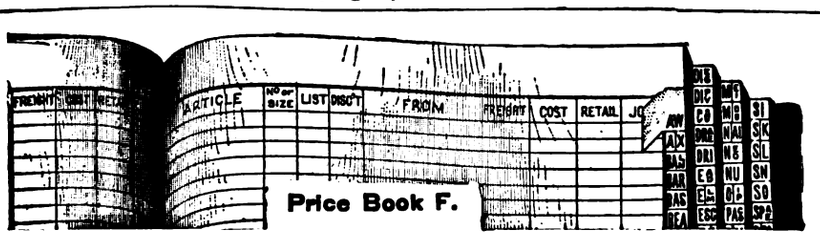
MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers,	turn to	AU	For Chisels,	turn to	CHI	For Iron,	turn to IRO
" Parers, Apple	"	PAP R	" Cutlery,	"	CUT	" Irons,	" IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

E



Price Book E.

Eclipse Cleanable Refrigerator.

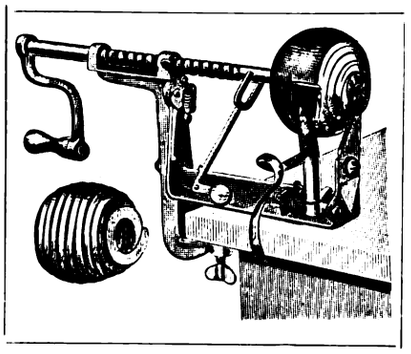
"A MERITORIOUS SPECIALTY."

The only removable ice chamber refrigerator in which the cold dry air is taken to the lowest point in the provision room, through a removable flue, thus creating a positive circulation.

The upward current of air through the provision chamber is so swift that moisture and odors are quickly forced to the ice, the proper condenser and purifier.

The interior is all metal and all parts accessible for cleaning. Has an exceptionally large ice chamber.

Made in attractive plain and ornamental finishes, neat and attractive designs and excellent workmanship.



IT IS NOT A CHEAP REFRIGERATOR

Eclipse Refrigerator Works, Burlington, Vermont.

Digitized by Google

1864--Thirty-Six Years.--1900

WE have had an experience of thirty-six years in manufacturing Apple Parers, and think we are safe in saying we make a larger variety and more than all others combined. We make machines to pare, pare and core, and pare, core and slice, for hand and power, varying in retail price from below $1.00 to $20.00 each; and, if there is a real demand for an Apple Parer we cannot supply, we don't know it.

This illustration represents our White Mountain Parer, Corer and Slicer; a first class family machine at a small cost. It is stronger and better than any one of the imitations, and don't cost any more. We make a specialty of Apple Parers for Evaporators.

HARDWARE

Webster R. Walkley, who bears with dignity the honor of being the silver-tongued orator of the Hardware industry, when called upon at the convention at Old Point Comfort to make a few remarks, made an impromptu speech in his usual happy and inspiring manner, and making more than one of the delegates remark, "He ought to be in Congress." Why not?

T. F. Thomas and A. O. Steenburg have recently withdrawn from the firm of Thomas & Co., Gainesville, Fla., in order to incorporate the T. F. Thomas Hardware, Furniture & Seed Co. They express a desire to receive copies of such catalogues, price lists, etc., from the manufacturers in the several lines of goods implied by their company name. They have a new building, 30x200 feet, two stories, nearly completed, and they are in the market for the necessary stock.

Courtlandt C. Clarke, secretary-treasurer of the Arcade File Works, was among the distinguished visitors at Old Point. This being his first visit to a Southern Hardware Jobbers' Convention, he expressed himself as highly gratified with the experience gained of the unanimity of sentiment and general camaraderie evidenced by this assembly of jobbers in the welfare and good fortune of each other.

Harry S. Wooley, the European traveling representative of John H. Graham & Co., sailed on June 9th on the *Etruria* for his usual visit abroad, during which his efforts will be devoted to the enlightenment of the large buyers in England, Ireland, Scotland and Wales. During the three or four months that will be devoted to this trip, "Harry" anticipates increasing orders for the extensive line of Hardware, house-furnishing goods, mechanics' tools, bicycle accessories, etc., controlled by the important house he represents.

The next meeting of the New England Hardware Dealers' Association will be held at the Atlantic House, Nantasket, on Wednesday, the 27th inst. The dinner will be served at 2.15 P. M. The Entertainment Committee is making extra exertions to have this "Summer Outing with Ladies" a perfect success.

The old quotation has been changed to "Far from the Gladding Crowd," since N. A. Gladding, of E. C. Atkins & Co., Indianapolis, Ind., did his best to decorate those present at the Southern Hardware Jobbers' Convention with rabbit foot charms, and fill their pockets with rubber dating stamps to use on future orders for saws. He seemed to have an unlimited supply of these souvenirs, and in the photograph taken by Photographer Prince, the "left hind foot of a rabbit" is as largely in evidence as the convention badge.

The Stanley Works of New Britain, Conn., are in the field to supply cold rolled steel to dealers and manufacturers. The long experience of the company in rolling steel for their own consumption, combined with the most improved machinery, and the acquisition of the Bridgewater, Mass., mills, places them in a position to meet all demands. A. J. P. Moore, at one time with P. & F. Corbin, New Britain, is the selling agent for New York and vicinity, making his headquarters at the New York office of the Stanley Works, 79 Chambers Street, of which Peter McCartee has so long been the head.

Ed. Johnson, an enterprising young Hardware merchant of Clarks, Neb., has placed an order with the J. D. Warren Mfg. Co., of Chicago, for a complete outfit of Warren Cabinet Shelving for equipping his store in a most complete and up-to-date manner. Mr. Johnson has been in business at Clarks for several years, has built up a prosperous trade, and when his new premises are completed, he will have the finest Hardware store in Nebraska.

J. Friedenstein, Managing Director of the South British Trading Co., Ltd., London, England, left England for New York by the *St. Louis* on the 23d inst. The business of this company consists exclusively of direct representation of American manufacturers, covering the markets thoroughly, their scope of work being that of supplying the merchants and jobbers only. During his visit to this and other cities, Mr. Friedenstein hopes to enter into negotiations with manufacturers of standard lines of Hardware, especially builders' Hardware and household wooden ware, or other specialties prominent in these particular lines, his object being to seek exclusive representation in Great Britain. While in New York, his address will be with Messrs. Oliver Bros., 127 Duane Street.

The increased demand for Magnolia Metal on the Pacific Coast has compelled the Magnolia Metal Co., 266-267 West Street, New York, to open a branch office in San Francisco. This office is under the management and control of Charles C. Moore & Co., engineers, who have branch houses at Los Angeles, Seattle and Honolulu, and with whom they have recently signed a contract giving them the sole and exclusive agency for Magnolia Metal in the States of California, Oregon, Washington, Montana, Nevada, Idaho, Arizona, Utah and New Mexico, and the Hawaiian Islands. Charles C. Moore & Co., engineers, are well known throughout this important and extensive territory, and the connection hereby established will undoubtedly prove an exceedingly valuable one.

The attention of our readers is called to the full-page advertisement of the Arcade File Works on page 55. Few pages more artistically gotten up have ornamented the columns of a trade journal. The advertiser who desires and expects results based on a wise expenditure of a liberal advertising allowance would do well to note the striking attention caused by such artistic execution of a well-conceived idea. The high plane of the trade journalism of to-day could not be more completely exemplified than in the amount of care frequently bestowed upon an advertising page such as the one we call attention to.

On June 13 and 14, 1900, Mr. J. S. Fanning, shooting Laflin & Rand smokeless at Utica, N. Y., broke the world's record, making a remarkable run of 231 consecutive targets.

On March 15 he won the continuous match on the roof of Madison Square Garden, breaking 175 targets straight. He was "high gun" at the interstate tournament at Trenton, N. J., on May 2 and 3; the same at the State shoot held at Chambersburg, Pa., on May 15 and 18; and May 23 and 24 he won the high honors at the interstate tournament at Richmond, Va.; also, on June 5 and 8, at the New York State shoot at Utica. At this tournament Mr. Fanning shot a fraction over 98 per cent.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

Editorial Trade Review.

While the trade generally would appreciate a condition of the various markets that would give an indication of greater stability in prices, it must be acknowledged upon every hand the great producers of raw material are gradually breaking away from the high prices so long prevailing, and are naming quotations of sufficiently lower figures to meet the hopes of the prospective buyers now entertaining satisfactory views of the future trend of business.

This is the period of the year when, if orders run light, the blast furnaces and rolling mills shut down for repairs, and also to avoid adding to a surplus stock already of sufficient importance. Reports from the iron centres indicate the closing by wholesale of a large number of furnaces; at the same time the lowest prices of the year are being freely quoted, by which to move stocks already in excess. The export outlet will be more in evidence when the present quotations are more general, and that feature will promote a greater degree of confidence among producers and prevent panicky fears.

The decline in price on structural steel which has been looked for so long has taken place, and this of itself will prove beneficial to the business in Builders' Hardware, which has been of a more spasmodic character than desirable for some time past. In the immediate future, with a Presidential election and its accompanying derangement of general business by lack of a forceful attention, it will prove of the worst possible influence, if too great stress is laid upon the present sagging conditions of the markets for raw materials.

There is no reason for any lessening demand in the purchase of staples under present favorable auspices, and the usual stock, costs of which are based upon current sales of material, may be ordered with safety, when crop conditions promise a future of confidence in monetary results, and the labor market is in a condition of pronounced activity with no disrupting strike influences to keep the bread out of the mouths of the men only too willing to earn it.

Jobbers with fairly heavy stocks and slackening demand find themselves under the usual necessity of making an occasional cut in standard quotations to stimulate purchases; this condition always accompanies a hesitating market, and need not be magnified by too much notice. It only shows the retail dealer is himself possessed of such conservative views that he buys no three months' stock on 30 day prices, with the prospect of 10 day settlements.

Limited purchases make a light inventory. The dealer without an excessive stock during a fluctuation of prices may miss a few sales, but usually possesses the ability to discount his purchases and pay his drafts. An extravagant demand such as would not have been out of place in 1899 need not be looked for in the season ahead of us, when speculation in goods will be a feature of the market conspicuous by its absence.

The lack of rain in several of the Western States, notably Iowa, Minnesota, and North and South Dakota, is creating a natural apprehension that the crops which were of so promising a character, cannot possibly be realized; and may not reach beyond a half of the anticipated fulness. This will doubtless be followed by an unloading activity among the dealers of these States, which unless care is manifested in the methods of distribution, will start an unprofitable rout.

If the season before us is viewed by purchasers with a conservative confidence, under the belief that an evening-up of prices could find no safer time to eventuate than during an election Fall, everything will come out all right, moderation will be the watchword, and 1901 will open a new ledger with a steady trade ahead; "and enterprises of great pith and moment with this regard their currents" will no longer "turn awry and lose the name of action."

The Influence and Advantage of Association.

Differing entirely from the principle underlying trade unionism, where the organized forces of labor are used as a club to whack the employer into subjection, the associations formed of merchants banded together for the general good of a trade and traffic which otherwise might run wild, present principles of such vast importance it seems to the economic student wonderful indeed that only within the past decade has the association idea among certain classes of merchants possessed any special significance.

This arose from the fact that we had all been educated in a school of selfishly acquired experience, which was guarded with the strictest care, acquired as it was only by digging and delving in the mines of industry with long hours and low pay as the obvious reward, every leader in the industry believing that in any other line similar application would have achieved a greater pecuniary emolument.

In those days we never told all we knew; to-day we are ambitious to do so, and would feel offended were we denied. No greater object lesson of the present mode of trade assimilation could be given than the Convention of the Southern Hardware Jobbers' Association, which during the past fortnight was held at Old Point Comfort, and whose proceedings are so fully reported in the columns of the present issue of our paper.

There we find men, who in the old days were sworn enemies in business, who could pass each other on the streets of their native town without a single glance intimating acquaintanceship; were to-day working hand in glove in the accomplishment of a single purpose, that of moulding individual wishes and desires having reference to the safe expansion of a steady business, the economy of its distrib-

uting methods, and the uniformity of its purchasing power.

All working together with a condition of harmony between competitors that would make their fathers and grandfathers—to whose business many have succeeded—turn over in their graves, even tho' fragrant with the mint so eulogized by Col. Atkinson in his well-considered speech.

The convention was an object lesson on a business basis in all that the name implies. In the days of prosperity's dawning delights, the manufacturer arbitrarily changes his terms to "net cash 30 days," after having educated his customer to a financial method that made "2 off ten days" a reward for prompt remittances. What is the result? In convention assembled the victims of this oppression make a united demand for a restoration of the old terms, and the manufacturers, like Davy Crockett's coon, cry out: "Don't shoot, Mr. Jobber, I'll come down," and come down they did.

Read the papers presented by both the representatives of the jobbers and eke he of the manufacturers: "Terms of sale from a manufacturer's standpoint," in which Manufacturer Plumb expresses a willingness to die in the last ditch defending "net cash thirty days," when beyond a doubt the first chance he gets to incorporate it in the cost without comment he will be found falling in line even as his fellow citizen, the illustrious secretary-treasurer Fernley has prophesied.

"The effects of trusts and combinations on the jobbing business," is the high-flown argument that soars from Mr. Pidgeon; and, after all, what do they decide? That the trusts have made a year of startling profits possible, and followed it up by a phenomenal decline that made "swearing" not impossible.

The new methods of fraternization make it possible for the manufacturer and jobber to argue together upon questions so vital to the prosperity of each as the following: "Can a manufacturer sell a jobber and retail merchant in the same territory and conserve both interests?" This was a drawn game, for the impression was felt that if the manufacturer couldn't sell the jobber he would create a demand for his wares through the retailer.

"Should the manufacturers of standard brands of goods sell their products to catalogue houses and department stores?" Discussion on this was wisely deprecated and decidedly limited, for it is a well-known fact that a single department store in a large city has been known to order more hardware in a half day's work than the local jobbers have done in an entire week; and self-denial govern
ing efforts of this character it would not be wise to s
for. Even "quantity discounts," the customary di
tion which separates a jobber from a retailer, was
ject of animadversions of a pronounced charact

Death of Horace C. Disston.

Horace C. Disston, president of the Henry Disston & Sons' Iron and Steel Works (incorporated) and vice-president of the Henry Disston & Sons' Saw Works (incorporated), died June 13 at his country home, "Seneca Point," on the North East River, Cecil County, Maryland. He had been in poor health for a considerable time. About three years ago he began to be troubled with a dropsical affection, and for some time past he had not been able to take an active part in the conduct of his important business interests.

Two weeks previously Mr. Disston closed his town residence, No. 644 North Seventeenth Street, and went to "Seneca Point." His death was due to apoplexy, and his two brothers, William and Jacob Disston, were with him when he passed away.

Mr. Disston, who was a brother of the late Hamilton Disston, was born in Philadelphia, January 10, 1854. His father, the late Henry Disston, was the founder of the largest saw and file manufactory in this country and the most successful competitor with the best-known foreign makers. The works, which now occupy over thirty acres of land at Tacony and employ about three thousand men, grew from a little shop in a basement, with an office on the first floor. As business increased, a manufactory was established at Front and Laurel Streets. On the death of Henry Disston, in 1878, the business was incorporated.

After attending the Episcopal Academy in this city until his seventeenth year, Horace Disston entered his father's works and learned the general saw business. Then he went into the steel department, eventually became manager of that department, and finally president.

Deceased was widely known for his benevolence. He was ever ready to assist worthy charities by generous contributions. Through his munificence many poor women and children were given free excursions down the Del
mer. At his country home in M
tributed largely to the wants o
hood, where he was held in
member of the Union Le

cated, will show an increase of more than $75,000,000; products of agriculture will show an increase of nearly $50,000,000; products of the mine, an increase of nearly $10,000,000; those of the forest about an equal sum; fisheries are $2,000,000 larger than last year, and the miscellaneous class shows a marked increase. Probably the largest increase is in manufactures of iron and steel, though cotton will show a considerable increase, owing to the marked advance in price. Nearly all grades of manufactures of iron and steel show an advance. Steel rails in the 10 months ending with April, 1900, increased from $4,500,000 to $6,500,000; structural iron and steel, from $1,350,000 in the 10 months ending April, 1899, to $2,076,000; wire, from 169,000,000 pounds to 198,000,000 pounds, the increase in value being from $3,000,000 to $4,951,000, the advance in price being much greater than that in quantity, and this is true in nearly all grades of iron and steel exports. Builders' Hardware increased from $6,332,000 to $7,833,000; railway engines, from $3,798,000 to $4,805,000; wire nails, despite the large increase in price, more than doubled in quantity of their export, the total number of pounds in the 10 months ending with April, 1900, being 77,592,000, against 37,336,000 a year earlier. The total exports of manufactures of iron and steel will be about $120,000,000, or more than 20 per cent. in excess of last year, despite the frequently expressed fear that the advance in prices would cause a reduction in exports.

Other lines of manufacture show a large advance. Leather and its manufactures show an increase from $19,000,000 to nearly $23,000,000 during the period under considration, and mineral oils an increase from $40,000,000 to $56,000,000, though this increase is chiefly due to the advance in price, the quantity exported in the 10 months ending with April, 1899, being 650,000,000 gallons, and that for the 10 months ending with April, 1900, 684,000,000 gallons.

RRESPONDENCE.

bury, Attorney and Counsellor at Law, eet, New York.

" is privileged to ask any legal and it will be answered free o Editor "HARDWARE,"

of mine left New trip. Before his He had never family that to me. My realized ke his half er s-

any, liability I incurred when I and my fellow-directors failed to make an annual report.

REPLY.—Under the laws of this State, if the directors of a corporation fail to file an annual report as required by section 30 of the Stock Corporation law, they become *personally* liable for all the debts of the corporation "then existing and for all contracted before such report shall be made." The construction put upon this clause by the Court of Appeals limits the liability of a director for default in publishing the required annual report to debts contracted while the director continues in office, and does not include a debt incurred after he ceases to be a director, although the default continues and no report has been filed. Directors of corporations should thoroughly familiarize themselves with the duties and liabilities imposed upon directors by the laws of the State where the corporation is organized, as it often occurs that a man is a director of a corporation, but takes no active part in the management of the business, and leaves the filing of reports and other duties to the other directors, thinking that he will thus absolve himself from liability. This is an error, as many have found out to their cost.

QUESTION.—A short time ago my brother died. He had considerable real estate, much of which is in New York. My brother had one child, and left a widow and three brothers, his father and mother having been dead for some time. I understod that my deceased brother's real estate was in his own and his wife's name together. We are unable to find any will and believe that my brother died without making one. If my brother left no will, how will his property be divided?

REPLY.—If your brother died intestate, leaving a widow, child and brothers, and no father nor mother, as to the real property held in New York State in the names of your deceased brother and his wife, as you describe, your deceased brother's widow would, in the absence of special circumstances, be entitled to all the property so held. Where real property is held by a man and wife in New York State in the names of both, and there is nothing to show any special intent as to the method of holding this property, it is held by them as tenants by the entirety. The peculiar feature of this kind of tenancy of real estate is that the entire estate, upon the death of *one* party goes to the survivor. This rule, although it applies to property situated in New York, has been changed in some States. New Hampshire, for instance, has for a number of years past ceased to recognize this common-law principle. In States not recognizing the rule, the child would in most instances get two-thirds of the property and the widow the other third. This would, however, depand upon the statutes of the particular State where the property was situated.

QUESTION.—An employee starting to work for $20 per week, and is afterward raised by his employer voluntarily $150 per month, payable semi-monthly, is suddenly dis- ed without notice. Can the company be held for thirty salary? Would the fact of the company holding back s' salary make any legal difference?

—If your employee was hired by you for the defi- of one month, with a salary payable semi-monthly rate of $150 per month, and you discharged ithout notice before the expiration of the t cause, your employee may wait until the and then sue you for the breach of con- balance of his month's salary. [Amer. vol. xiv., p. 798.]

ITEMS OF INTEREST FROM EVERYWHERE.

Denmark claims that there is not a single person in her domain who cannot read and write.

Land on which rubber may be raised in Mexico can be bought for from $1 to $15 an acre, not cleared.

The oldest banknote in the possession of the Bank of England is dated December 19, 1699, and is for £555.

An electric railway is now running between the north and south extremities of Berlin. The length of the line is 15,180 meters.

The amount of gold coin in actual circulation in the world is estimated by the Bank of England officials to be about 865 tons.

The entire collection of coins and medals in the British Museum consists of nearly one-quarter of a million specimens.

Anywhere in the world, no matter where, the chances are that the clothes-pins used in hanging out clothes were made in America.

The Island of Antigua, West Indies, with a population of 35,000, has about fifty bicycles, just nine-tenths of which are of Yankee make.

The Vancouver (B. C.) Board of Trade has arranged to keep on file for reference the catalogues of American manufacturers and dealers.

There is again under consideration a plan for establishing a telegraphic circuit of the earth by uniting Alaska with Siberia across the Behring Sea.

A wrought-iron gas main, 23,015 feet long and 3 inches in diameter, is in use between Phoenixville and Royersford, Pa. The gas is conveyed under pressure of 20 pounds.

Telegraph wires are better conductors on Monday than on Saturday, on account of their Sunday rest, and a rest of three weeks adds 10 per cent. to the conductivity of a wire.

The Alabama Great Southern Railroad sent a freight train over half a mile long into Chattanooga recently. It came from New Orleans, and was drawn by two locomotives.

If an express train, moving at the rate of forty-five miles an hour, were to stop suddenly it would give the passengers a shock equal to that of falling from the height of fifty-four feet.

Cups and saucers are never used for tea anywhere in Russia. The teacup is an unknown article. The drinking vessel for tea is the "stakan," a glass tumbler in a silver holder. No Russian ever drinks milk in his tea.

In Guatemala a resident has patented an apparatus to prevent ships from sinking, having folded air reservoirs from the ceiling of the different compartments, to be unfolded and inflated to fill the compartment when the ship leaks.

Among the reports from South Africa is one to the effect that Mauser bullets are ineffective in checking a charge of cavalry. Horses shot through the lungs, and even through the breast, were able to gallop four hundred yards before they fell.

The higher classes of machinery and tools used in Russia are from Great Britain and the United States. At present there is more demand for common sorts. The finer sorts are used in bicycle factories, marine machine shops, etc.

Ice cream freezers of American manufacture are sold all over the world, wherever ice, either natural or artificial, is used. The ice cream eaten in Calcutta or in Melbourne or in any other city or country, Europe included, would be more than likely to have been made in an American freezer.

There are more than twice as many blind persons in Russia as in the whole of the rest of Europe. They number 190,000, which is equivalent to two in every 1000 of the population. In France and England the proportion is not quite one per 1000. It is believed that blindness in Russia is so prevalent because of the length of time which snow lies on the ground, and also owing to the uncleanly habits of the people.

A novel electric fountain has been authorized by the Park Board of Detroit. The basin will be forty feet in diameter, and the fountain proper will consist of five cobblestone columns. From the apex of each will burst a stream of water, each lighted by hidden electric lamps. The fountain will cost about $3000 and will be ready for use July 4.

The oldest college library is that of Harvard, which dates back to 1636. The first library statistics in the United States were published by the Commissioners of Education in 1876, at which time we had only 2500, aggregating 12,000,000 volumes. Twenty years later we had 33,000,000 books scattered through 4000 libraries, and, as the growth has been very rapid in the last four years, it is safe to assume that there are now in the public libraries of the United States 40,000,000 volumes.

The citizens of Berlin have a summary method of stopping the dangerous practice of carrying sticks and umbrellas horizontally. As soon as a man tucks his umbrella under his arm he will promptly feel a quick blow on it from behind. There is no use in his getting angry with the person who strikes the blow, because the public are determined to stop this dangerous practice.

In Berlin the firemen wear water-jackets with a double skin, which they are able to fill with water from the hose. If the space between the two layers becomes over-filled, the water escapes through a valve at the top of the helmet and flows down over the fireman like a cascade, protecting him doubly. The smoke-helmets, largely used in Germany, Austria, Holland, and Italy, enable the bearer to breathe and see at his ease in a smoke-laden atmosphere. In some instances the apparatus includes a means of telephonic communication with the street below.

A machine has been provided for automatically cleaning shoes. The foot is inserted into a properly arranged opening and the railing of the machine is firmly grasped. A small motor actuates rotary brushes that remove the mud. The foot is next placed in the blacking arrangement proper, which acts as a dauber, and the third set of brushes is devoted to polishing. One shoe having been sufficiently polished, the other foot is then inserted in the first aperture, etc. A needle on a machine indicates the various stages in the operation. The only precaution to be observed is to turn up the bottom of the trousers sufficiently so that they will not be caught in the rotating brushes.

Iowa Hardware Jobbers' Association.

The Iowa Hardware Jobbers' Association met at the Hotel Delano, Burlington, on June 6, in what may be considered an annual convention. The sessions were held in Parlor No. 1, and, with one exception, every firm in the association was represented by one or more members.

Meetings of the association are held quarterly, but as this meeting chanced to fall at the beginning of the new fiscal year, it was to all intents and purposes the annual meeting, and as such the annual election of officers was held, with the following result:

President, F. W. Simmons, of George Haw & Co., Ottumwa.

Vice-President, Charles E. Otto, of Drake Hardware Co., Burlington.

Secretary-Treasurer, John Tredway, of A. Tredway & Sons' Hardware Co., Dubuque.

The meeting was addressed by W. P. Bissell, of Chicago, of the American Steel & Wire Co., on the general situation of trade in the particular branches covered by that concern.

Looking over the trade generally, it was found that staple goods have declined, except sheet and galvanized iron and tin plate, which remain stationary, although an advance had been expected. A further weakening of the market is anticipated.

Among those in attendance at the meeting were the following:

Theodore Neuhaus, of Sickels, Preston & Nutting Co., Davenport.

Charles C. Schreiber, of Schreiber, Conchar & Westphal Co., Dubuque.

F. E. Cutler, of Cutler Hardware Co., Waterloo.

John Tredway, of A. Tredway & Sons' Hardware Co., Dubuque.

S. H. Jones and C. E. Otto, of Drake Hardware Co., Burlington.

C. F. Schmidt, of C. Schmidt Hardware Co., Burlington.

Charles Huber, of Huber & Kalbach Co., Oskaloosa.

Frank McIntire, of Harper & McIntire Co., Ottumwa.

T. E. Hurley, of J. D. Seeberger, of Des Moines.

J. W. Stewart, of J. W. Stewart, Rock Island, Ill.

Robert Donahue, Sr. and Jr., of Robert Donahue Iron & Hardware Co., Burlington.

L. C. Moesinger, of Baldwin Bros., Clinton.

F. W. Simmons, of George Haw & Co., Ottumwa.

The only firms not represented were C. F. Armstrong & Co., Clinton; A. Weber & Co., Keokuk; and Patrick & Luthe Co., Des Moines.

The retiring officers were C. Schreiber, president; A. Weber, vice-president; W. H. Kalbach, secretary and treasurer.

The production of iron and steel wire nails in the United States in 1899 amounted to 7,599,522 kegs of 100 pounds each, as compared with 7,418,475 kegs in 1898, an increase of 181,047 kegs, or over 2 per cent. Pennsylvania comes first with 2,919,645 kegs; Ohio second, with 2,083,646 kegs, and Illinois third, with 1,755,568 kegs. In 1898 Pennsylvania produced 3,408,504 kegs; Ohio, 1,711,399 kegs, and Illinois, 1,394,981 kegs. The feature in this line is the great decrease in Pennsylvania's production of wire nails and the corresponding increase in the production of Ohio and Illinois.

The total production of cut nails in 1899 was 1,904,340 kegs of 100 pounds each, against 1,572,221 kegs in 1898, an increase of 332,119 kegs, or over 21 per cent. In 1886 the maximum production of 8,160,973 kegs was reached. In 1899 the production of wire nails exceeded the production of cut nails by 5,695,182 kegs. In 1897 the wire-nail production exceeded the cut nail production by 6,890,446 kegs.

"What is a financier?"

"Usually a man who makes money without earning it."

His Mistake.

There is a young man in the Pension Office who is buying a house on the installment plan at a town somewhere between this and Baltimore, and his dear little wife lives out there, says the Washington *Post*. It is his wont to come in early of a morning, and to go out again on the 5.30 train, when his day's work is done. A few days ago he met an old friend from Chicago, and, yielding to the entreaties of that old friend, he decided to spend the evening in town. He was so afraid his wife would feel hurt if she knew that he had deliberately planned an evening's good time without counting her in that he manfully resolved to deceive her. Accordingly, as he came away from the office he went to a telegraph office and sent this message to her:

"Unavoidably detained. Missed 5.30 train. Will be out later."

It was a great deal later when he reached his happy home. Wifie met him at the door, and there was a look in her eye that every married man learns to know and instinctively to dread.

"Did you get my message, precious?" he asked, as he kissed her tenderly, holding his breath meanwhile as a precautionary measure.

"Yes, dear," she made answer, and when a woman calls her husband "dear" that way, you can cut loose from the weather bureau and prognosticate a few things on your own hook. "Yes, dear, I received your message. Here it is."

There it was, sure enough. It was marked as plain as plain could be, "Received at 4.23." He hadn't thought of that.

"We have an office-boy," remarked the representative of the Nicholson File Co. the other day, "who could never draw a salary on account of his physical resemblance to Shakespeare, Alfred Austin or the poet of the Clam Bay *Gazette*. He is a chub-faced, dare-devil little rascal, about two feet seven, with feet like a mattress and a head shaped like an ink-well with the cover off. But when it comes to poetic inspiration, combined with idyllic expression, he can give the whole posse a run for their money and make them put a sheet-anchor on their monuments and glory for fear of losing them. See what I found in the Kid's desk the other day," and he produced the following lyric:

"There are many men of many minds,
And many files of many kinds.
Some are better, some are worse;
Some a blessing, some a curse.
For some there is no good excuse,
Some are made for special use.
But it's very hard to find
All virtues in one brand combined.
Such is the case with the Nicholson Brand,
For it is foremost in the land."

"Isn't that grand?" said the salesman, as he concluded its reading. "The company is going to give him $100,000, set him back 200 years, and let him and Bill Shakespeare try a catch-as-catch-can on Hamlet and Richard III." And with that he hastily wrote down an order, held a pistol to the head of our buyer while he signed it, and went out of the door whistling a small chunk of "Annie Rooney" with smile accompaniment.

Last week a negro convict was taken from Wichita to the penitentiary. On the way down he begged the Sheriff to tell the Warden that "I am sickly and not able to work in the coal mines." The Sheriff promised, and, after seeing the Warden, told the negro that it was all fixed; that he was not to work in the coal mines, but be watchman at the dead house instead. "Gawd Almighty!" shouted the affrighted negro. "Tell dat Wahden I kin dig fohty tons ob coal a day, an' don't let him put me wid dem corpuses!"—*Kansas City Journal.*

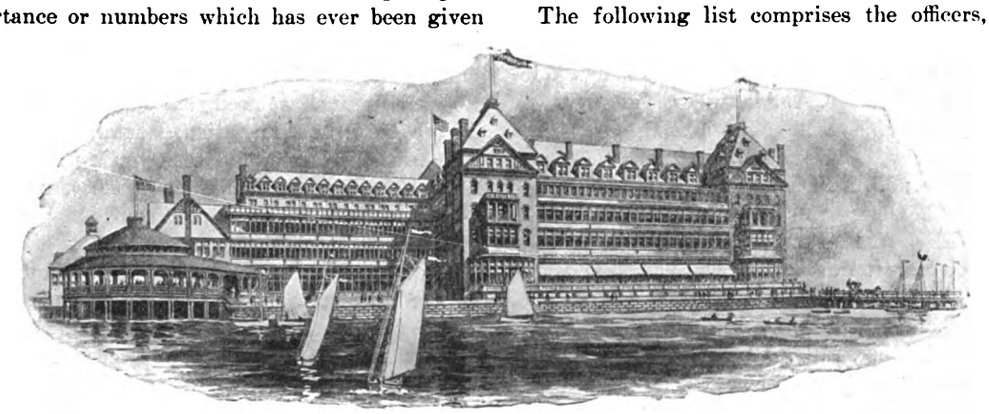
SOUTHERN HARDWARE JOBBERS ASS'N.

The tenth annual convention of the Southern Hardware Jobbers' Association has come and gone, and is now enrolled as a memorable part of Hardware Association history, and given an imperishable record of ambitions, aspirations, com-

mercial achievements and hospitable welcome, peculiarly characteristic of the Southern nature in every stage of life.



The convention beyond question was the most imposing in point of importance or numbers which has ever been given since the foundation of the Association. The officers and members, the numerous guests, the gladdening throng of wives and daughters which accompanied them, all vied with each other in an ever present desire to make the success of the gathering pre-eminent for the qualities of head and heart which form the motive and inspiration of this annual assemblage.

The place selected, the Hotel Chamberlin at Old Point Comfort, Virginia, could scarcely be excelled for its appropriate location on the sacred soil of Virginia, at the spot where the Colonists, under Capt. John Smith, in 1607, were driven by a storm to seek shelter, and named the haven of rest Old Point Comfort in grateful remembrance for the sheltering comfort found by these adventurous pioneers. A corner of our coast where more hallowed memories may be said to hang in clusters, it would be difficult to find; and the magnificent Hotel Chamberlin, with its immensity of area for the accommodation of a multitude, made it indeed an ideal place in which to hold a convention of this combined business and social character. It is one of the most modern of the hotels which adorn the edges of old ocean, being architecturally handsome, completely equipped and extensive in dimensions, which seem marvellous in their conception and execution; possessing as the hotel does a frontage larger than that of the Capitol at Washigton, we no longer are amazed that it cost a million and a half dollars before John Chamberlin, after whom it was named, in 1896 first opened it to 5000 guests, all of whom were personal friends who had at various times tested the resources of a cuisine inaugurated under the auspices of this prince among bon vivants and past master of the art of hotel keeping.

Although the convention was announced to commence on Wednesday, many of the delegates and invited guests, accompanied by their wives and daughters, arrived on Tuesday, and the wide corridors and magnificent parlors of the Chamberlin rapidly became filled with joyous faces and happy hearts, through whose sustaining influences the delegates gathered strength to achieve the great success with which the convention was crowned.

The preparations for the proper care and entertainment of the convention and its numerous delegates were intrusted to one of the most important reception committees which ever had such matters in hand; representing as it did so many of the leading manufacturers whose relations with the Southern jobbers in a business way were of the most fraternal nature. A glance at its personnel as given herewith will convey some idea of its strength and untiring energy:

The following list comprises the officers, standing committees, and members of the Southern Hardware Jobbers' Association for 1899-1900:

HOTEL CHAMBERLIN, OLD POINT COMFORT.

OFFICERS, 1899-1900.

President: O. B. Barker, Barker-Jennings Hardware Co., Lynchburg, Va.

Vice-President: R. E. Bell, R. E. Bell Hardware Co., Weatherford, Tex.

Digitized by Google

Secretary-Treasurer: C. B. Carter, Knoxville, Tenn.

Executive Committee: W. E. Gibbins, Woodruff Hardware Co., Knoxville, Tenn.; W. A. Parker, Beck & Gregg Hardware Co., Atlanta, Ga.; C. N. Roberts, Roberts, Sanford & Taylor Co., Sherman, Tex.; C. E Speer, Speer Hardware Co., Ft. Smith, Ark.

Transportation Committee: W. E. Newill, King Hardware Co., Atlanta, Ga.; John Donnan, W. S. Donnan & Co., Richmond, Va.; F. A. Heitmann, F. W. Heitmann & Co., Houston, Tex.

Manufacturers' Committee: J. D. Moore, Moore & Handley Hardware Co., Birmingham, Ala.; Chas. H. Ireland, Odell Hardware Co., Greensboro, N. C.; James Moroney, Moroney Hardware Co., Dallas, Tex.

Grievance Committee: B. F. Atkinson, Atkinson Hardware Co., Fort Smith, Ark.; A. P. Duncan, McLendon, Duncan & Co., Waco, Tex.; Frank S. Gray, The S. B Hubbard Co., Jacksonville, Fla

Membership Committee: Fred. Orgill, Orgill Bros. & Co., Memphis, Tenn.; R. C. Carson, Charlotte Hardware Co., Charlotte, N. C.; H. G. Lipscomb, H. G. Lipscomb & Co., Nashville, Tenn.; A. B. Palmer, Palmer Hardware Co, Savannah, Ga.; W. A. Pleasants, W. A. Pleasants Hardware Co., Shreveport, La.

EX-PRES DENT O. B. BARKER.

Press Committee: G. W. Barnett, Teague, Barnett & Co., Montgomery, Ala.; Thos. W. Fritts, Tom Fritts Hardware Co., Chattanooga, Tenn.; Frank P. May, Frank P. May & Co., Washington, D. C.

Reception Committee: Irby Bennett, Chairman, Winchester Repeating Arms Co.; T. A. Alexander, Yale & Towne Mfg. Co.; S. B. Bispham, Russell & Erwin Mfg. Co.; Chas. L. Campbell, Peck, Stow & Wilcox Co.; Percy C. Cauthorn, W. W. Crandall & Co.; W. A. Chenoweth, Republic Steel & Iron Co.; Arthur B. Clarke, Old Dominion Iron & Nail Works Co.; Thos. Ellis, A. H. Funke; Frank H. Davis, Lake Erie Iron Co.; Howard M. Davis, American Tin Plate Co.; F. H. Forman, The American Steel & Wire Co.; C. M. Fouche, Park Brothers & Co.; S. G. Gilfillan, Belfont Iron Works Co.; N. A. Gladding, E. C. Atkins & Co.; T. H. Gossett, John H. Graham & Co.; Joseph H. Grubb, Hussey, Binns & Co.; Frank Guildener, Sargent & Co.; George H. Harper, Clendennin Brothers; J. Hildreth, Jr., Winchester Repeating Arms Co.; John Hoen, Henry Keidel & Co.; Jos. M. Hottel, G. & H. Barnett Co.; W. P. Hudson, Russell & Erwin Mfg. Co.; Fred M. Huggins, Landers, Frary & Clark; James P. Kelly, Kelly Axe Mfg. Co.; Felix B. Lippman, Adolph Kastor & Bros.; Henry B. Lupton, American Steel and Wire Co.; Carle T. McKinnie, Stanley Works; John J. Mapp, National Enameling & Stamping Co.; O. C. Mead, Mead & Smith; Guy Mitchell, Mallory-Wheeler Co.; V. A. Moore, V. A. Moore & Co.; Henry F. Reese, The Fairbanks Co.; John S. Sanders, Union Metallic Cartridge Co.; Jno. F. Schroeder, Miller Knife Co.; Fred S. Seeley, Wiebusch & Hilger; W. P. Smith, J. C. McCarty & Co.; Dan K. Stucki, Terre Haute Shovel & Tool Co.; J. P. Tabb, Tabb Bros. & Co.; L. D. Vogel, Charter Oak Stove & Range Co.; R. S. Waddell, E. I. Du Pont de Nemours & Co.; D. M. Walke, Keen & Hagerty Mfg. Co.; F. C. Wheeler, Hermann Boker & Co.; Charles Wier, American Axe & Tool Co.; Chas. R. Wilcox, The American Iron & Steel Mfg. Co.; John K. Wilson, Wier & Wilson.

Sergeant-at-Arms: H. H. Beers, Schmachtenberg Bros., New York.

No more indefatigable chairman could head any committee than Irby Bennett, of the Winchester Repeating Arms Co., who having so gracefully filled the responsible position of yore, it was in the order of a natural selection that he was chosen to engineer the labors devolving upon himself and the other members.

To Harry H. Beers, the representative of Schmachtenberg Bros., and the sergeant-at-arms of the committee, devolved the onerous and responsible duty of preparing the convention register and distributing the handsome badges which made each recipient part and parcel of the convention proper.

WEDNESDAY MORNING SESSION.

The first session of the convention was held in the magnificent ball room of the hotel on Wednesday morning, June 13th, being called to order by President Barker at 10.30. Nearly sixty delegates were in attendance, and the meeting being a general one, a large number of invited guests were present. The event was further signalized by the presence of many of the lady visitors. The President in announcing the opening of the convention called upon those present to unite in singing "America," and right heartily did all present join in giving effective expression to the all-pervading sentiment, "My Country, 'Tis of Thee."

Roll call was next in order, but few delegates being absent.

President Barker then proceeded to deliver his address of welcome.

PRESIDENT'S ADDRESS OF WELCOME.

Ladies and Gentlemen: It becomes my most pleasant duty to greet you and extend a most hearty and cordial welcome to this the Tenth Annual Convention of the Southern Hardware Jobbers' Association.

I am very much gratified to see present so large a number of the fair sex, many of whom have honored us with their presence on previous occasions. Your presence stimulates and encourages us, lightens our burdens and adds greatly to our pleasure. Most of you are familiar with the worries and perplexities to which Hardware men are subjected, and fully realize how much we need your sympathy and encouragement. In behalf of the Association, I extend to you a most sincere and hearty welcome, and wish you a pleasant and enjoyable sojourn while at this delightful seashore resort, and hope you will be so charmed that it will require no persuasion to induce you to attend our next convention.

To the gentlemen present, members of our Association and honored guests, in behalf of our Association I extend to you also a most hearty welcome. It is a great pleasure to meet each other face to face and to discuss those things in which we are mutually interested. It is pleasant to meet together, take each other by the hand and to cultivate the friendship and strengthen the tie of brotherly feeling and good will which has characterized our Association. I trust that the few days we shall spend here will be pleasant, agreeable and profitable, and that we will return to our homes feeling that we have received some benefit and have benefited others.

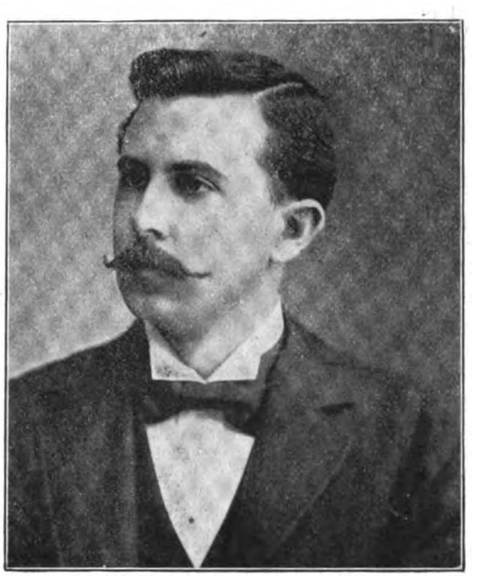
Old Point Comfort is yours during this convention. Irby Bennett, our worthy Chairman of the Reception Committee, and his associates, will do all in their power, I assure you, to

Digitized by Google

make your visit pleasant. Again I extend to all a most hearty old Virginia welcome.

At the conclusion of the opening address, which was received with applause, Col. B. F. Atkinson, of the Atkinson Hardware Co., Fort Smith, Ark., addressed the convention as follows:

ADDRESS OF WELCOME TO THE MANUFACTURERS.



Mr. President, Ladies and Gentlemen: To me has been assigned the pleasing task of addressing this intelligent representative business assembly. For the courtesy of this recognition of our Southwestern borderland I return to you, upon its behalf, my grateful acknowledgment, but it is with no little trepidation that I assay the difficult role of entertaining you upon a topic that has already been so well presented and thoroughly discussed by the gentleman who preceded me, the honored President of our Association.

Permit me to add, by way of comment, that if this gentleman's bite is as effective as his bark, his competitors had better "loog a leedle owet," and the difficulty of my task is enhanced by the reflection that any formal address of welcome to this hospitable old Virginia shore would seem a perfunctory duty, for the ambient air, as it is wafted to us from the old Atlantic breathes an invigorating welcome; the birds from the boughs of these grand old trees sing us a cheery welcome; the bright eyes and approving smiles of Virginia's fair dames and beautiful damsels greet us in kindly welcome to this grand old commonwealth that gave birth to those historic characters whose wisdom, foresight and courage made possible the greatest government and the grandest people on this terrestrial globe. (Applause.)

And we, of the Hardware jobbing craft, are vouchsafed an assurance of welcome which is, I think, of peculiar significance. From the sages of the philosophic schools we learn that in the arrangement of the divine plan by wise dispensation of kind providence, each latitude of subdivision of the earth grows those antidotes which are suited to the ills incident thereto; that each provides the necessary comforts that are essential to the well being of its inhabitants. In confirmation of this theory, we find that the generous soil of old Virginia, in whose bosom has been planted so many of those Virginia gentlemen of the old regime, has made indigenous that aromatic plant known as mint, which is so essential to a genuine Summer-time Virginia welcome. (Applause.) This thought is suggested by the story (don't ring the chestnut bell, please) of that erstwhile Virginia gentleman who, while entertaining a way-worn and thirsty guest, directed his son to bring from a nearby mint bed that essential concomitant of a julep. The dutiful son whispered into the parental ear that the mint bed was well nigh exhausted while satiating the thirst of the numerous departed guests of that morning, when this thoughtful, resourceful grand old man said: "Then, my son, go across the creek to your grandfather's grave, where you will find a-plenty of it." (Applause.)

Now, after a long and somewhat intimate acquaintance with Hardware jobbers, and after a careful computation of their tastes and tipples, I find that exactly 98 per cent. of them at this season of the year take grass in thern; the remaining 2 per cent. goes for the discount, that is off their feed. Then let us indulge the hope that mine host of the Chamberlin, if he has any old stock in the house, will make it a point to thus contribute to our comfort while we are at Old Point Comfort. (Applause.)

It rarely falls to the lot of an improvised speaker, like the present one, to address an assemblage as representative in character as this one, drawn from every part of so diversified a country, for we come from the orange groves of Florida; from the guber-grabbing hills and watermelon plantations of Georgia; from the cotton mills and licensed gin mills of South Carolina; from the classic banks of Tar River, that sticks to the name and fame of old North Carolina; from the coon, corn and cotton fields of Mississippi; from that gallant old volunteer State of Tennessee, in whose mountain fastnesses its people are still voting for Andy Johnson and Ginil Andy Jackson, and an appropriation (Applause); from the still mountain dews, or, rather, from the mountain dew stills, of old Kentucky (laughter), whose people, while emulating the distinguished pioneer features of that commonwealth, have become so expert as marksmen that in times of political strife they can stand upon the streets of Louisville and shoot through a keyhole in Frankfort; whose Alpine climbers, who fish, fight and fiddle (laughter) through their feud days, can sit upon one of their peaks and knock out a mosquito's eye on the dome of the Galt House. (Applause.) But dear old Kentucky, endeared to us by so many sacred memories and tender associations of our youthful days, the land of patriotism and oratory, the home of portly horses and portly women, with all your faults we love your stills. (Laughter.) We come from that Southwestern empire "Lone Star" State of Texas, whose heroic pioneers have added undying lustre to the pages of American history, whose enlightened progressive business men have added material wealth to our beloved Southland, over whose vast expanse of magnificent distances roams the educated hog of Cyclone Davis, their fat broad-horned cattle, and their enlightened broad-gauged men. And last, but what should in point of fact have been first (but for my modesty), we come from the red

SECRETARY-TREASURER C. B. CARTER.

apple orchards and zinc and coal mines of that greater State of Arkansas (laughter), whose inexhaustible coal fields underlie everything, and while I am not a real estate agent, I make bold to say that we do not out-lie any one when we tell you we have coal to burn. And above these vast treasures of hidden wealth grow dark, leafy forests of magnificent timber, rooted in a rich virgin soil which awaits only to be tickled by the surveyor's chain to boom into corner lots, dominated by people who, in the intensity of their loyal devotion to Southern sentiment, are still voting for Jeff Davis, for we elected him Governor but a few days ago—that is, we nominated him, which means that the other candidate has as much chance of election as I have of being made Queen of England. (Laughter.)

It is our pleasure to announce that we are honored upon this occasion as guests by those cute, cultured gentlemen coming to us from the peaceful hills and valleys of New England, where, nestling among its beautiful hills and beside its liquid streams, are those ceaseless hives of industry, the smoke from whose stacks encircles the domes of their ever-present school houses and entwines the spires of their revered meeting houses, among the people who in their code of morals and methods are as rigid and inflexible as their everlasting granite hills into which the husbandman shoots

Digitized by Google

the seed with a shotgun and blows out the crop with dynamite (laughter); descendants of those devout and aggressive and expansive pilgrim fathers of whom we are told that upon landing upon that bleak inhospitable shore, they first fell upon their knees and then upon the aborigines, who shot tracts and Puritan civilization into those Massachusetts Filipinos without the consent of the Governor, whose cardinal tenet of faith was to keep the commandments and everything else they could lay their hands on (laughter and applause); and we are honored by the presence of these thrifty, trustful gentlemen, who come to us from that other great mart of industry situated at the confluence of the Alleghany and Monongahela Rivers, who, like Israel of old, are led by a cloud of smoke by day, and by a pillar of fire—from their furnaces—by night (laughter); who, in their methods and morals, present us with the strangest of anomalies, for while they are renowned for their uprightness and integrity make iron and steel for a living. (Laughter and applause.) And these are supplemented by those clannish, canny gentlemen from that enterprising meat-cutting, sausage-stuffing, plumb-hammering City of Brotherly Love, whose people, imitating their Quaker brothers, say little, except when moved by some kind of spirits, but saw wood, and make the saws to do it with. (Laughter.) And with these come those ubiquitous gentlemen, whose modesty is only excelled by their good looks, from that cosmopolitan, metropolitan polyglot, all you have got (laughter) city on the banks of the Hudson, where the chief end of man is to glorify the party that is "forninst the Government" and to enjoy holding a job on the foorce forever. (Applause and laughter.)

And here we have met on the common ground of the Old Dominion State, to pay our grateful homage at the shrine of American constitutional liberty, and to mingle with a people of whom, if the immortal dramatic poet were still alive, he would rewrite one of his most famous sentences to read: "Some men and women are born great, some have greatness thrust upon them, and some are born in Virginia." (Applause.)

And from what wrangling school of thought "do we come?" Upon what political platform do we stand? For in the ordinary assemblages of men, the tenets of some party or the dogmas of some sect bring men and women together in conventions of societies and guilds, each one seeking its own end while antagonizing all others; for in the State party strives against party until the peace of the commonwealth ruffles with passion and friends become foes. In the church, sect rails against sect, discordant bells ring out conflicting creeds until we turn upon each other an evil eye because we do not think alike about religion. Then, by way of contrast to those scenes of contention and strife, contemplate the spectacle here presented where brotherly love prevails and every social virtue cements us! There a fat, sleek capon-lined triumphant Republican sits, his arm entwining a lean and hungry Cassius of a Democrat, somewhat disfigured, but still in the ring (laughter); there the calm, calculating brow of a Gold Bug smiles benignly upon the voluble disciple of the unlimited dollars of our daddies, who has just delivered an unanswerable philippic against the crime of '73 (laughter); over yonder, somewhat retired, sits the opinionated "I told you so" Mugwump, who smiles his greeting at a dry, but decorous, Prohibitionist, who in return pledges his undying fealty in a libation of that sparkling fluid drawn from the iron-bound, old oaken bucket, instead of fire water from the little brown jug. (Laughter.) Even ecclesiastical walls are made to fall before the trumpet voice of that doughty chivalric sentinel who guards the sacred portals of our peaceful asylum, for here the vociferous shouting Methodist, or deep-water Baptist from Arkansas, slaps on the back the dignified and austere Unitarian from Boston, and says "Shake, pard, nominate your pison." (Laughter.) In short, the followers of Moses, the disciples of Laud, of Calvin, of Knox, of Luther, of Wesley, of Campbell, of Madame Blavatsky and Mrs. Eddy (laughter), all meet in one common union, in one faith, one hope, and one baptism of good fellowship, and all *agin* every trust except those that we own stock in. (Applause.) And here we have assembled this beautiful morning to inaugurate the tenth annual convention of the Southern Hardware Jobbers' Association, to discuss those men and measures that retard or contribute to our mutual welfare, in the confident hope that wise counsels will prevail throughout our deliberations, enabling us to carry to our homes new points acquired during our delightful sojourn at Old Point.

Before closing this desultory effusion, permit me to felicitate this intelligent association of business men upon the improved financial and commercial conditions of our country, and upon its bright promises of future prosperity. Since our last meeting "grim-visaged war has smoothed its wrinkled front," and all the clouds that lowered upon our houses (in the shape of the enemy's battleships) are in the deep bosom of the ocean buried. I will not presume upon your patient courtesy while recounting the manifold benefits and blessings which have and will inure to us by reason of this event, for they are so manifest as to be potent to each one of this intelligent audience. The South for the past forty years, in spite of the adverse conditions that have retarded its growth and development, has slowly, but steadily, grown in productive capacity as well as material wealth, thus verifying the words of holy writ that the Lord loveth whom he chasteneth. Like that other race of God's chosen people, for forty years we have wandered in our desert pilgrimages; ofttimes cast down by disappointment and failure we have wandered and strayed from the teachings and traditions of our fathers; we have followed too much the devices and desires of designing men, until in the desperation of despair we have set up false gods, we have bowed the knee in adoration at the shrine of a silver calf, but now with an enlightened vision from the heights of Moab we can view our promised land in the dawn of a new and brighter era. (Applause.)

In looking over this assembly I am reminded of the presence of a few who wear hair the color of mine; that some of you, like myself, followed the destinies of the bonny blue flag to the inspiring strains of "Dixie" into the smoke and din of battle, and I rejoice with you that that flag, with all its hallowed associations, is to us but a memory, that we have tenderly folded, with its stars and stains, and reverently laid it away with the times and occasion which gave it birth. I rejoice with you that after the nation had expiated its sin by four years of cruel fratricidal war that the issue of that strife was union, nationality and liberty, and not secession, disunion and slavery. I rejoice with you that later events have obliterated North and South lines, and that nowhere in the United States is there an enemy's country; that an overwhelming enlightened public sentiment has forever buried in one common grave of oblivion the Northern carpet-bagger and the Southern bulldozer. I rejoice with you that on Manila and Santiago's bloody fields the music of the "Star-Spangled Banner" and "Dixie" floated and blended over a united army of the best soldiers and sailors that ever donned a uniform, and that the blending of those war songs has given to us a new one, which is "There Will Be a Hot Time in the Old Town To-night," which presages for our country, for you and for me, a good time in the days that will come.

At the close of our late Spanish war a solemn treaty was concluded at the City of Paris, formulated by some of the ablest diplomats of unhappy Spain and our own fair land in conformity with the constitution and laws of the United States, and in accordance with the laws and usages of all civilized nations. That treaty was formally ratified by the Spanish Cortes, and signed by its beautiful, but unhappy, Queen, was formally ratified by the Senate of the United States and signed by our President, and I confidently believe was confirmed in heaven, thereby giving to us an unquestionable title by conquest, by treaty and by purchase to Puerto Rico and the Philippine Islands, and, if you will pardon a

Digitized by Google

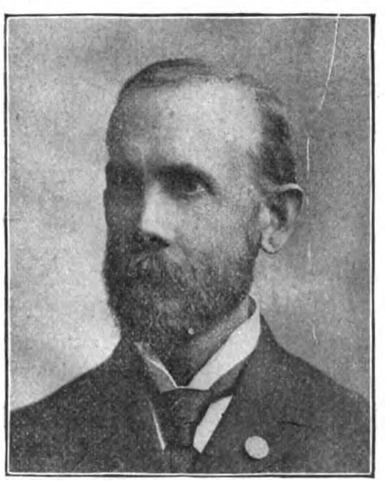
little Jacksonian profanity, "by the Eternal" I believe we will hold every foot of them, and that in the near future the flag of our country will peacefully float over every town and village in that Philippine archipelago. I believe that in the not remote future an enduring and imperishable monument will be erected upon the highest and most conspicuous promontory of that group commemorating one of the most gallant and heroic achievements in the annals of mankind, a monument more enduring than Pompey's pillar at Alexandria, that commemorates the proud boast of tyrants and man's inhumanity to man, higher than the Nelson monument at Trafalgar Square, in London, that commemorates the victories of that renowned hero; more imposing than the column Vendome, in Paris, that commemorates the triumph of a Napoleon, and upon this will be placed a beacon light darting its refulgent rays over those darkened waters, penetrating the gloom of those benighted, misguided people, pointing them to a higher civilization and better life, illuminating their pathway to the paradise of Him who said "Let there be light, and there was light," and upon this we will perch the American eagle, the symbol of liberty, and from its beak a streamer inscribed with the legend: "The United States of America enlightening the world" (applause), teaching the waiting nations the problem of self government and the rights of man, presenting the spectacle of a contented, prosperous and happy people, under the guidance and direction of a Government from the people, and by the people, inspired and sustained by the enlightened wisdom of the highest type of American manhood, comforted, counselled and blessed by that last best gift from God to man—a noble womanhood, as she is personated in our devoted mothers, our loving wives and our sweetest sweethearts. (Applause.) Thus let us, forgetful of all our past differences, turning our backs upon calamity howlers, pessimistic prophets, and all forms of political heresies, renew our allegiance to our beloved country, and its institutions, go forth from this assembly with renewed energy born of higher aims and nobler aspirations, inculcating the lesson in those who are to come after us that under the benignant and uplifting influences of American civilization the world, as it revolves upon its axis from West to East, in all the great essentials of life is becoming wiser, better, happier, more progressive, more forbearing and more forgiving as it rolls, inciting us to live

"For those who love us,
For those that we know are true,
For the Heaven that smiles above us,
And awaits our coming, too;
For the cause that lacks assistance,
For the wrongs that need resistance,
For the future in the distance,
And for the good that we can do."

I thank you, ladies and gentlemen, for your patient courtesy.

The address was listened to attentively, with round after round of applause evidencing every indication of enjoyment. It was delivered in a confident, self-possessed style, thoroughly characteristic of the orator, who is full of his subject; the flashes of wit which pervaded it, the humorous allusions and free and easy applications and illustrations, were all thoroughly appreciated and received in the jocose, fraternal spirit intended by the speaker.

In response to this address of welcome C. W. Asbury, representing the Enterprise Manufacturing Co. of Philadelphia, delivered the following address:



ADDRESS OF C. W. ASBURY.

Mr. President, Ladies and Gentlemen: I would indeed be ungrateful if I did not express a deep and sincere appreciation of the invitation through your Secretary-Treasurer to be with you on this occasion. Appreciation is broadened and deepened by the thought that this is the only organization of jobbers within the scope of my knowledge, which regularly extends a cordial invitation to manufacturers and their representatives, to attend the deliberations of the Association in convention. The heartiness of your welcome to all manufacturers profoundly impresses upon us again the truth of those words so well known in every nook and corner of this great country, "Southern hospitality."

When I received the note from your Secretary-Treasurer inviting me to address you, it seemed to me to be paradoxical that a manufacturer of Philadelphia should have been so greatly honored.

It is true, and I am naturally proud of the fact, that Philadelphia is the largest manufacturing centre in the country, if not in the world, but our city also bears another reputation. Not long since a farmer of Maryland, who had never been further than the boundary of the county in which he lived, finding the weather unfavorable for work upon his farm, concluded to take a little recreation in visiting Philadelphia. A few days after his arrival he met a friend who asked him how he liked the city. He replied: "Very well, very well, indeed, but I do so miss the bustle of the farm."

I might take this opportunity to touch upon the great and wonderfully beneficial work accomplished by the many associations of jobbers in the United States, not only in the interest of the jobbers themselves, but equally in the interests of the manufacturers. No greater or more irresistible influence

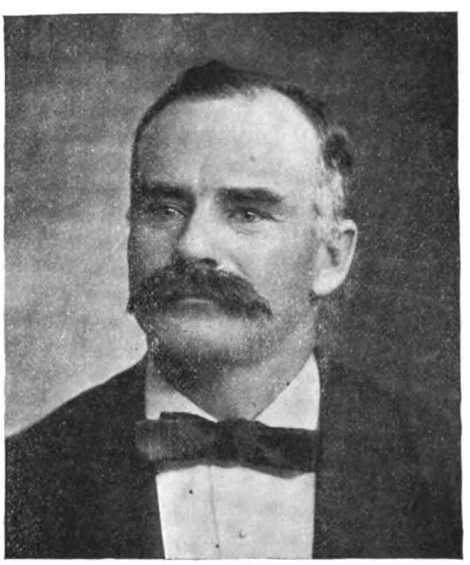
PRESIDENT JAMES D. MOORE, 1900-1901.

could be exerted for the good of the manufacturer than the association and social intercourse among the jobbers North, South, East and West.

The value of business friendship needs no further exemplification than a retrospective and comprehensive view of the Hardware trade of the entire country. Every locality has its Association. Not only is this true of the various jobbers associations, which regularly convene for a discussion of subjects having a particular interest in the respective homes of the organizations, but it is also true of the many retail associations.

Not many years ago it would have been difficult, indeed, to find a section of country in which there was not too much suspicion among competitors to permit of an open and free discussion of matters of interest to all, but now it is almost as hard to find a section in which a successful organization is not at work. The transformation does not end here, but the harmony of the whole is capped by a National Association. These facts are proof sufficient of the great and lasting benefit to business of a friendly feeling among competitors.

I will not attempt to refer to the appreciation of the manufacturers for the excellent example shown them by the jobbers and retailers. Perhaps the intercourse among the manufacturers of certain lines during the past year or eighteen months has been closer than among the jobbers and, in some instances no doubt, has been carried to an unwholesome extreme. After a conference together the manufacturers are apt to ask the great and confiding public to trust and have confidence in their good judgment of methods, but they are



Digitized by Google

decidedly unwilling to trust each other. However, we can leave the settlement of their differences with an abiding faith in the soundness of the judicial decision of the people at large. They are alawys the Court of Last Resort, beyond which there is no appeal.

We producers, who for many years have had you enrolled among our most valued customers, should and do feel greatly honored by your individual and official friendship. We feel under great obligation to your association in common with others, because you have made our business lives easier and happier.

Before the advent of associations, questions were continually arising with the manufacturers as between jobbers. These questions necessitated very diplomatic handling, and sometimes our efforts were rewarded by the loss of the good-will of one jobber, because of his ungovernable dislike of his neighbor. It is hard for us to realize now that such a condition ever existed.

At its best business is fraught with aggravating and annoying difficulties in proportion to our ambitions, but it should be our chief aim to alleviate the unpleasant features by the application of social intercourse. We all know what

VICE-PRESIDENT C. E. SPEER.

a large percentage of our lives is spent in the consideration of business problems.

It is because of the great service you have rendered in prolonging our lives, and making them more peaceful and joyous, that I feel justified in saying in the name of all manufacturers, and in the name of all their families, that we are under very great and lasting obligations.

You, gentlemen, have the honor of residence in the most delightful portion of our land. This is a truth which is being rapidly diffused among all of our people and especially among those who have acquired a sufficiency of this world's goods to permit of investment. Evidence of this is magnificent in the upbuilding of Southern industry. During the past decade the development of God's gifts in iron, steel, coal, limestone, cotton, lumber, turpentine and tobacco has been nothing short of marvelous. The value of cotton goods manufactured in the South in 1880 was about $16,000,000, and in 1890 the returns showed a value of about $40,000,000, a gain of nearly 250 per cent. The publication of the tabulated figures of the Twelfth Census will undoubtedly be a surprising revelation of the vastness of your industrial and commercial activity, and God grant that what now seems to us to be enormous strides of progress may in the next decade prove to have been the creeping and toddling of a child.

After the applause which followed the delivery of Mr. Asbury's address had subsided, Henry B. Lupton, the representative of the American Steel & Wire Co., New York, was called upon to express "The Pleasure of the Manufacturers in Attending the Hardware Conventions," which was accomplished by the orator in his usual happy manner. Mr. Lupton spoke as follows:

ADDRESS OF HENRY B. LUPTON.

Mr. President: The late General Lawton said that when called upon to face an audience he instantly became deaf and blind and speechless.

I may not be as modest a man as was that gallant soldier, at least my modesty has not the same paralyzing influence. I am not deaf to your cordial greeting, nor blind to the fact that I am facing a magnificent audience of representative business men, and in a few words hope to express the pleasure of the manufacturer in attending the Hardware conventions.

Gentlemen of the Southern Hardware Jobbers' Association, we are glad to meet with you. You are here as an organization to discuss matters for the betterment of your trade relations, and incidentally, as you meet socially and with right hearty good fellowship, the asperities arising from sharp competition are forgotten, and you go back to your several homes with pleasant recollections of meeting this one or that one of your competitors, and you will feel that with all his many faults he is a right good sort of fellow after all.

We, as manufacturers, appreciate the kind invitation of your Association to be with you. We are glad to be here, and wish you a most harmonious and profitable meeting.

My fellow manufacturers, I am glad to see you here. It is well for us to meet these men who are so instrumental in the distribution of our products, and discuss with them matters of mutual interest, and as we too go back to our work, and for another year carry on our business with them by correspondence, by personal calls or by our representatives, we will remember their welcome to us here, and should differences arise, as they may at times, these differences will be more easy of amicable settlement as we both remember this meeting at Old Point Comfort.

My fair countrywomen, I am glad to see you here. It has been said, how beautiful upon the mountains are the feet of those who bring us glad tidings. Do you not bring us glad tidings at every moment, at every hour of our existence? Can we ever forget how we turned to our mothers for care and guidance? What tender recollections we have of our boyish loves! How you brighten, elevate and purify our social life. Then in that higher, holier character of wifely love, ay! forever and aye, do you bring glad tidings to our hearts! I, too, am but a guest of this Association, but I bid you a cordial welcome.

But a few months ago the bells of New Year's Eve rang out the old year and we now stand on the threshold of a new century.

Let us for a moment consider a few points of our country's progress, a few points of our country's history that have been written in the past hundred years. The century opened on us a weak, struggling Nation of but about five millions. It closes and we have taken our place as the foremost Nation upon the earth with eighty-five millions of united, happy and prosperous people under the portecting folds of the Stars and Stripes. We have seen the sturdy pioneer hew his way through the primeval forests. We have seen him turn the arid plains of the West into fertile lands. We have seen great cities spring up as if by magic. We have seen great discoveries of our mineral wealth and have seen them dug from the bowels of the earth and moulded into the use of man. We have seen our marvelous inventions adopted by the whole world. We saw Morse timidly offer his telegraph to the Government, and now the telegraph wires encircle the earth. We saw the wizard of Llewellyn Park harness electricity and now the Edison lamp illumines all the dark places.

The century has not been one of joy and happiness only. We saw four years of horrible war when brother's hand was raised against brother. Questions that could not find a set-

Digitized by Google

tlement in the halls of Congress were left to the arbitration of the sword.

As a great Southern statesman said, War Legislates! and the questions settled by that war are settled forever. When the sword was sheathed, we saw by the fortunes of war a large part of your fair South almost laid in ruins and many of you had seen the horror of war in its most accentuated form and you were faced with many new and vexed economic questions. We saw you turn with indomitable American pluck to build a new South, and the willing hands of your late foemen were quickly extended to help you and many of them, in fact, cast their lots with you and the rehabilitated New South stands to-day one of the proud monuments of our country's history.

Instead of giving King Cotton all of your devotion, you have found that you had other and great resources. Manufacturing interests were fostered and the busy hum of industry is heard all over the South, and Birmingham has to-day become a rival of mighty Pittsburgh.

All honor to the South and the victory she has won.

With the new century what a future lies before us, for our children and for our children's children; who can prophesy what it will bring forth; but we enter the century with higher ideals and with higher standards, and the words sung by the angel hosts nineteen hundred years ago, "Peace on Earth, Good Will to Men" are to-day as never before a guide for life and action, and the beautiful words of Tennyson find a repose in every heart:

"Ring out the old, ring in the new;
Ring out the false, ring in the true.
Ring in the valiant man and free
The larger heart, the kindlier hand;
Ring out the darkness of the land,
Ring in the Christ that is to be."

Mr. Lupton's address was received with every mark of the convention's favor.

The annual address of the President was next in order, and was delivered as follows:

THE PRESIDENT'S ANNUAL ADDRESS.

Gentlemen of the Southern Hardware Jobbers' Association: It affords me great pleasure to stand here and look into the faces of this distinguished body of business men, many of whom, although my competitors, are warm and intimate friends. This was not the case prior to the organization of this Association, but having met together for the past eight or nine years in annual conventions, where we have exchanged experiences and discussed matters of mutual interest, we have learned to know each other better and have formed strong ties of friendship and good will, which have been so broadened and strengthened each year that we anticipate these meetings with a great deal of pleasure. I am much pleased to be with you on this occasion, and as it is customary for your presiding officer to give an account of his stewardship at the end of each year, I will now endeavor to make a brief report.

Although I have had the honor of occupying the position of President of the Southern Hardware Jobbers' Association only since January last, as you are all familiar iwth the fact that I was elected to fill the unexpired term of Mr. Mandelbaum, who resigned the presidency of your Association last December, yet in this short time the value and importance of our organization in adjusting irregularities both of a local and general character, in promoting not only the commercial interest of the Southern Hardware Jobbers in every way possible, but also in fostering and encouraging more social relations betewen the jobbers as well as with manufacturers, has most forcibly impressed itself upon my mind. I will confess I was at a loss to determine just what points to consider in this address, knowing there were so many matters which have been handled by our Association, many of which have resulted to the mutual advantage of all interested. In making my report I will merely touch upon a limited number of matter which have come up during my administration, covering a period of six months, and will leave all of the details of the year's work to our Secretary-Treasurer, who will give you a full and complete account of all that has been done.

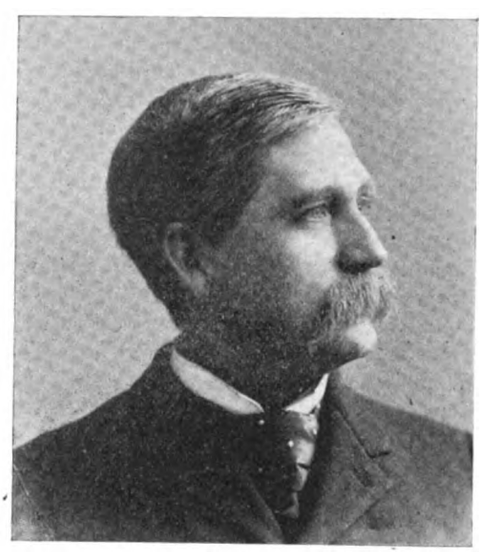
In the first place, I desire to express in behalf of the members of our Association our sincere regrets over the misfortune of Fones Bros. Hardware Co., of Little Rock, Ark., who sustained a severe loss by fire last November, and one of whose officers, J. J. Mandelbaum, has served our Association so efficiently and faithfully in various capacities.

I feel very much gratified to see so large a representation at this our Tenth Annual gathering, and at the same time regret that even one member is absent. I am also very glad to see all of the members of the Executive Committee here, with the exception of C. R. Roberts, who is at present in Europe. I also note that we have several other members who are now in Europe or en route. I congratulate them that the Hardware business has proven so profitable as to enable them to visit the foreign countries. I sincerely wish them a pleasant trip and a safe return.

CHANGED CONDITIONS.

Since our Annual Convention we have passed through a very phenomenal business experience, many radical changes in the iron and steel market have been chronicled, and conditions have materially changed. We have endeavored to meet these changed conditions in as cheerful and practical a manner as possible, but it has been a serious and laborious task, and even now we are anxious and striving for a better solution of the difficulty as to how we shall conduct our business to best meet the changed conditions. The abominable trusts and combinations which have sprung up on all sides in so short a time have been followed with such startling advances and arbitrary and radical terms that it has been impossible to adapt ourselves to the change. You will notice from our programme that it has been thought desirable to discuss these matters in all their phases, and we hope the result of our deliberations will enable us to determine the best and most feasible policy to be pursued under the existing conditions.

TRADE CONDITIONS.



The trade conditions in the South at the present time may be termed peculiar, without additional explanation. The trade as a whole has not accepted as cheerfully as the manufacturers seem to have wished the radical reductions which have been made in some lines, prices of which, in sympathy with the tendency of the market last year, had been advanced to an abnormal point. Those of us who had large stocks which were affected by these reductions were naturally disappointed that the decline came so soon. We fully appreciate the fact that the prices on many lines were entirely out of proportion to the cost of raw material, but the initiative reduction made by the American Steel & Wire Co. was so arbitrary and unreasonable that the jobbers were justly displeased, and while they had to accept the situation, it was under protest. While it is very true that the jobbers have been able to make some money on wire and nails since the formation of the American Steel & Wire Co., yet they were entitled to these profits, and, realizing the fact that the American Steel & Wire Co. practically controlled the production of wire and nails, the jobbers had a perfect right to expect better protection at their hands. This reduction has resulted in a serious loss to many of us, and it only tends to show the importance and necessity of urging all trusts that have it in their power to raise and lower prices without an hour's notice to such an extent as to cause serious loss to the jobber to give a guarantee for a reasonable length of time against declines. The conditions of the iron and steel market and other factors are such as to bring the trade face to face with the fact that lower values are likely to rule, and that a reaction has set in from the extremely high prices which were so rapidly developed last year. It has not been anticipated that any such radical reductions will be made by other manufac-

Digitized by Google

turers as in the case of wire and nails. The necessary reductions in consequence of the decline in cost of raw material and decreased consumption will be announced from time to time, and it is hoped that the market will be kept as steady and even as possible. I would impress upon the jobbers the importance of holding prices as firm as possible, since cutting will only tend to demoralize the market and it is not likely to result in increased sales.

HOME AND FOREIGN TRADE.

The past year was eventful in the history of the iron and steel trade and brought great activity and prosperity and enormous gains have been made in the production of iron and steel products and the increased consumption at home and abroad has been phenomenal. I could give some interesting figures showing the wonderful increase in home consumption and export, but think it unnecessary. The time is coming, and is not far distant, when our nation will take a hand in the contest for the supremacy in supplying the world with manufactured products, when we will make such strides in export business as will astonish the world, just as we have surprised and dumbfounded all nations by capturing the home market. We have learned much from foreign countries in the past, but they are now seeking American methods and

W. E. GIBBINS, MEMBER OF EXECUTIVE COMMITTEE.

appliances for manufacturing, and no doubt there is a great deal they can now learn from us.

FINANCIAL.

Never in the history of the country has the money supply been so great per capita as it is at present. Our capitalists are entering other countries, bidding on loans and securities and looking for profitable investments. The year 1899 was a record breaker in bank clearings. For each month the clearings were much larger than the preceding months in previous big years. The daily average for the year of the leading cities of the United States was $291,846,000, whereas in 1898, the next highest year, the clearings were only $209,249,000, thus showing an increase of a little over 34 per cent. The monetary movement during the last few weeks has excited some comment, although it is not likely to have any marked effect upon the conditions of credit of this country. The money goes abroad to pay no debts, as we have a large European credit in our favor. The export is due simply to the fact that the need of gold is very great in European centers, and the prices offered for it make it an object to the American holders to export. However, the gold will come back when it is needed more here than abroad.

EXECUTIVE COMMITTEE MEETING.

The only meeting of the Executive Committee held convened in New Orleans on the 27th of February, which was as early a date as it was practical to hold the same after I assumed the duties of the presidency. A very interesting and profitable meeting was held, and many of the important questions which were discussed and acted upon have already been placed before you from the Secretary's office. A full and detailed account will be given in the report of the Executive Committee this afternoon.

MEMBERSHIP.

As you will be advised by the report of the Secretary-Treasurer, we have now a membership of seventy-one, the largest in the history of this Association. There are also a number of applications on file which have so far not been accepted. It is likely some of them will be acted upon favorably during this convention, which will increase our membership still further. We have been very careful in considering applications not to make the mistake of accepting any one where there is the least doubt of his eligibility. It is most important at this time that due caution should be exercised along this line. We have become a strong, popular and influential body, and naturally have many applications for membership, some of which we have been compelled to decline.

COMMITTEES.

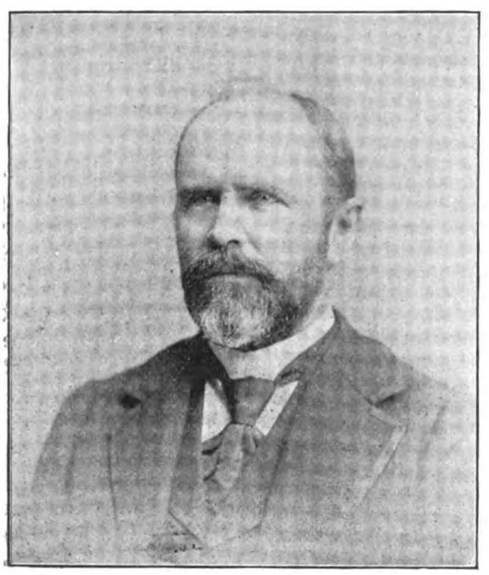
Our Transportation Committee has been especially active during the past six months, and our members should be very thankful for the efforts put forth and the work done by the efficient chairman of this committee, W. E. Newill. He has labored faithfully in the endeavor to induce the Southern Classification Committee to rescind, or at least modify, the unjust and unreasonable classification adopted early in February. In addition to attending the meeting of the Southern Classification Committee at St. Augustine the latter part of March, he has most cheerfully devoted his time and attention since that time to enlisting the co-operation of the Southern jobbers, also of many of the manufacturers, in contending for an equitable and satisfactory adjustment of this classification.

The Grievance, Manufacturers and Membership Committees have not been given much to do, partly for the reason that there have not been many grievances, and also for the reason that the Secretary-Treasurer has endeavored to attend to these matters and relieve the members from such work as far as possible. The reports of these committees will show more fully what has been done or is in course of action.

ASSOCIATION WORK.

It will no doubt be surprising to you to look over the records and see the amount of work that has been done by our Association during the past six months, as shown by the records of the Knoxville office, which has been under the care and attention of our worthy Secretary-Treasurer, whose report will give you full information. Our Association is growing in importance and the work from year to year is constantly on the increase. This Association was organized nearly ten years ago, and has most successfully stood the vicissitudes, depressions and prosperity of the Hardware business during the past nine years, and step by step has advanced in importance, until to-day it is as well known and as dear to the Southern Hardware jobber as our own Southland to the Southern born. Gentlemen, you may well feel proud of your efforts and patience in forming and developing the Southern Hardware Jobbers' Association. Look back eight or ten years and consider the conditions surrounding the Hardware jobbing business in the South, details are not necessary to bring to your recollection the most wonderful changes which have been wrought through the instrumentality of this Association.

REINSTATING FORMER TERMS.



The value and importance of co-operation is shown in the fruitfulness of our efforts in endeavoring to induce certain manufacturers who had changed their terms to 30 days net, to re-establish former terms sixty days or 2 per cent. 10 days. As you have been advised the initiative mover, the American Steel & Wire Co., as well as several others who followed, have restored former terms. We accord due credit to the National Hardware Association, together with the persistent persuasion of individual jobbers, in influencing this desired change. We can reasonably expect all other manufacturers sooner or later to favorably consider our request. I dare say without the persistent efforts of the National and Southern Associa-

Digitized by Google

tions, the manufacturers would not have heeded the individual jobbers of the country.

LOCAL ASSOCIATIONS.

The importance of local associations cannot be overestimated. Quite a number of the jobbing centers throughout our territory have at one time or another organized local

G. W. BARNETT, MEMBER OF EXECUTIVE COMMITTEE.

associations, and many now continue in force and have proven very satisfactory and profitable. They not only bring the jobbers closer together in a social way, but in many instances agreements as to terms and prices have been made which have proven very remunerative. I would recommend that wherever it is possible that local associations be formed. From my own experience I can testify to the fact that many benefits and much profit can be gained. You will note that on Friday morning the question of Local Associations will come up for discussion, and it is my earnest wish that all of our members shall be present and take a part in that discussion.

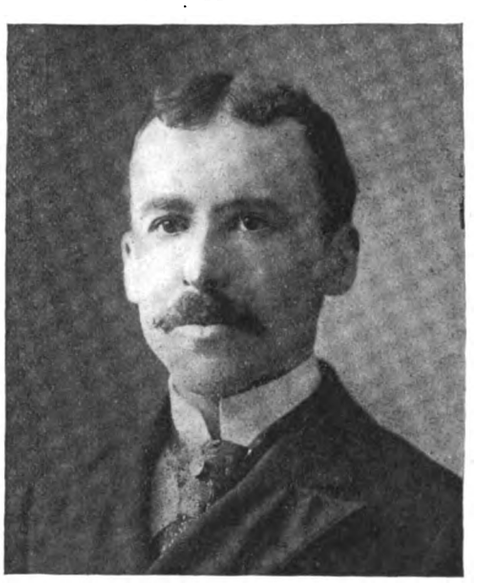
HISTORICAL LITERATURE.

Our members have all doubtless read with more or less interest a pamphlet recently published by the Association entitled "Policy, Potency and Proficiency of the Southern Hardware Jobbers' Association." The desirability of publishing this history was discussed at the Executive Committee meeting in New Orleans. It was decided to have the same printed and distributed, and the results have been all that could be reasonably expected. This little book has not only added new life and increased the enthusiasm of our members, but has been the means of bringing several members into our Association, and by placing it in the hands of outside jobbers and with many of the manufacturers' Southern representatives, much good for the Association has been accomplished.

PERMANENT HEADQUARTERS FOR SECRETARY-TREASURER.

I wish to call attention to the new plan adopted during my administration as to giving our Secretary-Treasurer permanent headquarters. This change met with the full approval of your Executive Committee. There are many good reasons why the office of Secretary-Treasurer should be permanently located instead of being moved from place to place each year. The plan has proven more than satisfactory. I have been relieved of a great many of the details, and while I have kept in almost daily communication with the Secretary, practically all of the work has been done by him from the Knoxville office.

I am indebted to your Secretary-Treasurer, who has most faithfully and efficiently managed and conducted the affairs of this Association. I have found him thoroughly alive and awake to the situation, and I feel sure that each member fully appreciates his faithfulness and ability. I also wish to express my grateful acknowledgment to the very able Executive Committee for their co-operation and support.



NECROLOGY.

I am indeed gratified to report that no deaths have occurred in our organization during the past year. It is not often that an association as large as this can make such a report for two consecutive years. As there were no deaths reported at our last annual Convention, I am inclined to believe that the Southern Hardware jobbers are a long-lived class, destined to hold a life lease on this world longer, perhaps, than men of other sections.

In conclusion, let me forcibly impress upon your members the importance of freely and impartially discussing the events of the past year, and making strenuous efforts to unravel as much as it is possible, the problems and perplexities that are liable to confront us during the coming year. I am also very anxious that all the delegates will not only remain in the Convention Hall during the Association, but that they will unhesitatingly rise and take part in the discussion of subjects in which we are all mutually interested, for it is only in this way that we can arrive at the consensus of opinion, and thus determine upon the proper course of action. We should take pride in developing and promoting to a still greater degree the usefulness of this Association. Let us stand together and give every encouragement and support, as the future is bright and promising. I bespeak for my successor the hearty co-operation so cheerfully accorded me. Gentlemen and brother Hardware jobbers, I thank you.

The address was listened to attentively and the delivery frequently interrupted by applause.

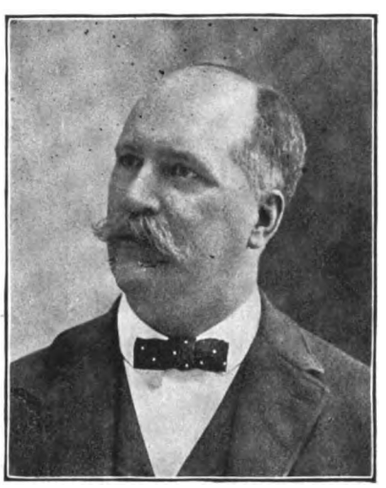
After the report of the Reception Committee, which followed the annual address, and presented in detail the work of the past year, an informal reception was held, where, amid the exchange of congratulations, renewal of friendly greetings and frequent introductions of those new to the convention's deliberations, an opportunity was given for the dis-

W. A. PARKER MEMBER OF EXECUTIVE COMMITTEE.

tribution of a number of souvenirs which had been specially provided by many of the manufacturers, to be given to the delegates present "lest we forget" when we are homeward bound.

WEDNESDAY AFTERNOON SESSION.

This was entirely executive in its scope and purpose, and was devoted to the following business:



Wednesday, June 13th—Reading of minutes of 1899 convention, report of Secretary-Treasurer, report of Transportation Committee, report of Grievance Committee, report of Manufacturers' Committee, report of Membership Committee, report of Executive Committee, appointment of special committees, communications, miscellaneous business, opening of question box, general discussion. Each question limited to five minutes.

Digitized by Google

For Wednesday evening's entertainment the Reception Committee had prepared an elaborate programme for the enjoyment of the delegates to the convention, their guests and lady friends, the guests of the hotel and the officers of the military post at Fortress Monroe, all receiving invitations. It was inaugurated by a band concert given by the band belonging to the post; following the concert, an entertaining vaudeville show was given in the Casino of the Chamberlin, where with the ample convenience afforded by its spacious accommodations, those present passed an hour filled with the entertainment provided. This was followed by a full dress reception, accompanied by dancing, in the ball room, concluding with the serving of refreshments to those participating, the festivities concluding in the hours hovering on the edge of midnight.

THURSDAY MORNING SESSION

was opened at 10.30, and was, in accordance with the programme, an open session, in which all present, jobbers, manufacturers and their representatives, including the ladies, were requested to participate. This was intended to be the manufacturers' innings, and the first to come to the front was James D. Foot, of Kearney & Foot Co., New York, who offered the subject of "The Rambles of a Manufacturer Among Jobbers."

JAMES D FOOT

ADDRESS OF JAMES D. FOOT.

"THE RAMBLES OF A MANUFACTURER AMONG JOBBERS."

Gentlemen of the Southern Hardware Jobbers' Association: It is now some years since I had the pleasure of addressing your body, and what others and I may have said then and what we have said since at similar conventions seems to have about exhausted the vital points of interest among the jobbers of Hardware. It is for that reason that I generalize my subject, as the title would indicate.

A year or more ago I made some arguments before the National Association of Jobbers at Pittsburgh in regard to trusts. Up to the present time trusts have been of doubtful benefit to the jobber, and, as has been said by one of the Western jobbers, where before the buyer exercised some independence in obtaining his goods as to payment for same, terms of settlement, etc., with the trusts this independence has been lost, the jobber being forced to take what the trusts offer in the way of settlement, or leave it.

Witness the reluctance of some of the trusts to grant the time-honored custom of a cash discount, as one of the points jobbers have had to contend with. And yet, in considering this matter of trusts, jobbers themselves, to a certain extent, are responsible for them. A few years ago every jobber, through his buyer, was bringing all his guns to bear on the manufacturer, not to uphold the turning out of a first-class article at a fair margin of profit to the manufacturer so much as to obtaining from that manufacturer, by every known device, a reduction in cost with which he (the jobber) in turn might get at the retailer and meet his competing jobber by a cut in prices, this all resolving in putting the cost of manufacture down to such a point that the manufacturer was confronted with the almost absolute necessity, to either reduce the quality of his goods, or sell out and retire from business. This pressure brought to bear on the manufacturer by the jobber gradually forced the manufacturers in self-preservation to combine each with the other to see if some basis could not be established by which a fair price could be obtained for a first-class article, and a margin of profit remain in the hands of the manufacturers.

Here was the real starting point of the trusts which to-day are proving so annoying to the jobber.

Other points of vital interest to the jobber to-day are covered by the department stores, catalogue houses, etc., and I am of the opinion that this is to be one of the hardest propositions for the jobbers to consider. It is hardly right to the manufacturers that they should be asked not to sell to department stores, or catalogue houses. It is almost legally certain that were the department stores and catalogue houses to take the matter in hand they could force the manufacturers, as companies or trusts, to sell to them at market prices; and it is to a certain extent a fact to-day, that leading manufacturers in any line of Hardware throughout the United States will sell, at some price, to any large catalogue house, or department store that may ask for their goods. The manufacturer may beg the question as to selling them, but were his books in evidence the accounts would probably be found there. I must say in justice to some of these department stores, that they are not the venders of cheap Hardware, which many jobbers contend is what they are placing on the market in competition with the regular trade.

While on a hunting trip to the Rocky Mountains about a year ago, I called on a Hardware dealer in Livingston, Mont., and asked the proprietor "What file do you sell?" to which he replied, "Really, I don't know; I buy most any file that is offered to me when the jobbers come along." Here was a case where certainly the jobbers of the West were not endeavoring to inculcate in that man's mind a desire to sell a first-class article.

Later on, when with my guides in the mountains, I noticed one of them had a well-made hickory axe helve, and I said to him, "Where did you get that helve, I have noticed no hard wood growing here," he replied, "Well, I sent up to Livingston, but you can't ever find anything that is any good there, so I just mailed 33 cents to Montgomery, Ward & Co., of Chicago, and had them send me on the axe helve, which, with postage, cost me just 35 cents, or what I would have to pay for it in Livingston; and I find if I wish to get any first-class article I must send to M. W. & Co. for it.

This illustrates just a little the fact that department stores are not selling only the cheaper class of Hardware; and I know from personal experience that in years past I could sell the house referred to my own brand of files, but nothing special, as their buyer distinctly said, "We wish only well-established, well-known brands of goods; first quality in every way, and do not care for specials." And this man at the same time was placing orders for axes in carload lots, as well as saws, from the leading manufacturers in the country.

When I confronted one of the largest jobbing men in the country as to the position he thought a manufacturer should take in connection with a department store manager of the character above described, he said: "Well, as for me, if I haven't as much 'gray matter' under my hat as any department store manager, I think I'll go out of business." To another jobber I said recently, "How do you take the departure of some well-known houses now selling lines not in the nature of Hardware?" to which he replied, "The day is coming when the jobber must find out what the town in which he is selling goods wants, and if he cannot sell it to the retail Hardware stores, let him take it to the drug store." I then said, "You are virtually becoming a department-store dealer?" and he replied, "Yes; why not?"

And it is surprising how diversified the jobbing Hardware

Digitized by Google

trade is becoming. Some years ago when visiting one of the Hardware stores of the Northwest I was shown one department where with butchers' supplies they had barrel after barrel of sausage cases in brine, with which to make frankfurters and bolognas. A year ago when going through another Hardware house in the West, on one of the top floors I found quite a force of hands devoting themselves to the manufacture of harness, for use in lumber camps, and adjoining this workroom another where there was a well-established manufacturing tin department, and kettles and pans, big and little, were being made for their lumber trade.

With such departures in the Hardware jobbing trade, is it not possible that the jobbers will be forced to come nearer to the department stores and cater to the general wants of a town rather than to one special line of customers in said town? Witness the fact, that within the past fifteen years how the strict lines of the agricultural store, the tin and stove store, the house-furnishing goods, plumber's supplies, and the retail Hardware store have been obliterated. It is now a very common thing to find all of these trades combined under one roof, and known as a Hardware store. If the retailers are developing a consolidation to this extent, is it not possible that the jobbers in turn may be forced to do so?

There is a tendency with some jobbers to turn down a well-established line of goods in order to save perhaps a 2 1-2 per cent. or 5 per cent. rather than be loyal to the manufacturer, as his agent representative. It is hard for the jobber, with competition staring him in the face, to let an extra 5 per cent. go by when, perhaps, he can convince himself that the quality is good enough anyway, and will suit his trade.

I have listened with interest, at various times, to the remarks of some of your members on general points to be accomplished through your coming together as a body, and it should be apparent to any manufacturer that the new ideas advanced as to buying goods have been of direct benefit to the manufacturer as well as the jobber. Also, there have been some eye-openers to many of the jobbers as to the best method of establishing the cost of goods, as well as to the disposal of same.

Your traveling salesmen are not so much bent on reporting every day as to who has made a cut in price, but rather as to what orders they have taken, and at what profit, which, in many instances, is based on their percentage of increase in salary through increased profits to the house they represent. This to the manufacturer's mind has been one of the strongest points accomplished by your Association. Then, again, your conferences on freight matters, as to classification, competing shipping points, etc., have not only benefited the Association, but to a certain extent have been of direct help to the transportation companies.

The question of stocking goods has also received great consideration at your hands, resulting in greater economy to the jobber in not carrying an excess of goods, but increasing his stock on those sizes and kinds for which there is the greatest demand.

But, are not jobbers inclined to be too arbitrary with the manufacturers as to the price that they (the manufacturers) establish in selling to a retailer? For example, they will tell the manufacturer to sell to a retailer at 75 per cent. off; to the jobber 80 per cent., and yet we are aware of the fact that it is absolutely necessary to establish a scaling price as between the small retailer and the largest retailer or small jobber. This the manufacturer claims his right to do, and in turn the jobber contests his so doing.

Again, jobbers will instruct the manufacturer's salesmen that under no consideration must they go to such and such a city, as it is too near him to allow of competition. If a salesman is thoughtful and conservative, and does as requested by the jobber, he fails to establish a connection in this small city, which will be taken by some competing manufacturer, or else by a syndicate buyer, who will, in turn, attach the dealer in the small city to his list, of which the original jobber is a member, thereby making him a competitor of the very jobber who objected to the manufacturers going to that city. This is a case where the syndicate works against the jobber on his list, who wishes to be exclusive as regards a certain amount of territory.

In conclusion, it would seem to me that the few vital points for the manufacturers and jobbers to consider are as follows:

First. That the jobber should extend his line of goods, thereby enabling him to sell to a larger field of trade in any town he may visit.

Second. That when a jobber finds himself in possession of a line of goods, the quality of which gives excellent satisfaction, he should have moral courage to stand by that line even if something else is offered of fairly good quality, at a 5 per cent. reduction.

Third. That jobbers should at all times bear in mind that they cannot sell all the goods made, to all the trade, in all the towns they visit, and that retailers will have their preferences, consequently, if the jobber finds it hard to see a dealer who may be buying from some competitor, he should not attempt to secure the business by cutting prices and sacrificing profits, but rather keep to the safe margin of a good profit, and sell his goods to some one else.

The manufacturer on his part should always look upon the jobber as his oldest and best friend in the market, and, if possible, give him benefits and advantages in the sale of his goods over and above others of more recent growth, whose methods of disposing of goods are of doubtful value, as being to the best interests of the manufacturer, jobber and retailer.

Mr. Foot's remarks received every attention, and the applause which followed, proved that what he said found an echo in the opinions of the many present.

N. A. Gladding, the extremely popular representative of E. C. Atkins & Co., Indianapolis, Ind., was called upon by the president to deliver an address on a mysterious subject which had kept the members guessing. It was called "The Three C's." Mr. Gladding being received by those present with fervent acclaim, spoke as follows:

ADDRESS OF N. A. GLADDING.

Mr. President, Ladies and Gentlemen of the Southern Hardware Jobbers' Association: It may seem to you, as it certainly does to me, considerable assurance, if not presumption, on my part, to come before you with a paper pertaining to the ethics of the Jobbing Hardware business, for the reason that the members of this Association are all broad-minded men, trained in the school of experience, and it is, therefore, not to be supposed that a lecture or disquisition upon any topic relating to your field of work is at all necessary for your enlightenment.

Consequently, it was with much trepidation that I accepted the kind invitation of your officers to speak to-day. I fully realize the great honor conferred upon me in being asked to address such an important body of business men, and I shall be more than gratified if anything that I say may help any one in the smallest degree.

Countless essays have been read before this and other Hardware associations upon almost every subject imaginable connected with the trade, and the same have been "cussed and discussed" to practically a full conclusion, so that it would seem as though there is little left to be said that is new, and yet it is doubtless a fact, that without these meetings and the continuous interchange of thoughts and ideas, the conditions of the Hardware jobbing business might soon relapse from the high standard to which they are now attaining through these mediums, into the very unsatisfactory state which formerly prevailed.

It will be impossible, for lack of time, to enter into a full exegesis of the subject I wish to present to you this morning, and I will, therefore, have to leave much to your imaginations to fill in between the lines.

There are some things existing in this world we all wonder

Digitized by Google

at. There was an old Quaker woman once who said she was quite puzzled about three things. The first was why little boys should throw brickbats and stones into the trees to knock down fruit, because if they would just wait long enough, the fruit would fall anyhow. The next was why men should go to war to kill each other, because if they would all wait long enough they would all be dead, and the third cause of her wonderment was, why the young men should go to call on the young ladies, for if they would just stay at home the young ladies would call on them, so you see that some of us wonder at one thing and some at another, and I find myself oftentimes wondering, why certain people do the things that it does not seem reasonable for them to do. In looking over the list of topics upon which to talk this morning it struck me that there were three attributes, which if lived up to by the Hardware jobber would, no doubt, be a source of both help and profit to him in his business.

The first of these is *courage*. This, it seems to me, is a virtue which can be well adapted to the every day life of any business man. We admire it in the soldier in battle, the explorer opening new lands, the missionary in foreign fields and in the man with the courage of his convictions. The Hardware jobber doubtless finds it necessary to exercise this virtue every day. There are many, many times when it requires courage to keep prices where they belong when the jobber believes that his neighbor is cutting. Now, I take it that the manufacturer who makes a differential in favor of the jobber does so because he believes that he is entitled to it. Does it not strike you, therefore, that the jobber should have courage to sustain such manufacturers?

It also requires a great deal of courage to have faith in the future, sometimes in the face of a falling market, or bad crops, or other evils that come to the lot of man now and then. Briefly, I believe that the courageous man who faces every conceivable condition of trade bravely, will always be in the front rank, while the cowardly merchant is standing still watching the procession pass on.

The next point in my text is confidence. Jobbers meet in convention and talk over every question of mutual interest, ranging from the holding of an established price down to the matter of how to control the office boy, but afterwards what? Have you ever heard any one say "Yes, they have had the annual meeting and everything was lovely and the goose hung high, but now they have all gone home again and there is the same old ——— story to tell." Confidence in each other held sway while together, but she took flight as soon as separation came.

It is, I think, universally recognized that the jobber is a necessity to the many thousands of retail dealers who depend upon them to carry a large stock of goods of almost endless variety from which Mr. Dealer can order as few or as many as he chooses. A legitimate profit, therefore, is the jobber's just due. Why then doesn't he claim this profit? Some do, I know, but why don't they all get it? If the difference between the jobber's price and the dealer's is too great, then I have no doubt but what the manufacturer will gladly accommodate you by making it less, upon the asking.

Is not the main cause of the trouble, if any of this kind exists at all to-day, originated from the mere lack of confidence in competitors? Perhaps in the very man who sat next to you in the convention?

The motto with some people is that of David Harum, "Do unto the other feller the way he'd like to do unto you, an' do it fust." It's the "other feller" that is always doing what he ought not to. We never cut a price, but we are not going to lose our trade. Ah, there's the point. We are not going to let our neighbor across the street or in the next city take our customers away. Well, that is all right as far as it goes, but wouldn't it be better to first find out from Mr. Competitor if he has made a cut, because if he hasn't, then you are in trouble, and it requires some courage to put your price back again where it belongs. Speaking again in the language of David Harum, "It's a good site easier to git a fish hook in, n' 'tis to git it out." Confidence among local houses is certainly a condition to be most earnestly wished for, and this virtue can be exercised with a great deal of advantage, even from a purely selfish standpoint, and it should grow and become strong through such meetings as are held by this Association. There is unquestionably a better state of affairs to-day in this regard than formerly, but there is doubtless some room for improvement.

Consistency is said by the poet to be a jewel. Is it the kind of a jewel that the Hardware jobber is after? I believe that it is, but some of them have a queer way of trying to secure it. There is a saying that wise men sometimes change their minds but fools never, but I am not talking about the question of changing your mind, that is a matter of judgment; but consistency, I think, means not to do what we think wrong for others, and if that is the case it is a jewel that everyone ought to possess, even if it does cost a little money at times. The chances are, however, that he who sticks to the right course will be the gainer.

A Hardware jobber in Mississippi told me once that his neighbor was cutting the price on a certain kind of plow. I asked him what he was doing about it. "Why," said he, "I just let him sell his out as fast as he can at his cut price. When he is through he cannot get any more for the season and I am now obtaining, and shall continue to receive, the regular price for mine after his are all gone." That man had the courage to hold his goods if necessary, confidence in his ability to dispose of them, and was consistent in not doing like the other fellow.

Pardon me for having carried this talk to a greater length than I intended. It has had, perhaps, too much the ring of a sermon, and I am sure you did not come here to attend Divine Service. In conclusion then permit me to say that in my humble opinion the Hardware jobber possessing the three virtues of Courage, Confidence and Consistency, together with what one writer has termed grease, grit and gumption, and the three P's, "Policy, Potency and Proficiency," of this Association, will no doubt live to become a Hardware prince if he has not already reached that stage.

We are all after success. Some will win it, some will fail, but shall we not at least remember the advice of the old English schoolmaster who, in dismissing his graduating class, said:

"Who loses or who wins the prize
Go, lose or conquer as you can,
But if you win or if you lose,
Be each, pray God, a gentleman."

And this reminds me of Bill Johnson's Opinions.

I've allus notissed fellers,
Hit's a risky thing to do
To kalkalate accordin'
To how things look to you.

The man 't talks the nicest
Don't help you uphill;
The one 't prays the loudest
Don't allus pay his bill.

Sometimes the biggest fishes
Bites the smallest kinds o' baits;
An' mighty ugly wimmin
Can make the best o' mates.

The smartest lookin' feller
May be a reg'lar fool;
You're allus kicked the highest
By the meekest lookin' mule.

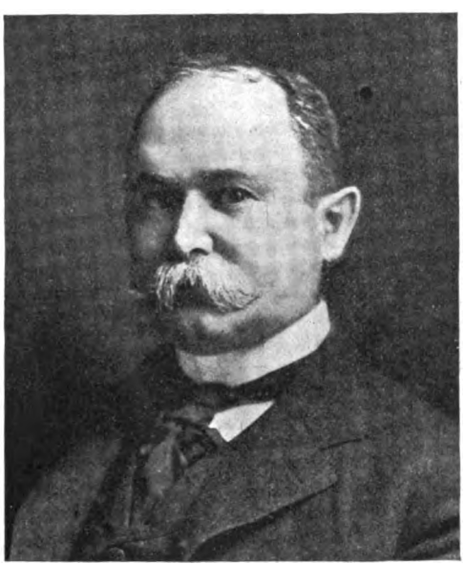
I thank you for your very kind attention and extend to you my best wishes for the welfare of this Association and its individual members.

The subject and its delivery touched the hearts of those present with an appreciation of the orator, who was well rewarded by their approval.

The next manufacturer to respond to the president's call was Fayette R. Plumb, of Philadelphia, who spoke very grace-

Digitized by Google

fully upon the subject of "Terms of Sale from a Manufacturer's Standpoint," as follows:



ADDRESS OF FAYETTE R. PLUMB.

Mr. President and Members Southern Hardware Jobbers' Association: When I received the invitation from your Secretary to appear before you to-day and select my own subject, I had before me, at least, half a dozen remittances where 2 per cent. had been deducted for prepayment, and I was considering whether I should return the drafts or send debit memorandums for the deductions. I, therefore, thought that for a talk of fifteen minutes, no better subject could be selected than

"TERMS OF SALE FROM A MANUFACTURER'S STANDPOINT."

I know this is an unpopular selection, and that it takes some courage to discuss it; but before such an audience as this, I am sure of courteous treatment if I am unable to convince you that I am right in the position assumed.

In the same mail with the acknowledgment of my acceptance of your invitation, I had the pleasure of receiving a letter from Mr. Carter, defining your position; the ablest communication, by the way, that I have received from any source

FAYETTE R. PLUMB.

—and I assure you I have received a great many—and I wish to compliment you upon having such a worthy Secretary.

Mr. Carter stated that he had been informed my attention had been called, by numerous jobbers throughout the country, to the terms upon which my goods were sold, and as I had not acquiesced in these requests, your Executive Committee, at their meeting in New Orleans, had instructed him to take the matter up with me and ascertain if some satisfactory solution of the matter could not be reached so as to follow the 2 per cent. cash, 10 days. The reasons he gave for these demands were:

First: The manufacturers were in a position to grant this without loss, because they could include it in the cost of their goods.

Second: A customer who paid promptly was entitled to extra concessions.

Third: The manufacturers had not been able to enforce change to 30 days, because the jobbers would not pay in that time.

In the first place, I desire to say that I am also a member of an association that thought it expedient, in August last, to make the selling price 30 days net, with no cash discount; therefore, if I were disposed, individually, at this time, to meet your views, I would be powerless to do so without the consent of my fellow members.

"The Meat in the Cocoanut" is embodied in your first statement; namely, that the Hardware jobbers are willing that the cost should be included in the price of the goods.

I believe the jobbers are in a better position to include the 2 per cent. in the cost than the manufacturer, owing to the large variety of goods sold; thus enabling them to increase the prices of articles, the costs of which are not familiar to the trade; while, on the other hand, a manufacturer's lines are much more limited and their customers are so fully conversant with them that an attempt to add an extra 2 per cent. to the price would meet with a vigorous protest.

In reply to your second reason, "That a customer who pays promptly is entitled to extra concessions." Every manufacturer, great or small, appreciates a good cash customer; one who pays his bills promptly in 30 days, and if there are any concessions being made, owing to dull business, the action of a competitor, or, for any other reason, he is sought out by the manufacturer, and, to use a favorite expression, "well taken care of."

The concessions in the manufacturing business have been growing continually for the past thirty years, until they reached such proportions at the commencement of the panic of 1893 that the weight of the burden came very near wiping the most of us out of existence. We grant concessions to our customers that are unparalleled by any other country on the globe.

Take our English cousins, for example, who have always been considered as the leaders in trade the world over. They not only oppose cash discounts, but still charge for package and cartage and, in some instances, postage covering the transmission of their invoices. I saw a bill of this kind in the office of a prominent merchant of New York City early last month, and he assured me he did not receive a single cash discount from any of the foreign houses with whom he deals.

The conditions were the same in this country when I first started in business in the Fall of 1869; then our terms were not only 30 days net, but we charged for cartage and cases, while a freight allowance was not thought of. The cartage was the first to go; then the cases followed, and soon after the freight was included. Most of you, therefore, are buying your goods, laid down at your door, packed in new cases which cost you nothing, you are thus enabled to compete with any one in your territory knowing that your neighbor has no advantage over you.

The days of charging for cartage and cases have passed, and freight, which fluctuates from time to time, and cannot be accurately estimated when making up costs, cannot be considered, owing to the geographical locations of the different manufacturers. Therefore, it was but natural when the manufacturers considered all these questions that they should withdraw the cash discount as one of the evils to be disposed of, as they felt that they should be paid dollar for dollar for their goods, and not in one worth only 98 cents; especially so, as all the items of any moment entering into the cost of their goods are strictly cash. The weekly pay roll must be met without discount on Saturday, while all steel and iron, as well as the majority of all supplies, are net cash, 30 days.

Referring to your third point: "That we could not enforce change from 60 days to 30 days." I desire to say that not 20 per cent. of those who took advantage of the 2 per cent. when our terms were cash 10 days, paid within that time. The honors, therefore, are about evenly divided.

I have made no attempt to indulge in an exhaustive account of the merits of this question; but have endeavored simply to place before you, in the briefest possible manner, the most important reasons why our Association considered themselves justified in their action. As you are, doubtless, aware the steel makers have changed their terms from 3 per cent. 30 days to 30 days net. We are, consequently, compelled to pay net cash for our supplies. I, therefore, think you will agree with me when I say we are justified in desiring net cash for our products. Of course, the jobbers have just as much cause to ask for a discount on their purchases, because they grant it to their customers; but they certainly have no greater

Digitized by Google

SOUTHERN HARDWARE JOBBERS' ASSOCIATION, JUNE 13th, 14th, 15th, 1900. PHOTOGRAPHED BY PRINCE, OF WASHINGTON, D. C.

Digitized by Google

cause; while I have shown that the very reason why they claim that the manufacturers could grant them this discount without loss applies with greater force to them. Their prices are not so firmly fixed, while ours are nearly uniform, and our trade is built up, not by cutting each other's prices, but on the quality of our goods. None of us, therefore, is in a position to advance prices 2 per cent. in order to include it in his terms. The jobber may not be able to do this either; but he is in a better position to attempt it than the manufacturer. If not, he can, at least, follow our example and abolish it.

The change is certainly bound to come at an early date, as 2 per cent. is entirely too much to pay for prompt cash. This is practically 2 per cent. for 30 days, when the proper rate of interest is half of one per cent.

Our country is rapidly growing, credit improving and the time has come for us to fall in line with the other great commercial nations of the world and abandon the high rates of interest that were necessary during our infancy. The other concessions granted by the American manufacturers, such as cartage and cases, are in the right direction, and it would be well for our foreign competitors to follow our example; but the question of excessive cash discounts is a relic of other days, when to grant credit was to take big risks, and is absolutely inconsistent with our improved financial condition.

In conclusion, I desire to add that I think you are making a great mistake when you agitate a question like this at a time when it is clearly the duty of every merchant and manufacturer to stand together and maintain existing prices.

If your Association and the National Association persist in the course followed since November last, I am afraid you will see the disruption of more than one association and lower prices on all goods.

Mr. President: Before taking my seat, I desire, personally, to thank each member of the Executive Committee for the honor conferred in inviting me to address such a representative gathering of Southern merchants; men who are not only celebrated in the community in which they live, but are known throughout our great country as true Americans.

Although Mr. Plumb's views in regard to cash discounts failed to harmonize with those of a majority in the convention, he was listened to attentively with the hope that he would later see the error of his ways and reform his views.

An interesting address was also given upon the subject of "Road Conditions," by John J. Mapp, of Baltimore, Md., Southern representative of the National Enameling & Stamping Co., from which we make the following selections:

ADDRESS OF JOHN J. MAPP.

When I selected my subject—"Road Conditions"—I had in my mind to briefly detail an account of my experiences and observations while making my many visits to you.

There has been a steady increase in the general prosperity and growth of the South. The industrial activity which is seen throughout the South to-day is but a faint indication of what will be in a recurrence of the years of my commercial itinerary in utilizing nature's abundant blessings for the employment of people and the creation of wealth.

The changes among the trade have been numerous. Many of the firms who were landmarks among the trade for years, and who were in business when I first began to travel South, are out of business to-day. Some have been forced out by competition, and others removed by death. The personnel of these old concerns were of the manly, straightforward, honest, industrious type, but conditions had undergone such startling changes that the fitness of things exacted a recognition of a new era which had already dawned upon the commercial, financial and industrial world. In fact, there are very few of these old-time Southern merchants in business to-day. They have been succeeded by the younger generation, who are bright business men, full of energy and push, well posted, fully competent to hold up their end in buying goods, always at minimum price, and ever on the alert to keep pace with the times. I know of no brighter and better business men to-day, as a class, than the Southern Hardware jobber. They are progressive, energetic and successful merchants.

"Conditions" have changed greatly as to the method of conducting business as compared with former years. The Southern Hardware merchant has recognized this changed condition, and has adapted himself to the situation. Many of them are no longer content with confining themselves to a local territory within a radius of 100 to 150 miles, but are reaching out for business and cover a territory of 800 to 1000 miles. It is a fact, which we may not overlook, that the representative of the local jobber, when at a distance of several hundred miles from the location of his house, is never confronted with that feeling of prejudice which in more or less intensity exists in the mind of the nearby retailer against purchasing close to home, since the retailer in question has had reason to recognize the fact that his own customer or user is suspicious that goods so near by might be available to him also, less the profit added by the retailer. Of course, this is a perversion in the mind of the retailer's customers, yet we cannot overlook the mental attitude of the common people, who, after all, by their purchases, measure the volume of trade.

I have one customer in a progressive Southern city who is selling goods from Texas to Virginia. My experience has been that the further you travel from home the more goods you can sell, and the larger are the sales that can be made. Several of my customers are doing a nice export business with British Honduras, Cuba and Mexico. They have established a regular export department in their business for conducting same.

I find that to cater to the wants of the different classes of trade that they sell in the extended territory that they cover, that it necessitates buying a better class of goods, as different sections use different and better goods than others. By carrying these better classes of goods in stock it has been the means of educating that class of trade, who formerly bought the cheapest goods, to buy a better line of goods. In fact, the Southern trade to-day buy a better class of goods than ever before. The stigma that has so long rested upon the Southern merchants as being distributors of the poorest class of goods, is rapidly being removed.

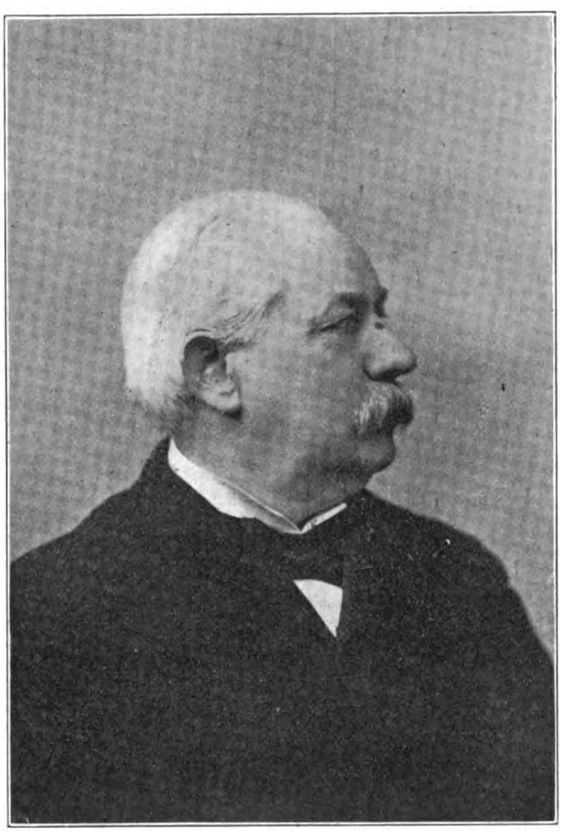
In my particular line, up to five or six years ago, the majority of my trade bought only the staples in the cheapest grade of tinware. * * * To-day they buy almost my entire line, including my most expensive wares. As an illustration of the increase in volume of business done, in one Southern city in my territory caused by the trade buying a better class and more complete line of wares: Ten years ago the trade in that city bought only the cheapest of staples, and their aggregate purchases per annum did not amount to $3000. Last year their purchases exceeded $100,000.

* * *

Where can one travel to find a more hospitable, courteous and gentlemanly set of men in business to-day than the Southern merchants? I always look forward to my visits to you with great pleasure and regard them as much a pleasure trip as a business one.

Gentlemen, with best wishes for your Association, I thank you for your kind attention.

Mr. Mapp was followed by W. P. Smith, of Knoxville, Tenn., the Southern representative of J. C. McCarty & Co., who enlisted the close attention of his audience to an address on "Scrapping for Trade."



ADDRESS OF W. P. SMITH.

This subject, while probably given to the subscriber expecting him to confine his remarks to the traveling fraternity, can be broadened to include not only the traveling man, but apply alike to the manufacturer, jobber, retailer, and I might add, to every branch of business, from the manipulator upon the stock exchange to the bootblack. It is, however, concerning the relations existing between the manufacturer upon the

Digitized by Google

one hand and jobber upon the other, that I desire to briefly confine this letter. The prime object of every business man is identical; that is life, liberty and the pursuit of happiness.

To accomplish this end the manufacturer has the one object in view of disposing of his product for the best figure obtainable, while the jobber has the twofold purpose of not only buying at the least possible figure from the manufacturer, but disposing of that product at the highest possible price. That the interests of both are identical no one will deny. That the means employed for forwarding these interests sometimes differ widely will be admitted by all. To arrive at a just and equitable basis whereby the chief ends of life may be subserved by both parties in interest is a problem which has puzzled the brains of the wisest business heads. With the manufacturer the price of his product is largely controlled by the amount and strength of his competition. So it is with the jobber; but his competitor being also a purchaser and not a producer, a more equitable starting

WEBSTER R WALKLEY.

point is gained, so his profits or losses are largely gauged by his business experience, the efficiency of his help, and the amount of his expense account.

In the case of the manufacturer it often happens that he starts out in his business life with flying colors, and should it appear to the outside world that he is making more than a mere living, he wakes up some morning to find a competitor in the same town with himself, making identically the same article as he; but in order to get established in business, he is naming a price probably ten per cent. lower. What is the result? He makes up his mind to hold his business at any cost to himself, and meets the cut. This "Scrapping for Trade" is kept up until the inevitable receiver steps in and either a reorganization or an indefinite shut-down follows.

The jobber, in the mean time, buys from either one who will sell him the cheapest, and rejoices in the fact that he has bought ten per cent. lower than his last price; but does not take into consideration the old stock which he then happens to have on his shelves, on which he is losing more than the ten per cent., for an article is worth just what it will bring on the day of sale—no more, no less. Prices keep receding, and every time he takes account of stock he finds his accumulated profits swallowed up in shrinkage of values. He also finds that while his stock has decreased in value, that in point of tonnage it has held its own, and that as it is costing him as much to sell a ton of merchandise at the low price as it did at the higher figure, his percentage of cost of doing business has greatly increased.

With this condition existing, along comes the "trust," which is heralded by the jobber as the saving grace while prices are advancing; but when they reach the top notch and start down hill it is cursed alike by saint and sinner. It is generally conceded that the "trust" has not proven a panacea for all the ills incident to commercial life, which it was at first thought to be, and with pending legislation—both State and National—supplemented with existing laws now in force in the great Lone Star State, whereby a wayfaring man (like subscriber), is sent to the State prison for ninety-nine years should he dare to offer any goods for sale which have happened to be made by a trust, it is quite possible that the commercial heads of this great country, both from the producing and distributing branches, will devise other means not quite so distasteful to the rural legislator, for maintaining prices.

Then again there is the "gentleman's agreement," which suits the jobber first rate as long as he has a good stock bought at the old price; but when that stock becomes depleted he patiently waits for the fellow on the outside, or goes to work with might and main to break the agreement.

Mr. Smith's address met with cordial approval from his hearers.

After the reading of the above paper and pending the discussion following, the president called upon W. R. Walkley, of The Peck, Stow & Wilcox Co. His name was received with applause, and the hearty welcome given him by the members of the Association indicated that he was a great favorite among them. His points were well taken; his arguments concise; his address in every way chaste and eloquent; his remarks were punctuated with gratified approval, and he spoke substantially as follows:

ADDRESS OF WEBSTER R. WALKLEY.

I came to this convention intending to keep silence. I am greatly moved by this hearty welcome, and I cannot help responding in a brief word to this warm and spontaneous greeting. Somehow I feel as one of you; as if I were of your number. I cannot forget your many expressions of regard on former occasions. Be assured that I appreciate and fully cherish the memories of the past; and to-day you place me again under new obligations by these warm expressions of your regard.

In regard to the question before you, I have most pronounced opinions. Tyrants may enforce their edicts for a time; despots may rule for a brief hour. Men must submit when there are overwhelming odds against them. Yet, spirits are not subdued. The soul is not conquered. Truth, though crushed to earth, will rise again. Monopolies may control; Trusts may defy for a time the popular will; they may obtain their demands, and may refuse credit to reputable firms who do not abide strictly by their rules; but no law can force, no rule of action can be made positive, unless in accord with popular will. If merchants demand a discount for cash and it is right, monopolies and Trusts will eventually yield to the popular demand. There have been Marathons and Waterloos. Oft through defeat comes surest victories. I see about me many evidences and tokens indicating the good will of manufacturers toward the members of your Association. Many of these are appropriate and beautiful; yet they are perishable. We give you no gilded badges; but the house with which I have been connected for more than a quarter of a century, gives you the imperishable, forever enduring, indestructible, perpetual souvenir—2 per cent. discount for cash. (Great applause.) I am pleased to meet so many young men standing at the dawn of a new century. What vistas open before them. They are strong, full of

Digitized by Google

hope and courage; they are in the heat of the battle and the smell of victory is on their armor; no difficulty in perilous mountain ascents—young men keen-eyed, of sure foot leading the way, and calling out to those following: "All's well." The others ascend in confidence and avoid the chasms and dangers which lie in their path. In the great conflicts about us young men are our leaders. Let them prove their valor and courage, their worth by deeds. We know such deeds will be heroic. The geography of the world is changing; civilization is marching forward with rapid strides. We cannot read our destiny. America has been making great progress, building better than she knew or thought. She has been elevated to high positions among the nations of the earth. She has a loud voice in the Congress of nations. Her wishes will hereafter be regarded, and her will and her arms shall become powers in the advances of the right.

Again permit me to thank you from a full heart for this kind reception and this hearty greeting. May prosperity crown your every effort. May your fields reap harvests, and may your sickles garner all the ripest sheaves of golden grain. Again and again I thank you.

At its conclusion a number of impromptu remarks from various other invited guests followed, the President calling upon those present to add to the interest of the occasion by presenting their views.

President Bindley, of the National Hardware Association, being one of the invited guests, was called upon, and delivered a very interesting little speech, in which he congratulated the Association on the large attendance of delegates which they were able to bring together, and on the interest which all seemed to take in the proceedings. He was listened to attentively and applauded with vigor. He was followed by his natural ally, T. James Fernley, the secretary-treasurer of the National Hardware Association who kept the audience in good humor by his characteristic remarks which were full of the ways of pleasantness, and always to the point.

The subject of cash discounts being called up, the manufacturers present placed themselves on record by passing the following resolution:

MANUFACTURERS' RESOLUTION.

Resolved: That we, the manufacturers present at the Tenth Annual Convention of Southern Hardware Association, desire to place ourselves on record as in favor of a premium of 2 per cent. for payment within ten days of purchase.

As this was done so promptly by the assembled manufacturers, and was unanimously agreed to, the jobbers were then called upon to emphasize the action of the manufacturers by unanimously passing the following resolution:

JOBBERS' RESOLUTION.

Therefore, be it Resolved, That the jobbers present accept in good spirit this resolution as offered by the manufacturers, and in turn will assume and vote by a rising vote to affirm that they will not, under any consideration, ask for the cash discount if over ten days elapse between the time of invoicing and the sending of the check, it being understood that the check or letter bear date of mailing within ten days.

This happy conclusion of the session was voted by one and all to be an extremely interesting one.

During the session, J. A. Hurdle, representing Charles Morrill, requested permission to make a few remarks, which he did, going over the experience that he had had since the death of Charles Morrill in introducing his several specialties to the Hardware trade in the Southern States, dwelling very pleasantly on his travels for the purpose of doing so, and the enjoyable welcome he always received at the hands of the trade, which impressed him so that he desired to present President Barker with a souvenir that he had prepared for the trade jewel department of the Association. This consisted of a set of the "Charles Morrill specialties," handsomely prepared in gold and silver plate, encased in a beautiful morocco receptacle and presenting an extremely handsome appearance. The President received it on behalf of the Association with every demonstration of satisfaction.

THURSDAY AFTERNOON SESSION.

This was a session of executive character, and after the disposal of a number of communications and considerable miscellaneous business, was confined to the discussion of a number of interesting subjects.

W. E. Newill, of the King Hardware Co., Atlanta, Ga., read an interesting paper on "The Best Policy to Pursue Under Present Conditions." He was followed by P. Pidgeon, of the Manogue-Pidgeon Iron Co., Memphis, Tenn., who spoke on the subject of "The Effects of Trusts and Combinations on the Jobbing Business." The interesting discussion provoked by the thoughtful papers above noted, prolonged the session to an hour too late to cover all the work laid out for it, some of which was deferred until the following day.

THURSDAY EVENING'S EXCURSION.

On Thursday evening the Entertainment Committee were enabled, through the courtesy of the Norfolk & Western Railroad Co., to place at the disposal of the convention and their invited guests the steamer *Hampton Roads* for an evening excursion on Chesapeake Bay, which was attended by upwards of 80 of those present. The excursion lasted to nearly midnight. Many points of interest about the bay were passed, the objective point being the United States battleship *Kentucky*. It was a beautiful moonlight night, and the band on board discoursing popular music entirely, found the assembled hosts, guests and others fully prepared to do justice to the familiar tunes from the "Star Spangled Banner" to "Dixie," every one present joining in the harmony with a will. Fraternal feeling everywhere prevailed and the ladies participated equally with the gentlemen in making the excursion a success in every particular. Light refreshments were served, ices and claret punch, etc., and the committee having the matter in charge felt a great degree of pride in the success which attended their efforts. It being a beautiful moonlight night made it an occasion long to be remembered.

FRIDAY MORNING SESSION.

The Friday morning session was a general one, in which jobbers, manufacturers and their representatives participated. It was regarded as an opportunity in which these different workers could ventilate their views, and impress each other with the importance of the convention's deliberations. John Donnan, of W. S. Donnan & Co., Richmond, Va., read a paper of considerable importance upon the subject "Can the Manufacturer Sell a Jobber and Retail Merchant in the Same Territory and Conserve Both Interests?" Among those who participated in the discussion which followed the reading of the paper may be mentioned Messrs. Hurdle, Lupton, Hackney, Kretsinger, Garland, Plumb, Cooper and Miller. Mr. Hurdle, who represents Charles Morrill, the saw set manufacturer, took pleasure in stating to the convention that their great desire was to market their entire product through their friends, the jobbers, and would be pleased to give the convention this assurance.

In connection with this matter the following statement was made by Henry B. Lupton, representing the American Steel & Wire Co.:

I am glad to advise that our general sales agent authorizes me to officially state that the policy of the American Steel & Wire Co. in distributing their products through the hands of the jobbers will be more firmly maintained than ever before, reports to the contrary notwithstanding, and the jobbers' list will be more carefully scrutinized. The company feel that the present differentials to the retail trade are all that will be maintained by the jobbers.

W. A. Parker, of the Beck & Gregg Hardware Co., Atlanta, Ga., was next on the programme to open the discussion on the question of "The Importance of Local Associations," and in pursuance thereof, he read an extremely interesting paper

Digitized by Google

having reference to this feature of the convention's business, which was listened to with interest by those present, and called forth considerable approval.

Following the reading of the paper, the subject was discussed by a number of those present, including B. F. Atkinson, of the Atkinson Hardware Co., Fort Smith, Ark.; Mr. Clark, of the Clark Hardware Co., Lynchburg, Va., and J. D. Moore, of the Moore & Handley Hardware Co., Birmingham, Ala. A very interesting discussion it proved, as those who participated were fully conversant with the desirability to which the subject made reference. This was to have been followed on the programme by a discussion on the subject "Should Manufacturers of Standard Brands of Goods Sell Their Products to Catalogue Houses and Department Stores," but on account of the absence of Thomas W. Fritts, of the Tom Fritts Hardware Co., Chattanooga, Tenn., who was to lead the discussion, the president was compelled to pass it, and the next subject, "Quantity Discounts," was brought before the convention. The discussion was opened by J. D. Moore, Birmingham, who made a very interesting argument in reference to this important feature of the Hardware business. He was followed by W. M. Crumley, of the Beck & Gregg Hardware Co., Atlanta, Ga., C. H. Ireland, of the Odell Hardware Co., Greensboro, N. C., W. E. Gibbins, Woodruff Hardware Co., Knoxville, Tenn., and W. E. Newill, King Hardware Co., Atlanta, Ga. Remarks were also made upon this subject by W. R. Walkley, of the Peck, Stow & Wilcox Co., New York, Mr. Lupton, and Secretary-Treasurer Fernley, of the National Hardware Association, showing the interest which the discussion of this question afforded.

The last topic laid out for the session was "Is the Manufacturer Justified in Soliciting the Retail Trade in a Locality Where He Is Unable to Place His Goods in the Hands of the Jobber?" This discussion was to have been opened by James Moroney, of the Moroney Hardware Co., Dallas, Tex., but he being absent, his argument was read by Secretary Carter. A general discussion followed on this important topic, which was participated in by a number of delegates more particularly interested.

President Barker, at its conclusion, introduced F. A. Converse, of Buffalo, who delivered a short address in the interest of the Pan-American Exposition, asking the support of the members of the Association in order that the advantages of this exposition should be discussed in the various States represented by them, in order that the States should make individual exhibits exploiting the products of each particular State, in the interest of so desirable a cause.

President Barker then, on behalf of the convention, expressed his most cordial thanks to all the manufacturers who had participated in the proceedings, and their many representatives, thanking them heartily for the efforts they had made in enabling all present to achieve the success that was evident on every hand. The session was extended to an unexpected degree, so that it was after one o'clock before the meeting adjourned.

FRIDAY AFTERNOON SESSION.

The concluding session on Friday afternoon was calculated to clean up all miscellaneous business, and the final reports of special committees, which was done; following which, came the election of officers, which resulted in the election of the following:

J. D. Moore, of the Moore & Handley Hardware Co., Birmingham, Ala., president; C. E. Speer, Speer Hardware Co., Fort Smith, Ark., first vice-president.

F. A. Heitmann, of F. W. Heitmann & Co., Houston, Tex., second vice-president.

The members of the Executive Committee for 1900-1901 were named as follows:

W. E .Gibbins, Woodruff Hardware Co., Knoxville, Tenn. G. W. Barnett, Teague, Barnett & Co., Montgomery, Ala. O. B. Barker, Barker-Jennings Hardware Co., Lynchburg, Va. W. M. Crumley, Beck & Gregg Hardware Co., Atlanta, Ga. C. B. Carter, Secretary-Treasurer, Knoxville, Tenn.

REPORT OF COMMITTEE ON RESOLUTIONS.

Resolved: That the thanks of this Association is hereby tendered the President, O. B. Barker, and to the officers associated with him, for their faithful and efficient services in behalf of the interests of the Association during the past year; and we bespeak for the new officers elected the earnest support of every member during the ensuing twelve months.

Resolved: That we hereby express our deep indebtedness to the ladies who have honored the Convention with their presence and tender them our sincere thanks.

Resolved: That we hereby express our thanks to the representatives of the Norfolk and Western Roalroad Co. and the Southern Railroad Co. for the pleasure afforded this Association and their guests by the excursions given, and for other courtesies extended.

Resolved: That we hereby express our thanks to the Hardware press, as represented here; also to all manufacturers and their representatives for their attendance at this Convention, and for the very able papers with which we have been favored by a number of these gentlemen.

Resolved: That we most thoroughly appreciate the pleasant entertainments that have been given by the manufacturers and their representatives through the Reception Committee, of which Irby Bennett was the Chairman, and we hereby tender our hearty thanks for same.

Resolved: That we take great pleasure in expressing our sincere gratitude and thanks to our worthy Sergeant-at-Arms, Henry H. Beers, who has served this Convention so efficiently during this meeting.

Resolved: That we feel our indebtedness to Alan F. Campbell and F. L. Wood, the courteous Manager and Assistant Manaager of the Hotel Chamberlain, who has so efficiently served our wants and made our visit pleasant.

Resolved: That we feel our indebtedness to John Bindley, President, and T. James Fernley, Secretary of the National Hardware Association, who have favored us with their presence and suggestions, and we hereby tender our thanks for same. Respectfully,

FRANK S. GRAY.
T. H. JOHNSON.
W. P. CLARK.

At the conclusion of the election of officers, Irby Bennett, of the Winchester Repeating Arms Co., requested permission to address the delegates, and on behalf of the manufacturers who were present, presented the Southern Hardware Jobbers' Association with a superb silver-mounted gavel, on which were engraved the names of the presidents of the Association from 1891 to the present time. This gavel he hoped would open the proceedings of the eleventh annual convention in 1901. The presentation was accepted by President Moore with the thanks of the Association. The selection of the next meeting place was left for future consideration by the Executive Committee.

The convention adjourned at 4.30 p. m. The following list of names was recorded in the registry book in charge of sergeant-at-Arms Henry H. Beers.

W. S. Tragle, Reading, Pa.; Kearney & Foot Co.
Thos. H. Rose, New York; Livingston Nail Co.
T. W. Gathright, Birmingham; May & Thomas Hardware Co.
Frank Guildener, Baltimore; Sargent & Co.
S. B. Bispham, New York; Russell & Erwin Mfg. Co.
George H. Harper, Baltimore; Clendenin Brothers.
Fred S. Seeley, New York; Wiebusch & Hilger, Ltd.
George W. Lee, Cleveland; Eberhard Mfg. Co.
W. E. Gibbins, Knoxville; Woodruff Hardware Co.
R. D. Carver, Birmingham; Alabama Steel & Wire Co.
R. T. Mead, Petersburg, Va.; Charles Leonard.
Charles Leonard, Petersburg, Va.; Charles Leonard.
Chas. H. Wier, Baltimore; American Axe & Tool Co.
Geo. P. Wier, Baltimore; Wier Bros.
T. J. Jefferson, Petersburg.
Edw. Ingalls, Newark, N. J.; The Atha Tool Co.
E. G. Buckwell, Cleveland; Cleveland Twist Drill Co.
C. F. Carrier, Elmira, N. Y.; Cronk Hanger Co.
W. A. Parker, Atlanta; Beck & Gregg Hardware Co.
W. M. Crumley, Atlanta; Beck & Gregg Hardware Co.
John J. Mapp, Baltimore; National Enameling & Stamping Co.
Chas. R. Wilcox, Baltimore, Md.; American Iron & Steel Mfg. Co.
Paul R. Howard, Norfolk, Va.; The Paul H. Howard Hardware Co.
W. S. Dorman, Baltimore; Baltimore Tack Co.

Digitized by Google

The Hardware trade journals were represented by the following:

R. R. Williams, *Iron Age*, New York.
Henry Hopkins, *Hardware*, New York.
Daniel Stern, *American Artisan*, Chicago, Ill.
W. H. Wilson, *Tradesman*, Chattanooga, Tenn.

SOUVENIRS.

Some of the representatives of the manufacturers were kept busy during the recess between sessions of the convention in distributing the various souvenirs prepared for the occasion, among which were noted:

TROY NICKEL WORKS, Albany, N. Y., large size ornamental tray for knick-knacks. This was attractively nickel-plated and accompanied by a nickel-plated hammer as a special souvenir.

EAGLE LOCK CO., Terryville, Conn., pair gold link sleeve buttons fashioned in the shape of one of their popular padlocks, together with key.

ARCADE FILE WORKS, New York, a well-made morocco pocket-book with memorandum book attached, having a very modest card printed on flap.

BLACKLOCK FOUNDRY, South Pittsburgh, Tenn., morocco card case and memorandum book.

E. C. ATKINS & CO., Indianapolis, Ind., a rabbit's foot handsomely mounted, to be attached to the coat. This was accompanied by a rubber dating stamp, attractively made, with their advertisement.

ONEIDA COMMUNITY, Kenwood, N. Y., a handsome miniature trap, gold-plated, to be worn as a watch-charm.

ATLAS SHEAR CO., Bridgeport, Conn., pair of pocket scissors.

CHARTER OAK STOVE & RANGE CO., St. Louis, Mo., ash receiver.

PAGE BELTING CO., Concord, N. H., leather purse.

BRYDEN HORSE SHOE CO., Catasaqua, Pa., miniature aluminum horse shoe, together with memorandum book.

FAIRBANKS SCALE CO., New York and Chicago, small clock suitable for desk.

OLD DOMINION IRON & NAIL WORKS CO., Richmond, Va., miniature horse shoes made from iron from the *Merrimac*.

A wide distribution of these souvenirs attesting the desire on the manufacturer's part to be remembered, was more of a feature of this convention than any preceding one.

"Comstock's Philosophy."

Did it ever occur to you that the rapid rate at which the world is making progress is creating trouble for those who are to follow us? "The luxuries of one generation form the necessities of the next," says the maxim, and so the additions we are constantly making to the conveniences and elegancies of life are complicating for our children the scheme of existence and adding to their responsibilities. It is as impossible for them to go back to a simpler stage of life as for us to live in the days of our grandsire. We listen in amused commiseration to his tales of twenty-five cent postage, wild-cat money and stage-coach travel. Our children wonder what life could have been like without telephones and trolley cars. The next generation will try to conceive how we lived and moved without motor vehicles and the young sprig of a dozen generations hence will not be able to understand how we could have been content to bump along over the earth's surface and leave the countless paths of the air untraversed. No one of these speculators would any sooner think of reverting to the slower methods of travel than he would of beginning his housekeeping upon the modest scale his parents did.

The pace is quickening in other respects as rapidly as it is in locomotion. Already the amount of knowledge in even the most ordinary sciences makes it necessary for a man who would follow any pursuit to devote himself to one feature of it and become a specialist therein, when he straightway adds to the fund of information and contributes to the difficulties of his successor. If it were not that the new truth so often displaces an error and simplifies an old problem instead of creating a new one, the situation would in time become unsupportable. As it is, there is no wonder that our pedagogues are puzzled to know what to teach, and that in promises advancement; but it is interesting to note, and may be profitable to remember, that the dead nations that rose to highest power displayed their greatest magnificence and wealth just before their downfall, and that if there is any real danger to our national welfare, it lies within our own borders and is born of the home life of our people.—*"The Man in the Corner."*

There are now in the city many business wagons with signs painted on the roof, this being due to the height of modern dwellings, which now-a-days are carried up to five stories or more, from which tenants look down, habitually, upon the top of things, instead of at their sides, as, from less elevations above the ground, they formerly did. So it is a common thing now to see signs on the top of wagons, but there are some signs that seem still more or less novel there, as, for instance, that painted on the roof of the wagon of the traveling mender of umbrellas, who goes about with a workshop on wheels, containing every appliance required for his work. He goes slowly through the block, sounding a gong as he goes. There are other people with gongs and bells, but, if living high in the air, you look down to see who this is, you see painted on the roof of the wagon a saw, a knife, a pair of shears and an open umbrella, and the word "Repaired."—*New York Sun.*

Millions Paid by New York for Signs.

As a knight without a horse is but half a knight, as the old saying has it, the business man of to-day figures he is only half a business man until he "hangs out his sign." It is due to this that signmakers are growing wealthy, and that the city of Greater New York can boast of more than $3,000,000 worth of signs, exclusive of the lettering on office doors. In what is strictly known as the business district, bounded by the two rivers, the Battery and Twenty-third Street, more than $2,500,000 is invested in signs—gilt, bronze, silver-plated wooden, tin and other sorts. Each month represents the addition of thousands of dollars' worth, and as signs are daily becoming more elaborate and correspondingly more expensive, the prospects are that within a few years the signs and billboards of the city will in the aggregate represent a vast outlay of money.

The average person walking through the business districts hardly gives a passing thought to the signs that confront him on all sides, yet in the course of ten minutes' walk it is probable that he passes several thousand dollars' worth of signs. Some interesting estimates on the cost of signs were secured by a *Commercial* reporter from one of the pioneer signmakers of the city yesterday.

He figured that there were over 3000 physicians in Greater New York, each of whom had at least one sign, the average cost of which could be placed at $3, making $9000 worth of signs for physicians alone. Next came the druggists, nearly 2000 in number, whose stores are marked by larger and more elaborate signs roughly estimated as averaging $25 each, or about $50,000. Then came the grocers, butchers and stationery stores to the number of several thousands, all boasting of several feet of signboard, which, according to the authority represented probably over $100,000.

Thus accounting for the "little fellows," the breweries were taken up, and, basing the calculations upon a recent report made by a committee of the Brewers' Association, it was estimated that the breweries furnish over $500,000 worth of signs to saloons each year. Of course, these signs are not irretrievably lost every twelve months, but on the average, accounting for new saloons and those that go out of business each year, the estimate is considered modest. One large signmaking firm, which does most of the brewery sign work, is known to spend more than $60,000 per year for gold leaf alone, while the cost of labor and paint must easily triple that amount. The breweries, as is well known, go into the sign business heavier than any other line, and, in fact, the breweries are responsible for the great advancement that has been made in recent years in sign advertising. One brewery in Harlem is reputed to spend over $100,000 per year in glass and gold signs.

Next to the breweries, the dry goods merchants are regarded the most liberal buyers of signs. One firm, The H. B. Claflin Co., is reported to have as part of its assets nearly $2000 worth of signs, inside and out, while several of the large jobbing houses can boast of almost the same outlay. One large office building on lower Broadway has over $1000 worth of bronze, glass, silver-plated and enameled signs in the rotunda, and this building is a fair sample of 50 others in the same district.

According to E. N. Little's Sons, who are probably the best authorities on the subject, the Wall Street brokers, while they do not go in for large signs, are the best patrons of the signmaker when figured on the square inch basis. Every broker is ambitious to have a bronze or silver sign or at least a brass sign. There are thousands of these signs in the Wall Street district and when it is stated that the ordinary bronze sign, 2x4 feet, costs on an average $25, some idea of what these signs represent in money may be gained.

Another, and probably one of the best illustrations of the extent of the vast fortunes represented in signs on Manhattan alone, may be gained from the fact that the New York Telephone Co.'s signs, familiar to everybody as part of the outside equipment of nearly every drug store, are estimated to represent a cost of over $12,000, while several of the most ambitious patent medicine firms and cigar manufacturers annually expend large fortunes in figure signs and ordinary display signs.

O. J. Gude, a pioneer advertising sign maker, is the authority for the statement that on Broadway alone, from the Battery to Twenty-third Street, over $1,000,000 is represented in signs. Aside from this, touching the strictly advertising sign, or billboard, Mr. Gude figured that the 5,000,000 square feet of wall signs in this city, together with the street car and elevated road and station cardboard signs, cost the advertisers over $750,000 per year.

"People go in for expensive signs to-day," said Mr. Gude, "for the number on the front door does not answer the same purpose it did half a century ago. The business man must have just as elaborate a sign as the man next door has, and so it goes down the block and around the corner. An estimate of the value of signs in New York would certainly go far into the millions."—*New York Sun.*

Origin of Bill-Boards.

There is good authority for the statement that bill-boards first came into use as advertising mediums in London, about 1740. A street crier named Loomis, so the record states, obtained permission from the authorities to erect on vacant lots a number of boards, upon which he placed official advertisements of the city. The boards were constantly surrounded by the populace, who read the announcements instead of hearing them shouted out by the crier. A Jew clothier, with the characteristic shrewdness of his race, saw an excellent opportunity to get before the people an advertisement of his goods and of his business. He applied to Loomis for permission to have his business anouncements placed by the side of those of the authorities. The proposal was referred to the London City Council, and after long debate it was decided that the Jew could have the privilege by paying so much a year to the city. He agreed, and thus the first poster was stuck up. Of course the Jew's example was followed by other merchants, and Loomis, who received a commission for posting, soon had bill-boards all over the city. His business grew to enormous proportions, and he retired a rich man. From that small beginning the custom has spread, until bill-boards are now the most prominent features of civilization.—*Trade Press.*

American locomotives and cars in Egypt call forth from Lord Cromer, the British Minister and Consul-General in Egypt, the following explanation: He says that while the railway authorities prefer adhering to British locomotives, as the men are acquainted with their peculiarities, when time and cost are considered the British manufacturer cannot compete with the American. The latter offers engines, built on standard American plans, at lower prices and in less time than they can be secured from British or European builders. The British manufacturers, on the other hand, not being in the habit of building engines to standard plans of their own, content themselves with tendering on the designs of the Egyptian railway authorities, with the result that these specially made engines cost much more money and take much more time to build.

Citizen—See here, aren't you ashamed to bring us such a contemptible little piece of ice?

Iceman—Naw; you ought to be ashamed to have such a great big barn of an ice chest.—*Ex.*

"Marry you!" cired the widow, "and dear John only dead a month?"

"Oh, well," replied the eager suitor, "he won't be any deader in ten years."—*Ex.*

NEW GOODS AND SPECIALTIES.

Baldwin Searchlight.

A. H. Funke, 101-103 Duane Street, New York, is engaged in manufacturing the Baldwin Acetylene Gas Searchlight, illustrations of which we give in this article. It is a

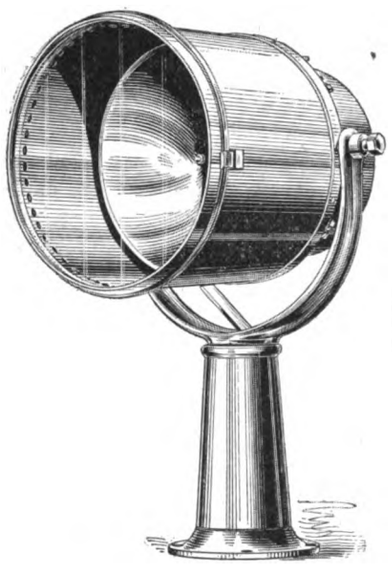

FIG. 1.—ACETYLENE GAS SEARCHLIGHT, FRONT VIEW.

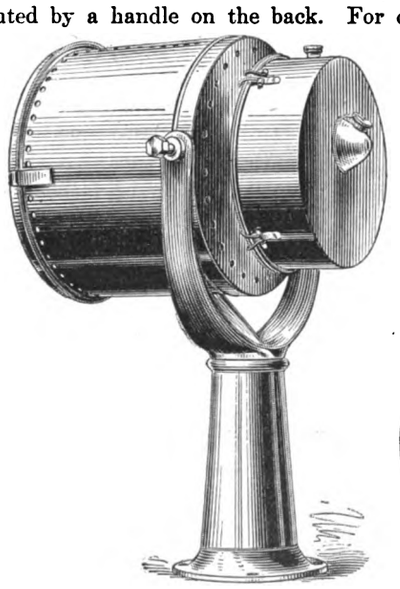
new specialty that has been greatly needed for a variety of purposes, and will meet with considerable approval and extended sale, owing to its simplicity and reasonable cost. It would seem impossible that a yacht would consider its equipment perfect without the necessary protection which a strong light of this character undoubtedly affords in entering a harbor or making a landing on a dark night. It is a self-contained lamp, requiring no extra tank or generator, consequently increasing its popularity by avoiding any odors of the gas in the cabin. It has a reflector eight inches in diameter, and its total height from deck is 16 inches. It can be used in the bow of small launches, and in that case is operated by a handle on the back. For cabin launches an



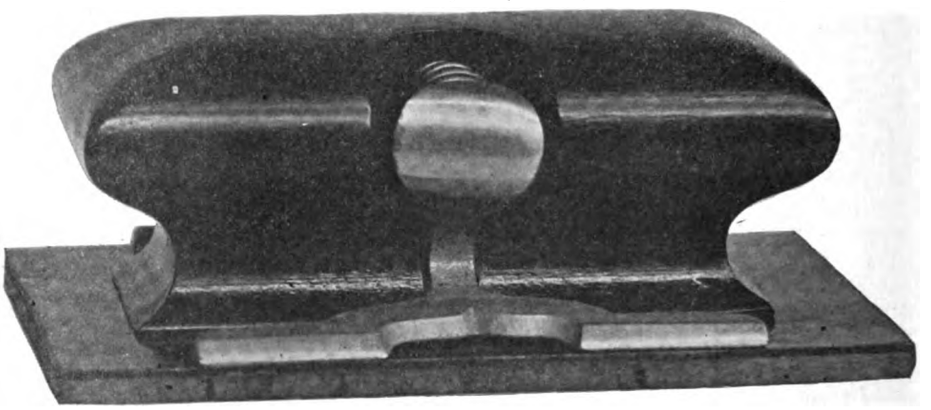


FIG. 2.—REAR VIEW OF SEARCHLIGHT.

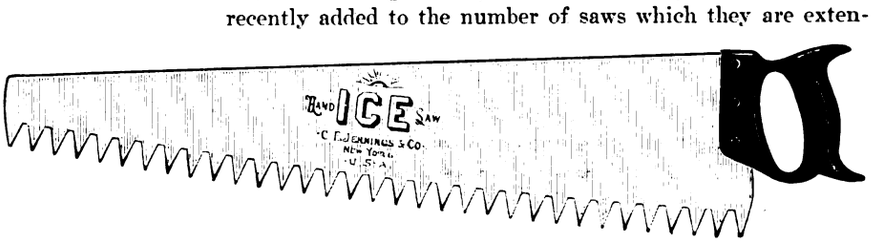
extra attachment is made so that the lamp may be perfectly controlled by one hand, only one handle being necessary to direct the lamp at will of the operator. It is claimed to be capable of illuminating objects 600 feet distant, while the cost to operate the same is estimated not to exceed about a half cent per hour.

Le Prevost's Patent Sand-Paper Block.

T. L. Le Prevost, 1038 Center Street, Racine, Wis., is placing upon the market through the Hardware trade the Le Prevost Patent Sand-Paper Block, which is something entirely new, intended for an excellent purpose, which will be recognized at once by carpenters, cabinet makers, pattern mak-



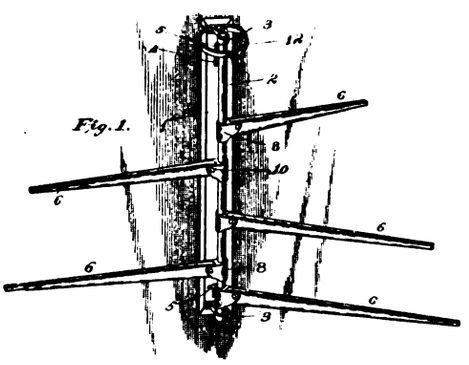
T. L. LE PREVOST'S SAND PAPER BLOCK.

ers, and all those accustomed to the use of sand-paper. It is an extremely useful contrivance for the purpose intended, and one which has been long desired. It avoids in its use the annoyance and inconvenience caused by the grip necessary to keep sand-paper from slipping off, or in fact from the inability to work as close to a projection as is desirable while holding the paper. It will be noticed in this invention, which we illustrate herewith, that these difficulties are overcome by the use of a cushioned base-plate, upon which is mounted a hand grasping device, attached to which are pivoted clamping-jaws, made to conform to the shape of the hand grasp, and held apart by means of spiral springs, which are inserted in the hollow of this part of the block. In applying paper to the base-plate, the paper is inserted under either jaw, then turned over to the opposite side and clamped. The base-plate is cushioned with cork, and constructed so as to last a long time. Any material, such as leather or rubber, can be securely fastened to the base-plate by means of shellac applied to the surfaces, and then clamped with a gentle pressure. The size of the base-plate is 5x3 1-2 inches, which is the most suitable size for the regular stock sand-paper, which is 9x11 inches in size, enabling it to be cut into four equal parts. This is a novel device, and should meet with a ready sale, as no one having had occasion to use it would be without it after a single trial.

Jennings' Hand Ice Saw.

C. E. Jennings & Co., 101 Reade Street, New York, have recently added to the number of saws which they are exten-

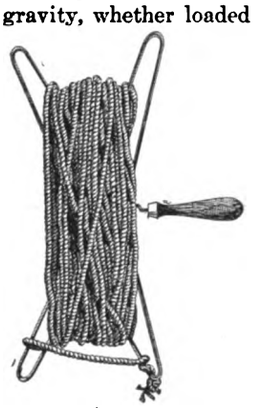
JENNINGS' HAND ICE SAW.



sively placing on the market through the Hardware trade the ice saw which we illustrate. It is furnished with japanned iron handle in order to overcome the rough handling which so useful an article is subjected to, and it is provided with the teeth set and sharpened. It is designed for wagon use, also for hotels using large quantities of ice,

Digitized by Google

packing houses, hospitals and steamers. It is made in 24, 26, 28 and 30 inches, each of the several uses referred to above requiring a different length. The saw is recommended by the manufacturers as being a desirable one from an economical point of view, as its use prevents the waste of ice which is usual when operated upon by appliances not especially intended for the purpose.

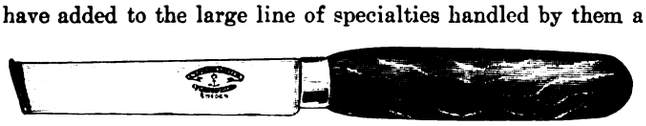


The Daisy Clothes Bar.

Among the numerous housekeeping specialties handled by the Hardware and housefurnishing goods trade, there are

THE DAISY CLOTHES BAR, FIG. 1.

few to recommend by the simplicity of their construction the general utility afforded in the Daisy Clothes Bar, which the Barlow Hardware Co., Corry, Pa., are placing before the trade. It is made of selected hard wood, each backboard being varnished, and all castings are of malleable iron. Each bar contains five fingers, which in their extension provide 20 feet of clothes line. The fingers are so arranged as to slide up and down automatically on a steel rod, which locks itself in any position by gravity, whether loaded or not. It works



DAISY CLOTHES LINE REEL, FIG. 2

readily without friction, and one or more of the fingers may be used as required. It requires very little time to fasten it to the wall, and is guaranteed by the manufacturers to hold up as much as 500 pounds. The bar is four feet in length, and weighs but seven pounds, and when not in use requires but three inches of room in which to retire it. The manufacturers prefer to have live agents or dealers to handle these goods, and would entertain a proposition, giving special privileges or territory, to facilitate which they solicit orders of a single bar for examination and approval.

Lipped Shoe Knife.

The Smith & Hemenway Co., 296 Broadway, New York, have added to the large line of specialties handled by them a

LIPPED SHOE KNIFE.

new line of shoe knives, which includes in its assortment about 200 styles and sizes. They are engaged in manufacturing them in two grades, which are classified as first quality and a medium grade for more general distribution. We illustrate herewith one of the styles to which they desire to call special attention. It is called the lipped knife, and possesses characteristics that are new in connection with this regular line of stock. As this is the season of the year when goods of this character meet with a large and extended sale, the company hope that sample orders of these new goods will be forwarded, in order to test the durability and usefulness of the novelties in this line that are manufactured at the present time.

Ajax Extension Planks and Staging.

Hibbard, Spencer, Bartlett & Co., Chicago, Ill., are the sole distributing agents for the United States of the Ajax Extension Planks and Staging, illustrations of which are

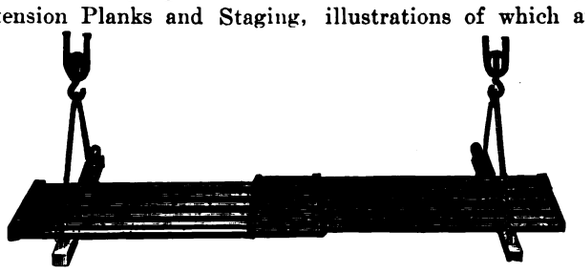


FIG. 1.—AJAX EXTENSION PLANKS.

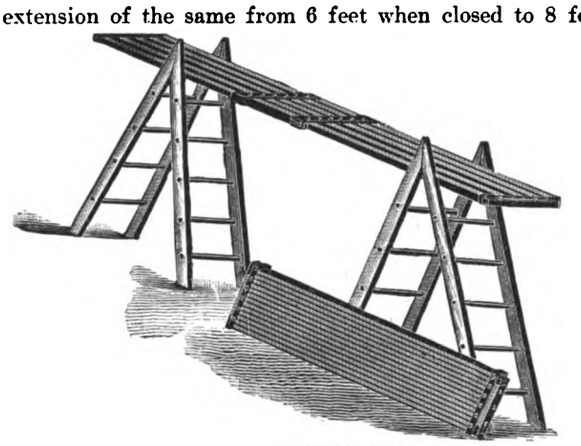
given herewith. They are referred to as being made of finely selected Southern pine, strongly ironed, well riveted and thoroughly inspected as to conditions of safety. The planks are made 10 inches wide, and the staging 18 inches wide, each being manufactured in three lengths in order to enable an extension of the same from 6 feet when closed to 8 feet



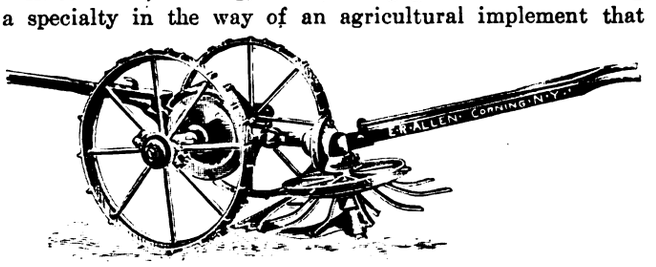


FIG. 2.—AJAX EXTENSION STAGING.

when extended. This is an advantage that will appeal to almost everyone having occasion to use devices of this character. Ordinarily insufficient care is given to platforms used for mechanical purposes, which lack of attention is overcome by possessing an article similar to this we are now describing. Among the points of excellence which are referred to may be mentioned that they can readily be adjusted to fit any space; they will not warp under any circumstances; they always lie even, and afford a firm footing; they are lighter in regard to weight than a plank of equal size could possibly be; and they are very strong and durable and can be carried readily up any stairway.

"Boss" Potato Digger.

E. R. Allen, Corning, N. Y., is engaged in manufacturing a specialty in the way of an agricultural implement that

"BOSS" POTATO DIGGER.

seemingly commends itself to the Hardware and implement trade. It is not claimed to be a new thing, but it has been so thoroughly tested in all kinds of soil and under all conditions that it has become extremely popular and yet its ex-

Digitized by Google

istence is not generally known to all the trade. It is intended to be handled with two horses, and weighs about 500 pounds. It is so adjusted in its construction that the operator can dig every row and deliver them on one side of the field, thus making it extremely easy to pick them up. It will also dig on uneven surfaces, and on side hills, as well as on a level, making in each instance a complete separation of the tubers from the soil and weeds. The necessary strength to increase its durability and enable it to do good work on stony ground is considered in its construction. The manufacturer will be pleased to communicate with any one in the trade desiring to handle this specialty, being able to furnish convincing testimonials from those who have tested its utility.

Peerless Laundry Bucket.

The Peerless Cooker Co., Buffalo, N. Y., in addition to a number of specialties of great utility, are manufacturing the Peerless Laundry Bucket, which we present herewith. This bucket is made of heavy galvanized steel, being intended for light laundry work, intended to be used any day in the week between wash days, while at the same time it will answer the purpose when necessary of a common pail, wash boiler, wash

PEERLESS LAUNDRY BUCKET.

tub or even wash board. It is provided with a zinc wash board built into the bucket, and forming part of it, and is not put in separately. This unique feature will be noticed in the illustration, and greatly increases its utility for the more limited service in the way of laundry work to which reference is made.

Famous Swords

We noticed with regret that the description of the sword of honor presented to the Sirdar, though they show that the weapon is in every way perfect and splendid value for the hundred guineas given for it, contains no mention of any motto or inscription having been engraved thereon, as was the custom of old. It will be recalled that the three swords presented by the Kaiser to his three eldest sons last year bore an inscription, such as, "Thy strength belongs to the Fatherland. To my dear son Wilhelm, Christmas, 1897—Wilhelmus." While the other side bore the following admonition: "Trust in God and bear thyself bravely that thy fair name and honor may be maintained; for he who trusts to God from the bottom of his heart will never be defeated on the field of battle." "Fearless and true" was inscribed on another weapon and on a third, "Never draw this sword without a reason, and never return it to its sheath until honor is satisfied"—which was the Kaiser's rendering of a motto, very popular once upon a time on Toledo blades, which ran, "Do not draw me without reason; do not sheathe me without honor." For a weapon presented by a man of peace to a soldier the legend once engraved on a Ferrara blade, "My value varies with the hand that holds me," would be rather appropriate, but another inscription, "When this viper stings there is no cure in any doctor's shops," would be hardly suitable for one who values his own prowess at so modest a figure as the Sirdar.

Some little time ago it was announced in a contemporary that the "sword of ceremony," made by Professor Herkomer, which is to be used at Welsh Eisteddfods of the future, was the "largest sword on record," and, doubtless, if placed in the hands of a modern Godfrey de Bouillon—who, it will be recalled, with a two-handed sword cleaved a Turk into halves from shoulder to the hips—its six feet two inches in length would be quite long enough for any one who had a business engagement with it. But, although it exceeds by two inches the thirty-pound (avoirdupois) weapon used by Henry the Pious, Duke of Silesia, and is probably more lengthy than the famous two-handed sword of Archibald Bell-the-Cat or Exeter's sword of state, it is still ten inches shorter than the seven-foot ceremonial sword, weighing eighteen pounds, that was made in Westminster Abbey.

On the occasion of George III.'s coronation the sword of state, says Horace Walpole, was forgotten—they do these things better nowadays—and the lord mayor's was borrowed for the occasion. Although nothing is said concerning its identity, undoubtedly it would be the celebrated pearl sword that was utilized.

"There are four swords," said a writer at the beginning of the century, apropos of the Lord Mayor's—"the black, used on Good Friday, 30th of January, Fire of London and all fast days, when his lordship ought to go to St. Paul's; the common sword, to go to sessions, courts, of aldermen; * * * the Sunday sword; and the pearl sword, which used to be carried on very rare occasions only, but is now exhibited at any time." The office of sword-bearer at that time was a valuable one, the last holder of the post purchasing it, giving £7000 for the office, which he could have sold for £9000, "but was prevented by the corporation," who made it a gift place. Beside apartments in the Old Bailey and other privileges, the sword-bearer derived emolument from granting admission to two galleries during the sessions.

Apropos of the sword of state, we learn elsewhere, with regard to the coronation of Her Majesty, that "the Queen, riding up and going to the altar, offers the sword there in the scabbard, delivering it to the archbishop, who places it on the altar; the queen then returns and sits down in King Edward's chair, and the lord who first received the sword offereth the price of it, and having thus redeemed it, receiveth it from off the altar by the Dean of Westminster, and draweth it out of the scabbard, and carries it naked before Her Majesty during the rest of the solemnity." Lord Melbourne was the sword-bearer at the coronation, and the price of redemption of the sword, as was always customary, one hundred shillings.

Of gorgeous swords which are not so much weapons as settings for precious stones the most valuable in England is said to be the one presented by the Egyptians to Lord Wolseley, and valued at £2000; but this sum is comparatively little for a bejeweled sword if the value of the sword brought over to Europe by the late Shah of Persia on his first visit—namely, £10,000—can be taken as a standard of what a diamond-hilted weapon ought to cost. Those who can recall that wonderful saber will be somewhat skeptical about the existence of the Gaikwar of Baroda's gorgeous blade, which is supposed to be worth more than twenty swords of equal beauty and value to the Shah's; but it is popularly supposed that the diamonds, rubies and emeralds with which it is thickly incrusted bring up its value to about £220,000, which at 4 per cent., would represent an income of almost £9000 a year, and renders the possession of such a sword something more than a mere luxury.— *Chambers' Journal.*

"And what has your college education done for you?"

"Well, I'm on the motorman's waiting list out at the street car barns."—*Ex.*

Mrs. Lots—Hasn't that man next door got a mortgage on his place?

Mr. Lots—Yes, indeed, he has.

"Why does he refer to the property as a parcel?"

"Because it's tied up, I suppose."—*Ex.*

REVIEW OF THE MARKETS.

Hardware: The feeling of uncertainty prevailing in regard to prices in all trade channels, has the natural effect of limiting purchases to the ordinary requirements of a moderate demand. The vacation season is already being allotted, with the certainty of no pressing demands during July and August to seriously interfere with restful anticipations. The season on the whole, will be remembered as having been a satisfactory one, and the gradual tapering down of excessive prices for standard goods, will not result as of old in losing the profits of one season by the serious declines of the one succeeding.

Wire Nails: A very moderate demand exists for this leading staple at the present time, as the dull season is rapidly approaching when large orders possess no temptation to the cautious dealer. Prices are firmly held, however, and the indications are that few, if any, changes will disturb the dullness of the next month or two.

Quotations are as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. off in 10 days:

To jobbers in carload lots	$2.20 base.
" in less than carload lots	2.25 "
To retailers in carload lots	2.30 "
" in less than carload lots	2.40 "

New York prices, under a very irregular demand, are maintained fairly well, as follows:

To retailers, carloads on dock	$2.48 base.
" less than carloads on dock	2.61 "
Small lots from store	$2.65 to 2.70 "

Cut Nails: The very moderate demand for cut nails would argue that a lower price is anticipated by the dealers handling this product. It is evident that no change of moment has been made, under the belief that the present prices on wire nails would probably reach a higher scale at an early date. A change in terms to agree with those to which the market on wire nails is subject, is also hoped for, as the dealers are most of them compelled to concede the more favorabel terms of "2 per cent. ten days," without the ability to obtain it for themselves. Quotations are as follows, f. o. b. Pittsburgh, terms 30 days, 1 per cent. off in 10 days:

Carload lots	$2.05 base.
To jobbers in less than carload lots	2.10 "
To retailers in less than carload lots	2.20 "

New York Prices.—There is only a light demand for Cut Nails noticeable during the past fortnight. Orders being confined to limited lots for immediate shipment. Prices remain as follows:

To jobbers in carload lots on dock	$2.23 base.
" less than carload lots on dock.	2.28 "
To retailers in less than carload lots on dock.	2.41 "
Small lots from store	2.50 "

Barb Wire: The market on this seasonable staple has been moving along with considerable activity since the decline in prices two months ago, but the end of the season makes the demand a light one and summer dullness is likely to prevail to a considerable extent for some time. Quotations for domestic trade are as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	$2.50
" " Galvanized	2.80
To jobbers in less than carload lots, Painted	2.55
" " " Galvanized	2.85
To retailers in carload lots, Painted	2.60
" " Galvanized	2.90
To retailers in less than carload lots, Painted	2.70
" " " Galvanized	3.00

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

Plain Wire: No very promising importance is given to the present demand in plain wire, ordinary requirements only governing the transactions now prevailing, which are characterized by the quiet conditions at present surrounding all wire products. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. discount for cash in 10 days:

	Base sizes. Plain.	Galv.
To jobbers in carload lots	$2.15	$2.55
" less than carload lots	2.20	2.60
To retailers in carload lots	2.25	2.65
" less than carload lots	2.35	2.75

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS).

Nos.		Galvanized.
6 to 9	Base	$0.40 extra.
10	$0.05 advance over base	.40 "
11	.10 " " "	.40 "
12 and 12½	.15 " " "	.40 "

For even weight bundles, 50 pounds and over, advance price 5 cents per bundle on above.

Files: A meeting of the File Association was held at the Astor House, New York, on Wednesday last, when the prevailing lists and discounts were re-affirmed and a good trade was reported by all the members with every reason for a steady continuance, as during the past season backward deliveries were more noticeable than was desirable. The election of officers for the ensuing year resulted in the re-election of the old officers, as follows:

ELIAS G. HELLER, President.
HENRY W. SCATTERGOOD, Vice President.
COURTLANDT C. CLARKE, Secretary and Treasurer.
Executive Committee:
SAMUEL M. NICHOLSON,
JAMES D. FOOT,
HARRY C. DISSTON.

Chain, Coil, Trace, Etc. During the past 10 days a reduction was made in the manufacturers' prices of Coil Chain. Present prices, f. o. b. Pittsburgh, on full casks are given herewith, 40 cents additional being charged for less than cask lots:

Inch.	Cents per lb.	Inch.	Cents per lb.
3-16	7.90	9-16	3.80
¼	6.00	⅝	3.70
5-16	5.00	¾	3.65
⅜	4.15	⅞	3.55
7-16	4.00	1	3.55
½	3.90		

Accompanying the above were revised quotations in net prices on Trace and Miscellaneous Chains, which cause a reduction of about 10 per cent.

Lead Pipe, Sheet Lead, Etc.: The gradual decline in the price of Lead has caused a further reduction in the prices of Lead Pipe, Sheet Lead, etc., the market is now represented by the following quotations, on the products named, which are subject to the usual discount of 20 per cent.:

	Cents.
Lead Pipe, per lb	5¾
Sheet Lead, per lb	6¾
Tin Lined Pipe, per lb	12½

Linseed Oil: Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels..... 68 cents per gallon.
In lots of 5 barrels or more..... 67 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.
Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 76 cents per gallon.

THE CLEVELAND TRADE.

The methods adopted by the large combinations have not proved satisfactory to those who do business with them. Americans are not accustomed, when they wish to purchase

Digitized by Google

goods, to send in their card and get in line to wait their time to see the one in authority.

Buyers have been in the habit of meeting the man who had the goods to sell, or his agent, who had authority to make contracts, and the present methods do not please them.

Too much time is required for correspondence; there seems to be a lack of feeling of responsibility or desire to accommodate. If the "don't have to" feeling causes this, it will be fatal to any good understanding between buyer and seller.

The trade have been patient, believing that time would adjust methods to a satisfactory basis, but they are beginning to feel that the difficulty is inherent in the system.

Local trade can be handled in the vicinity of the mill more satisfactorily than it can from a distant office. The efficiency is greatly impaired by attempting to handle a large number of mills from one office, with supervision in the personal interest of the management lacking. Disintegration of the large combines will be welcome unless the methods of handling business can be speedily improved.

The mail is constantly filled with complaints from customers which jobbers feel are justified, but which they are powerless to remedy.

Trade is quite as good as could be anticipated under the present conditions and indicates improvement. Nobody expects a collapse. Now that the Ohio Democracy have expressed their loyalty for the Constitution, the country is safe again.

From present indications no Congressional action will be required to destroy trusts, as bankruptcy courts are likely to anticipate them. THE LOCKWOOD-TAYLOR HARDWARE CO.

THE PITTSBURGH TRADE.

We can again report active trade for the first half of June. The retailers are only buying what they need for present sales, but those sales are showing a good absorbent demand among the people and sales are running ahead of last year.

The short crop of grass caused by dry weather during June is reducing the demand for haying tools and lawn mowers, but everything else in the way of seasonable goods is moving out well. Values of heavy goods are now getting to a point where we may expect stable prices and purchases will be made with more confidence. Stocks in the hands of jobbers are rapidly being reduced and they will soon be in the market again. LOGAN-GREGG HARDWARE CO.

THE SAGINAW TRADE.

Business is about the same as usual at this time of the year. We have copious rains, and the crops around this section look well. There is a large acreage of sugar beets, and the hay crop promises to be very large. The lumber trade is fairly good, and the coal mines are all well employed. The fishing is excellent, and many people from other sections of the country are enjoying same. MORLEY BROTHERS.

THE ST. PAUL TRADE.

Since our last letter our condition has not improved, but is growing more serious. From our territory, including the States of Iowa, Wisconsin, Minnesota, North and South Dakota, the same cry is heard—lack of rain and a consequent burning up of crops. It has gone beyond a possibility of good crop, and the only hope now is half crop. We never yet experienced such a dry season.

As far as prices are concerned, we are trying to meet competition, and this means low prices, because everybody is anxious to unload. This seems to be the condition everywhere, and makes it hard to do a comfortable business, but there are good times in store, when confidence in prices will be the rule. C. W. HACKETT HARDWARE CO.

THE OMAHA TRADE.

Despite the prevailing complaint of backward trade on the part of the manufacturers, the distribution of goods from the jobber to the consumer continues in large volume. It is very noticeable, however, that the trade is uneven and spotted on some lines of goods which are held at high figures and on which manufacturers have unreasonably advanced their prices there is no demand whatever, while lines on which the manufacturers have shown a noticeable disposition of conservatism, continue to move along without any noticeable decrease in the demand. The old saying that you can lead a horse to water, but you can't make him drink, is evidenced by the fact that many lines of goods held at unreasonably high prices would probably make a great deal more money for the manufacturer and jobber alike if they were on a basis where they could be sold, for while large profits are very attractive in anticipation, when you fail to realize on them, they are a source of disappointment and loss to all alike.

RECTOR & WILHELMY CO.

THE DAVENPORT TRADE.

Prices are gradually going in the direction that a cow's tail is said to grow. There is a feeling of uneasiness and want of confidence in the market, and jobbers are more disposed to unload than to stock up beyond their immediate needs.

The time for harvest of small grain is approaching. Many retail dealers have not bought and will not buy until the last moment in the afternoon, on account of high prices. When they are ready to buy, they will learn to their disadvantage, and also to the serious inconvenience of their farmer customers, that the small stocks of binder twine in the hands of jobbers have suddenly disappeared.

Notwithstanding values are lower, the footings of the sales columns are larger than a year ago, and collections are satisfactory. SICKLES, PRESTON & NUTTING CO.

THE SAN FRANCISCO TRADE.

Expectancy seems to be in the air. and new quotations tomorrow, next day or any other nearby time wouldn't be a bit surprising to the retail trade, hence timidity and light purchases are tripping along familiarly together.

The first since the big decline in nails early in the season came this week in the shape of a 10-cent drop per keg; likewise a concession on bolts and lag screws of about 12 1-2 per cent.

Conservative purchases, however, do not signify in lagging business; comparatively speaking, there is good movement in local trade, and jobbers pronounce the pulse of the interior trade indicative of fine health.

A few days ago Secretary Smith, of the Pacific Coast Jobbers' Hardware Association, got word that certain consumers were being supplied with nails at "cut rate" price, whereupon he sent around to the retail trade a popular circular letter of reprimand. This characterized the act one of unfairness on the part of some Builders' Hardware distributer and is said to have moved A. C. Rulofson, a front man in the sales department at Baker & Hamilton's, to spring the question as he would meet the retail trade as to "Why Not?" Is there no self-protecting organization among the retail trade of the San Francisco bay cities?

The "Why Not" query was taken up and passed the rounds of the city's retail trade, and no one so far heard from has essayed to respond to the query in any other words than Why Not? As a matter of fact, before there was any materialization of ideas concerning the proposition, a preliminary meeting was being held by F. H. Ellis, President of the Palace Hardware Company; Charles H. Philpott, of Philpott & Alexander; C. A. Bennett, of Bennett Bros., and Frank F. Osborn, President and Manager of the Osborn Hardware & Tool Co. "Why Not" was favorably commented upon by this quartet of prominent members of the retail trade, after which it was unanimously resolved to issue a call to all dealers in retail Hardware lines to rally in the assembly parlor of the Grand Hotel on the evening of the longest day in the year, June 21, that ample time may be had to discuss and take action regarding the matter of forming a Retail Hardware Association of Central California.

Since last report in May the San Francisco Board of Trade has been called upon to adjust for creditors thirty-two cases

of trouble, but only two of these were California Hardware men, as follows: James J. White, of San Jose, was attached, his liabilities being $1265.77. Yet in hands of committee. The second case is that of J. W. Bird, of this city, who has made a cash settlement on a 50 per cent. basis. His liabilities were $985.70. TRADES PRESS ASSOCIATION.

Natural Philosophy.

Fifty years is a long time.

And most men who have been in business fifty years know a great many useless things.

The human mind will really hold only about so much. To some extent it is like a quart cup: If you fill it full of one thing you can't fill it full of something else at the same time.

A man has to be pretty bright and confine his slumbers to his hours in bed if he wishes to keep up with the changes that even five years will bring about.

If he begins his business life when he is twenty-one he will, in fifty years, be seventy-one years old, and no man of seventy-one has the keen intellect, snap, push and energy that he had when he was forty.

I doubt if a man learns very much after he is forty years old.

Certainly the knowledge that he acquires after he is fifty doesn't amount to much.

By the time he is forty he has probably reached a pretty firmly settled state of mine. He is much less susceptible to new ideas. He is less willing to try the experiments that bring wisdom, and he generally jogs along and does business in about the way he has become accustomed to.

After a man reaches a certain age he lives more or less in the past—he ruminates and reminisces. His mind dwells on the cold Winter of '58, and he likes to tell about buying tickets for the first appearance of Jenny Lind. He knows all about the time when Barnum's Museum occupied the site of the present St. Paul (and the past Herald) building. He knows when Tiffany's was down near Chambers Street, and when the Astor House was the swell hotel of New York.

If he is an advertising agent, he has had a lot of experiences with Godey's Ladies' Book and Peterson's Magazine, and he probably has some information about the New York *Star*.

He knows a very great many interesting things and at a social dinner he is a most remarkably useful and entertaining feature, but when it comes to pushing his own or anybody else's business he is distinctly one of the numbers that are back.

Experience is a great thing, but contemporary experience is the sort that is most valuable.

The best thing that can happen to a concern with fifty years' experience is to have about forty of those years deeply buried in oblivion.

The trouble with the man who has had too much experience is that he knows so many things that can't be done.

The young man comes along with the comparatively short term of experience.

He doesn't know enough to know that a thing can't be done.

Why try to stick things with something that doesn't stick? Buy MAJOR'S CEMENT; you know it sticks. Nothing breaks away from it. Stick to MAJOR'S CEMENT. Buy once, you will buy forever. There is nothing as good; don't believe the substituter.

MAJOR'S RUBBER and MAJOR'S LEATHER.

Two separate cements—the best. Insist on having them. ESTABLISHED 1876.

He goes ahead and takes a hack at it.

He attempts the thing which the old fellow knows is impossible—and he accomplishes it—he does it.

It is the experience and the facts of the present that are valuable.

Those of the past are useful only as reminiscences and are interesting then only in proportion to the story-telling ability of the talker. CHARLES AUSTIN BATES.

American Sewing Machines.

Among the very earliest, if not actually the first of American machines and implements to find an extended and large sale in foreign countries was the sewing machine, which came to be exported in considerable numbers in the period between 1860 and 1870. Since then the exports of sewing machines have steadily increased. Other American machines and manufactured products are now exported to many foreign countries, and some of these, it may be, to a greater gross value, but the sewing machine, it is probable, still leads them all in the wideness of its distribution. There is not an important city in which it may not be found, nor a civilized country; and it is sold in many countries that are only semi-civilized. American sewing machines are, in fact, sold literally all over the earth.

In Europe they are sold in every country; and the business there of an American sewing machine concern would be conducted in practically the same manner as here. The territory is divided into districts whose boundaries might coincide with those of a county, or which might be of smaller area, or which might include two counties. At the head of each of these districts there is a general agent, and there are agencies in every city of any size, and in many smaller places as well. Canvassers are sent out, and machines are sold on installments if anybody wants to buy them in that way, just as they would be here.

In India, one American company making sewing machines has 150 agencies, to which number it is constantly adding. American sewing machines are sold in such countries as Arabia and Persia, and in China and Japan. An American soldier, writing from the island of Mindanao, in the Philippines, said that the first and only thing that they found there that showed civilization was an American sewing machine, which they saw used by its owner, in one of the native shacks. The company that made this machine has had an agency in Manila for twenty years, a place of business on the principal street, with a big sign up, just exactly as it would have in New York, or any other city. And canvassers for the company had worked all that region around where the soldier saw the sewing machine, and territory far beyond, and sold sewing machines.

In fact, wherever people sew, or can use a sewing machine to advantage, American sewing machines have been offered and sold; and this not only in traveled countries, but in all sorts of strange and out-of-the-way places as well; in many lands and to people of many tongues; wherever they could use a machine and access to the country was possible. If a new country is settled or parts of an old country opened up to the world's trade, the representative of the sewing machine is there and ready to go in. He has been pushing ahead everywhere from the start, and he is doing just the same now.

Throughout the world the general agents are men who know the people to whom they sell. They may be business men from other countries, but long established in these places where they have settled, or they may be, as is more likely to be the case, natives of their several countries and it may be men of importance where they live. Sub-agents and canvassers are of the native population, or wholly familiar with it. And so to the people of every race in every land the American sewing machine is brought in a familiar way by people who speak their own tongue, and it may be by people they know or whom they know of.

Of the great number of American sewing machines exported, many are hand machines—that is, not worked with a treadle, but operated by hand; there are plenty of people in the world who seem to find it difficult to use head, hands and feet all at once. Even in European countries there are sold many hand sewing machines; and elsewhere in the world, in some semi-civilized parts, the sewing machines sold are almost all, if not, indeed, all of them, hand machines.

A curious illustration of how small the world is, after all, and at the same time the methodical manner in which a great business is carried on, is found in the operation of the installment system in the sale of sewing machines. Suppose somebody in Austria or Russia, or anywhere else in Europe, who had bought of the local or neighboring agent or canvasser on the installment plan an American sewing machine which he had not yet fully paid for, was about to emigrate to America, and wanted to take the sewing machine with him. There would be no trouble about it; he would give notice to the agent and take the machine right along. The local agent sends a notice to the general agent for that territory, who sends word to the New York office of the company, which sends through the proper channels a notice that reaches the agency nearest the point at which the immigrant has actually settled in this country, and the remaining installments are simply cancelled there.—*New York Sun.*

Of 7125 workpeople at the Pullman Company's works there are said to be no less than 4246 who are natives of foreign countries, i.e., 58 per cent. Scandinavia furnishes the larger portion of the foreigners in the works, 1489, the bulk of them being Swedes. The British Empire sent 919, of whom 273 were Canadians and 205 Irish, while 303 were English. Germany (including Austria) comes next with 817, nearly all North Germans. There are 616 Dutch, a very large contingent for so small a country as Holland is. The Latin races make a very poor showing if we except Italy with 106 immigrants. France sent only 9, Belgium 11 and Switzerland, which is not wholly Latin, 20. The remaining 259 men at Pullman are of eight different nationalities, 114 being Poles, 78 Russians, 32 Bohemians and 22 Hungarians.

The Deering Harvester Co., Chicago, Ill., has applied to the division of forestry for a working plan for its 54,000-acre tract of hardwood timber in Southeastern Missouri. This marks what is probably the first attempt of an American manufacturing establishment to employ modern forest methods in raising hardwood timber for its own use.—*Exchange.*

"Bixby was a hospitable fellow."

"Yes, I never called on him without his inviting me to call again."

"Did you have business relations with him?"

"Yes, I was a collector."—*Ex.*

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Chicago, Ill.—The Vanderbelt Hardware Co. has been incorporated; capital, $25,000; general Hardware business. Incorporators—Samuel J. Howe, F. S. Schooler, George F. Ort.

Davenport, Wash.—J. H. Berge.

East Aurora, N. Y.—The Hoole Hardware Co. has been incorporated; capital, $5,000. Directors—Albert J. Hoole, East Aurora; Robert L. Cox, Buffalo.

Greenville, S. C.—The Greenville Hardware Co. has been incorporated; capital, $5,000. Incorporators—N. A. Craig, W. I. McBryde, F. S. Evans.

Santa Paula, Cal.—The Petrolia Hardware & Supply Co. has been incorporated; general mercantile business; capital, $12,000. Incorporators—R. A. Chandler, W. C. Hewitt, L. M. Andrews, C. O. Hewitt, I. P. Brown, all of Santa Paula.

Winona, Minn.—H. Behrens & Co., 58 E. Third Street.

Woodbury, Conn.—Wm. Munson.

Changes and Improvements.

Addison, N. Y.—T. V. Moore has bought the J. H. Roberts Hardware stock and will conduct it the same as formerly.

Alton, Ill.—Mr. Hermon Cole, of Upper Alton, has closed a deal for the purchase of the Hardware store of the late A. L. Floss, on Third Street.

Bay City, Mich.—M. Kinney has purchased the Hardware stock of F. B. Phillips & Co. He will move the goods from his old stand and conduct a general Hardware business at the new store.

Cass Lake, Minn.—George Birch's Hardware store has been moved into its new location near the Elston Hotel.

Canton, Me.—Wilson and Lucien Dearborn, of Boston, who have been in the Hardware business for some time, have sold out their stock to other parties.

Clarksburg, W. Va.—The Williams-Davisson Co., wholesale Hardware house of the East End, has purchased sixteen lots in Glen Elk addition, where a mammoth building will be erected to be occupied by them.

Crestline, Ohio.—E. H. Rex has sold his interest in the Hardware store to W. E. Frye.

Danbury, Conn.—The Hull & Hoyt Hardware Co. having dissolved, the new firm, under the name of Hull Brothers, will soon begin at the old stand.

Elmira, N. Y.—M. B. Heller & Co., have sold their business to G. A. Gridley & Son, who now have possession of the store.

Elmira, Ont.—J. P. Luckhardt has just finished enlarging his Hardware store.

Freeland, Pa.—The Hardware business of the late William Williamson has been purchased by Wm. E. Martin.

Greenfield, O.—E. M. Limes has purchased the stock of Hardware that formerly belonged to J. D. Bishopp.

Hallstead, Pa.—William Colsten has purchased the building at the corner of William Street and Franklin Street. Men have been employed repairing the building, and it will be occupied by Mr. Colsten as a Hardware store.

Leaf River, Ill.—Allen & Reber have moved their Hardware into the building, the second door north of the building they previously occupied.

Lockport, N. Y.—P. Moran & Son will remove their Hardware business to the store formerly occupied by the Oak, on the south side of Main Street, in a short time. The store is being refitted.

Little Valley, N. Y.—W. C. Parker has sold his business to Cowlesville parties and will retire from active business.

Millville, N. J.—J. W. Anderson, of Medford, has purchased the Hardware store of T. B. Somers, and will manage the store.

New Cumberland, W. Va.—I. E. Bender is selling out his Hardware business and will shortly move to Pittsburgh.

New Rochelle, N. Y.—Albert Koentopp, dealer in houshold goods and general Hardware, has removed his place of business from 329 to 249 Main Street.

Ogdensburg, N. Y.—John Barr, the Hardware merchant, has leased the suite of rooms over his store and will have the partitions removed and utilize the whole floor space as a display room for an extensive line of trunks and traveling bags.

Omaha, Neb.—H. J. Lee has taken out a building permit for a six-story and basement brick and iron warehouse at 814-24 Harney Street. It will be 132 by 132 feet and is to cost $80,000. This is for the use of Lee-Glass-Andreesen Hardware Co.

Orange, Tex.—The Sabine Supply Co. have purchased the Hardware and mill supply business of Mount & Talbot and have taken charge. The business will be under the management of A. T. Chenault, formerly with the Howard F. Smith Co., of Houston.

Reynoldsville, Pa.—Work will soon begin on the Hardware building of Hall & Barton, on Main Street, nearly opposite the postoffice. It will be 82 feet deep, 27 feet front and two stories high. The first floor will be used for Hardware and as a general salesroom.

Rockford, Ill.—The Dent Hardware stock and business has become the property of Mrs. W. H. Dent.

Saranac, Mich.—The Hardware firm of Benson & Croford has sold out to M. A. Benson & Co. The new firm will erect a fine store building.

Saranac Lake, N. Y.—The firm of Walton, Starks & Co. has dissolved partnership. The firm has long done an extensive business, having formerly been known as Walton & Callanan. Some years ago George L. Starks was admitted to the firm and he now becomes the senior member by reason of the retirement of William A. Walton. The firm will now be known as George L. Starks & Co.

Sheridan, Ill.—George Hum has rented the lower room of the Masonic Building and is moving his stock of Hardware, etc., into it.

St. Joseph, Mo.—The Wyeth Hardware Co. have purchased 40x140 feet at the southeast corner of Second and Jule Streets known as the W. L. Distin property. It is stated that the Wyeth people will remodel the building and remove their collar factory there. About $5000 will be spent in improvements, and another story will perhaps be added. Definite plans have not been made as yet.

St. Louis, Mo.—The Simmons Hardware Co. have filed a notice of increase of capital stock from $3,000,000 to $4,500,000.

Torrington, Conn.—John Dwan has begun the foundation for his new Hardware store on North Main Street, below Cooks Bridge.

Vernon, N. Y.—The D. B. Case block, occupied for many years by Charles Hyden, as a Hardware store, is being extensively altered and repaired.

Waterville, Kan.—J. P. Burtis is building an 80 by 44 feet addition to his already large Hardware and implement establishment.

Winlock, Wash.—George Johnson has purchased a half interest in the Hardware business of S. Cavanaugh. The new firm will conduct business under the name of S. Cavanaugh & Co.

Wellsburg, W. Va.—J. T. Jacob is about to retire from the Hardware business.

Business Embarrassments.

Arlington, Mass.—A petition in bankruptcy has been filed by Lewis E. Stickney, plumber and Hardware merchant. Liabilities, $8,664; assets, $5,014.

Cleveland, O.—J. B. Kraus, manager of the Kraus Hardware Co., at 1169 Broadway, has filed a bankruptcy petition in the United States District Court. Mr. Kraus states that his liabilities aggregate $5,130.44 and that he has no assets.

Burglaries in Hardware Stores.

Cedar Creek, Neb.—August Schneider., $85.

Fairfield, Me.—A. H. Totman & Co., $51.

Kenosha, Wis.—H. C. Schulz, $200.

Fires in Hardware Stores.

Bay Shore, N. Y.—The Hardware and oil store of C. W. Vail has been damaged by fire. The loss is estimated at $2,000.

De Lamar, Nev.—Fire completely destroyed Fetterman's Hardware store.

Fort Worth, Tex.—Fire has destroyed the building of the Nash Hardware Co. Loss, $100,000.

Toledo, O.—Geo. Shuck's Hardware store, 420 Summit Street, has been damaged by fire to the extent of $750. Fully insured.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Altoona, Pa.—The Monarch Powder Co. has been incorporated to manufacture all kinds of powder, dynamite, matches and general ammunition. Its capital stock is $50,000.

Altoona, Pa.—The Union Furnace Mfg. Co. has been incorporated; capital stock $50,000. This company will manufacture all kinds of implements and tools. Its capital stock is $50,000.

Augusta, Me.—The New England Hammock Chair Co. has been organized at Lewiston for the purpose of manufacturing and dealing in hammock chairs, with $10,000 capital stock. The officers are: President, T. Lloyd Pratt, of Lewiston; treasurer, Orland P. Mosely, of Lewiston.

Camden, N. J.—Articles of incorporation have been filed in the County Clerk's office by the National Vise & Tool Works. The objects of the corporation are to manufacture, buy and sell vises, tools and machinery. The capital stock is $150,000. The corporators are R. H. Hollingshead, George H. B. Martin and W. T. Eidell.

Carnegie, Pa.—The National Lawn Weeder Co. have commenced the manufacture of their patent weeder.

Charleston, W. Va.—New Century Light Co. has been incorporated; manufacturing and dealing in incandescent gas burners; capital, $1,000,000. Incorporators—G. O. Chilton, J. H. High, C. G. High, J. F. Noyes, F. L. McGee, all of Charleston.

Chicago, Ill.—National Fly Trap Co. has been incorporated; manufacturing fly traps; capital, $25,000. Incorporators—J. E. Murray, W. R. Hartley, W. M. Dodd, all of Chicago.

Danville, Ill.—The Fairweight Standard Scale Co., capital $16,000, James A. Fleming, W. W. Phillips and G. M. McDowell, to manufacture scales, has applied for incorporation at Springfield.

Essex, Conn.—The Rasquiere Explosive Co. has been incorporated; capital stock $1,000.

Ft. Wayne, Ind.—The Bledsoe Burner Co. has been incorporated to manufacture patent burners; capital stock, $12,000. Directors—Nathaniel H. Bledsoe, Alpheus P. Buchman and Louis Ohnhaus.

Goshen, Ind.—The Goshen Rubber Co. has been incorporated; capital stock $100,000. Directors—James M. Denis, Charles M. Bailey, Joseph H. Shoemaker, Alexander McDonnell and Harry M. Zehrung.

Jamestown, Pa.—Pittsburgh and Jamestown capitalists will erect a plant at Jamestown for the manufacture of tools. The company is capitalized at $25,000. Work on the building is to be commenced at once.

Jersey City, N. J.—People's Patent Self-Defense Plow Co. has been incorporated; general business; capital, $70,000. Incorporators—F. M. Goff, J. C. McConnaughey, H. Johnston.

Kent, O.—Kent Chain Co. has been incorporated; manufacturing chains; capital, $5,000. Incorporators—W. A. Patton, C. Mehole, M. G. Garrison, F. H. Merrell, E. E. France.

Marietta, O.—Crown Casting Co. has been incorporated; manufacturing iron pipe, etc.; capital $50,000. Incorporators—N. L. Williams, W. Morris, O. A. Lambert, Lillian Edgerton, Anna M. Wallace.

Portland, Me.—The C. F. Purington Co. has been incorporated to manufacture and deal in window screens and similar articles and patents therefor. Capitalized at $50,000.

Rochester, N. Y.—The Empire Rubber Specialty Co. has been incorporated; capital, $10,000. Directors—Lewis Adler, Oscar J. Katz and Mark L. Adler, Rochester.

San Francisco, Cal.—J. de la Montanya Co. has been incorporated to manufacture and deal in iron, tin, etc.; capital, $450,000. Incorporators—Mrs. S. J. de la Montanya, J. de la Montonya, Miss S. J. de la Montanya, D. S. Dorn, all of San Francisco; J. M. Dewitt, of Alameda.

St. Louis, Mo.—Udell-Samson Woodenware Co. has been incorporated; manufacturing woodenware; capital, $25,000. Incorporators—M. R. Udell, F. G. Udell, J. Samson, Jr., all of St. Louis.

Wilmington, Del.—Hayes Automatic Pump Co. has been incorporated; manufacturing of self-pumping pneumatic vehicle wheels; capital $1,000,000. Incorporators—M. L. Drake, J. P. Dunn, M. E. Archdeacon, all of Boston, Mass.

Changes and Improvements.

Akron, O.—The Consolidated Rubber Co., of New York City, which has a capital of $20,000,000, has purchased a site in East Akron and will erect mammoth shops.

Bellefontaine, O.—Many improvements are being made at the Bellefontaine Hame & Tool factory. A new office building is being constructed and a large addition is being built to the main building. New machinery is to be placed in position and new line shafts hung.

New Britain, Ct.—The contract for building the new addition to Landers, Frary & Clark's cutlery, on Elm Street, has been awarded. The building will be of brick, 140x50, and will be used for the packing and shipping departments.

Columbus, O.—The Gleeson lamp plant will be moved in about two months to Richmond, Ind.

Detroit, Mich.—The Sun Vapor Stove Co. has notified the County Clerk that its capital has been reduced from $100,000 to $60,000.

Fitchburg, Mass.—The removal of the cross-cut department of the Simonds Saw Mfg. Co. to Chicago has been decided upon, and within a few weeks this most important branch of one of Fitchburg's oldest and best known manufacturing industries will be abandoned. The company already operates a large branch factory in Chicago, which is much nearer the centre of its trade, and has ample room there for an increased output. The history of the company dates back to 1832, when Abel Simonds began the manufacture of scythes and edge tools at West Fitchburg.

Oshkosh, Wis.—The Oshkosh Logging Tool Co. is about to make a very extensive addition to its large plant on Pearl Street. Property to the east of the factory fronting on Pearl Street has been purchased from Battis Brothers and a three-story building 40 feet wide and 100 feet deep will be put up, in which machinery that will increase the output of the concern about 50 per cent. will be installed.

Pittsburgh, Pa.—The L. Gerber & Sons Tool Mfg. Co., now located on the Southside, will at an early date remove to Allequippa, on the P. & L. E. R. R. The concern will occupy a plant formerly used by the Standard Mfg. Co., containing 3½ acres of land and several buildings.

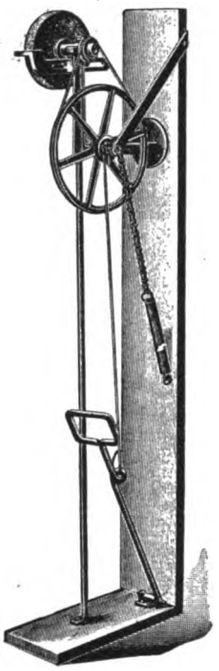
Pittsburgh, Pa.—The Standard Scale & Supply Co. has decided to build a new plant for the manufacture of scales. The decision to have a new plant has been the result of a rapidly developing business. Several sites are under consideration, and one will be selected within a few days.

Rochester, N. Y.—The new three-story addition to the Robeson Cutlery Co.'s plant is being rapidly pushed to completion. The addition is thirty by thirty-six feet. The ground floor will be occupied by the new engine and boiler. The engine is 180 horse-power, and is now being placed.

Sandy Creek, N. Y.—The knife and power house on the end of the dam at Phoenix, together with the water rights connected therewith, have been purchased by J. I. VanDoren.

St. Louis, Mo.—The Ranz-Lambrecht Stamping Tool Mfg. Co. have filed a statement showing increase of capital stock from $5,000 to $10,000.

St. Louis, Mo.—John Boyer & Co., manufacturers of automatic tools, etc., have commenced the erection of a factory at the junction of Second Avenue and the railroad. The structure will be 345 feet long, fronting on Second Avenue, and 180 feet deep, one story high.



York, Pa.—The New York Wire Cloth Co. have broken ground for the erection of a building to be used as an annealing department.

Recent Fires.

Decatur, Ill.—The interior of the Decatur Cutlery Works caught fire recently in a mysterious manner and the entire plant was destroyed, entailing a loss estimated at $60,000.

Verona Design.
Sargent's
Artistic Hardware.

Sargent's VR

or Verona Design is a good design for Hardware dealers to carry in stock. It is specified by many architects and called for by many builders. While the price is low, the design is artistic, well made, and particularly adapted for use in dwellings of moderate cost. A sample order will be filled promptly.

HARDWARE SALESMAN.—An energetic young man desires a position of any kind. I have had three years' experience as bill and entry clerk and two years' experience as shipping clerk (salesman preferred). Address, CHAS. H. DOUGHERTY, 1603 North Eleventh Street, Philadelphia, Pa. 57

MANAGER—Position wanted as manager or clerk in Hardware and implement store located in the Pacific Coast States, or in Montana or Colorado. Would be willing to invest some capital in the business. Address, G. W. P., care HARDWARE, 275 Broadway, New York. 37

ORDER CLERK OR PACKER.—Young man wishes position in a wholesale establishment as order clerk or packer. Was fifteen years with one house, and can give best of reference as to honesty, industry and intelligence. A steady position of greatest importance. Address, ALEXANDRINE, care HARDWARE, 275 Broadway, New York. 27

SALESMAN.—Young man (23) of good address, thoroughly conversant with the builders' Hardware line, also capable of estimating, desires position as road or inside salesman. Six years with a large wholesale house, and one year's experience as salesman. Those appreciating a tactful and hustling man, address ENERGETIC, care HARDWARE, 275 Broadway, New York. 67

SALESMAN—Wanted position as salesman, assistant buyer and manager in wholesale or retail Hardware house, where good future is assured to right party. Address, HUSTLER, care HARDWARE, 275 Broadway, New York. 46

SALESMAN.—Situation in a retail Hardware store by a good salesman; young man, 23; strictly sober and industrious; with six years' experience in wholesale Hardware; in fact can make myself useful almost anywhere; small or large city. Can furnish best of references. Address, HARDWARE, No. 308 N. 13th Street, St. Joseph, Mo. 59

STOVE SALESMAN—A young man (21) wants a position with some good Hardware establishment. Has had three years' experience, and is a good stove salesman. Best of references. Address STOVE, care HARDWARE, 275 Broadway, New York. 31

TRAVELING SALESMAN—In Hardware and house furnishing goods. Experienced in Hardware and department store trade; 20 years on the road. Moderate salary. Address, P. H., care HARDWARE, 275 Broadway, New York. 68

Side Line Offered.

COMMISSION SALESMEN, now on the road, to sell the R. W. & B. cork puller. Address JOY MFG. CO., 371 Fulton Street, Brooklyn, N. Y. 80

ELECTRICAL SPECIALTIES.—Salesman wanted, to carry our electrical and Hardware specialties as side line. A good commission allowed. No samples required. Address THE G. L. VAN NAMEE MFG. CO., Gouverneur, N. Y. 11

FOX RAZORS.—Salesmen have an opportunity to secure our line of Fox razors as a side line. We have a few States open. State experience and give references. Address, FOX CUTLERY CO., Dubuque, Iowa. 55

HARDWARE SALESMEN.—To handle as a side line our labor-saving device, advertised elsewhere in this issue of HARDWARE. Liberal commission to good men. We furnish free to our agents a perfect working model, pocket size, which will lift 500 pounds. Address, DEPT. C. BURR MFG. CO., Cleveland, Ohio. a

PUMP SPECIALTIES.—Salesmen calling on the Hardware trade can do well in handling an attractive line of specialties in pumps and other articles. For particulars, address TORRENT PUMP CO., Cleveland, O. a

TRAVELING SALESMAN.—Wanted first-class traveling salesmen to sell as a side line the Cycloid all metal, full nickeled, air rifle. Sell at sight to Hardware and sporting goods trade. Address CYCLOID CYCLE CO., Grand Rapids, Mich. 65

TRAVELING SALESMEN WANTED to carry my electric search-light as side line. Good commission allowed. Night police, physicians and livery men are sure buyers. Address E. G. BRUCLER, Stryker, Ohio. 78

WIRE FENCE SPECIALTIES.—Salesman wanted, to carry as side line, our line of wire fence specialties. Small articles. Sell to Hardware trade. Libeal commission. Address W. H. MASON & CO., Leesburg, Ohio. 16

Wanted to Purchase.

WANTED TO PURCHASE an interest in a retail Hardware store, with moderate sized stock, in good condition and doing a good business. Location should be good, in a fast-growing town. Give reason for selling. Address, John R. Swartz, Hughesville, Pa. 42

Location Wanted

FOR A NEW HARDWARE STORE (iron and farm tools not objectionable) in the middle West or South. Prefer a manufacturing city of 25,000 or more that has bright prospects ahead. Any information from a jobber, manufacturer or salesman will be properly appreciated. Have a good stock and fixtures ready to move if right location is found. Would buy a store with a small stock if necessary, but prefer to use our own if equally advantageous. Address N. E. N., care HARDWARE, 275 Broadway, New York. 74

Agencies Wanted.

AS LONDON AGENTS.—Darney & Co., 56 Great Queen St., London, Eng., manufacturers' agents and importers. Seven years established. The introduction of novelties a specialty. 77

EXCLUSIVE BRITISH AGENCY—I am open to take up and push a good specialty. Full particulars to HALL, 42 Old Broad Street, London, Eng. 79

HARDWARE MANUFACTURERS desirous of being represented east of Ohio by hustling agents, already established, could find the proper parties by addressing HOLMAN SUPPLY CO., 158 Pearl Street, Buffalo, N. Y. 71

Agency Offered.

LIVE HARDWAREMEN.—We would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men now on earth"—a modern line THAT CAN BE SOLD to your customers. Address "BOX 88," care HARDWARE, 275 Broadway, New York. a

Minerals For Sale.

MINERALS.—A fine collection of minerals, secured by the late John G. Witte, and, costing the owner about $2000, can be obtained for $300 if application is made at once. Fine exhibition cases containing the collection may also be had if desired. Address, H. H., care HARDWARE, 275 Broadway, New York. a

Attention, Manufacturers!

FOR EXPORT TRADE.—We desire the exclusive control and sale of specialties for the European market. We have a branch house and complete organization at Hamburg, and are in touch with the most substantial European trade. Favorable arrangements will be made with manufacturers of unquestioned financial responsibility. Address, R. H. WOLFF & CO., LTD., 116th, 117th, 118th Street and Harlem River, New York. 56

ALL THE NEWS. HARDWARE HARDWARE EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hardware Exclusively."

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

Has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.

It has just completed its **twentieth** volume and is consequently in no experimental stage, waiting to establish a subscription list.

HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

. . . PUBLISHED BY . . .

THE HARDWARE PUBLISHING CO.,
275 Broadway, New York.

PRICE $1.00 PER YEAR FOR 24 ISSUES.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

"GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"THE MOST HELPFUL AID."

Pike Mfg. Co., Pike Station, N. H. [*Whetstones, Oil Stones, etc.*]: We like to keep our name and our wares before the public in a modest way. We have found HARDWARE the most helpful aid toward accomplishing that purpose.

"A PROFITABLE MEDIUM TO ADVERTISERS."

Gilbert & Bennett Mfg. Co., Chicago and New York. [*Wire Goods*]: You have reason to be proud of HARDWARE's success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

"COULD NOT KEEP HOUSE WITHOUT IT."

Sickels, Preston & Nutting Co., Davenport. Iowa. [*Wholesale Hardware*]: We would not know how to keep house without HARDWARE. The review of the Hardware markets, trade reports and editorials are frequently read before letters are opened that are received in the same mail with HARDWARE.

J. L. PRESCOTT & CO. NEW YORK, N.Y., U.S.A.
ENAMELINE

Can You Afford- to carry in stock unknown brands of stove polish that your customers know nothing about, brands they do not call for, the quality of which is inferior, gives them dissatisfaction, and the consequent sale of which brings discredit to your store? Your best judgment answers NO! Then sell ENAMELINE, the Modern Stove Polish. Paste, Cake or Liquid If you are doing business for a profit it will pay you to handle our whole line.

J. L. PRESCOTT & CO., NEW YORK.

U. M. C.

"Smokeless" Shells.

Nitro Powders.

"U. M. C. No. 3" Primers.

All sportsmen know that the hands and arms, in shooting, become accustomed to the recoil produced by any uniform charge—and that the slightest unexpected variation of load will make a perceptible difference in their marksmanship.

It is because of the absolute uniformity of charge in U. M. C. Factory Loaded Shells—and the close attention paid to every detail of construction that they are so deservedly popular—being used more than any other shells of the same grade in the market.

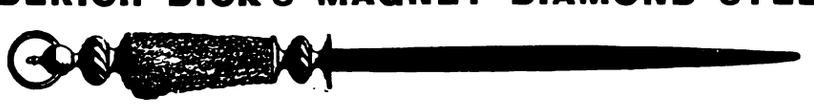
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.



and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.

These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

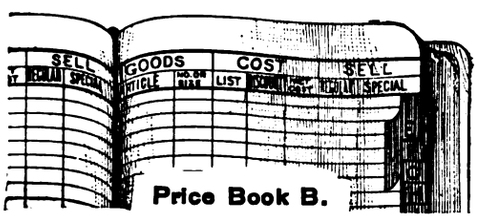
HARDWARE PRICE BOOKS.

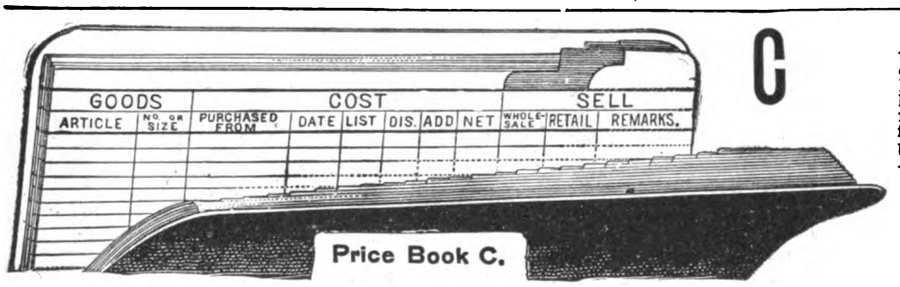
Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.



These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:



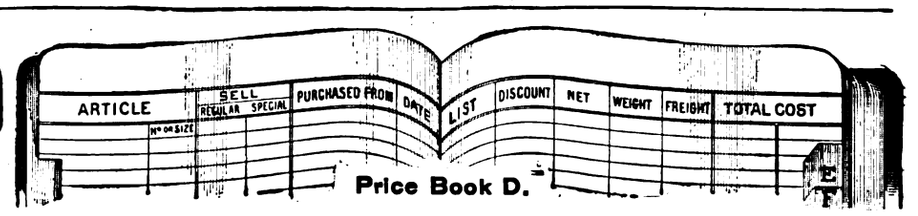
A, 200 pages, - - $1.00 **A 2**, 400 pages, - - $1.50
A F, 200 pages with flap, 1.25 **A F 2**, 400 pages with flap, 1.75

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

B, 200 pages, - - $1.00 **B 2**, 400 pages, - - $1.50
B F, 200 pages with flap, 1.25 **B F 2**, 430 pages with flap, 1.75

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¾ inches.***



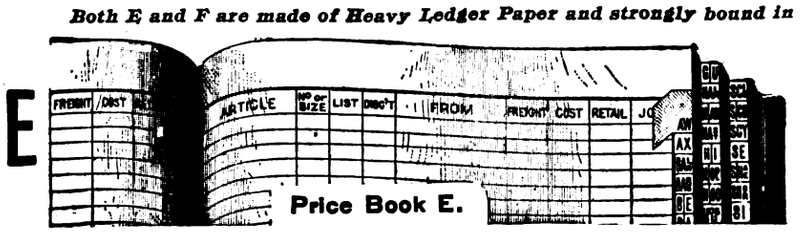
FOUR EDITIONS:

C, 200 pages, - - - $1.00
C F, 200 pages with flap, - 1.25
C 2, 400 pages, - - - 1.50
C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

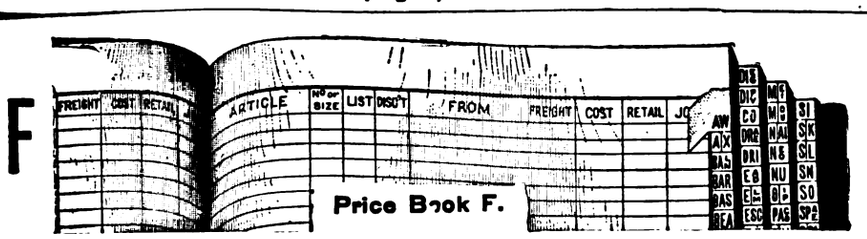
D, 200 pages, - - - $2.00
D F, 200 pages with flap, - 2.50
D 2, 400 pages, - - - 3.00
D F 2, 400 pages with flap, 3.50



MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU For Chisels, turn to CH$^{I}_{U}$ For Iron, turn to IRO
" Parers, Apple " PA$^{P}_{R}$ " Cutlery, " CUT " Irons, " IR'S



Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

HARDWARE

The annual meeting of the New England Iron and Hardware Association was held at the Point Shirley Club, Boston Harbor, on Tuesday, June 19th. The principal business of the meeting was the election of officers for the ensuing year, which resulted as follows: President, William Chamberlain, Portland, Me.; Vice-President, Allan J. Chase, Boston; Clerk, John T. Boyd, Boston; Treasurer, C. H. Breck, Boston; Directors: William Chamberlain, John T. Boyd, C. H. Breck, Allan J. Chase, John H. Robbins, E. P. Sanderson, Oscar A. Shepard, Peter E. Strauss, H. W. Waite. A banquet was served after the conclusion of the business meeting, entirely of an informal character, however, and the menu was thoroughly enjoyed by all present.

Among a number of other improvements, The Jackson Shear Co., Fremont, O., are installing a new power plant of 250 H. P. and a 200 H. P. Atlas Corliss engine. An electric lighting plant and blowers for collecting dust are also being added to their present facilities for increasing their product.

The Riflemen's Record and Score Book issued jointly by The King Powder Co. and The Peters Cartridge Co., as well as their little booklet, "Hints on King's Semi-Smokeless Powders and Peters' Cartridges," have proved so exceedingly popular to the shooting fraternity that they have been forced to issue several editions. These books are sent free to any pistol or rifle man desiring them. Address the King Powder Co., Cincinnati, O.

S. R. Slaymaker has purchased from the Slaymaker-Barry Co., of Connellsville, Pa., of which company he has been, for the last twelve years, President and General Manager, all their stock of locks, Hardware, etc., patents, patterns, etc., of their Lock and Hardware Departments, also their large factory at Lancaster, Pa., in which he has placed the most modern equipment for manufacture of the class of goods above referred to. It is his intention to manufacture at Lancaster the full line of S. B. Co. specialties in padlocks, door locks and Hardware, adding new goods from time to time as requirements of trade will justify. John H. Graham & Co., 113 Chambers Street, New York, N. Y., are general sales agents for this line of goods.

Simmons Hardware Co., St. Louis, have recently increased their capital stock from $3,000,000 to $4,500,000 by the issuance of $1,500,000 second preferred paid-up stock, bearing 8 per cent. dividend, and non-cumulative. This second preferred stock was allotted to each holder of the common stock, on the basis of one share of second preferred for one share of common stock, thus coming to them as a stock dividend.

H. A. Gordon, corner Third Avenue and Sixth Street, New York, has recently opened a new store at 219 State Street, Perth Amboy, N. J. As his intention is to carry a complete stock of Hardware in both places, he desires to receive catalogues of Hardware and housekeeping specialties from manufacturers, in view of stock requirements of the future.

Late orders received by the J. D. Warren Mfg. Co., of Chicago, for Warren Cabinet Shelving were from C. B. Scott, Scranton, Pa.; Johnson, Peterson & Co., Hector, Minn.; Agard Hardware Co., Torrington, Conn., and J. H. Schmidt, Elkport, Ia., the latter placing his second order for an extension to his present outfit purchased last year.

George Wright, 121 Fulton Street, New York, is engaged in the preparation of a large volume which will be published under the name of "America's Greatest Manufacturers." As it will include the metal and engineering trades, it will be similar in character to the one published by him in Great Britain four years ago under a similar name, applying only to Great Britain. The cost of the book, it is intended, will be defrayed by the advertisements in it, which form its most interesting contents, and when published will be distributed free all over the commercial world. The book being intended for the markets both at home and abroad, will be filled with illustrations of the principal manufacturing plants and of their products covering the United States, as well as other features of permanent interest. The same publisher isssued the "Wright's Trade Directory and Gazetteer of the World," which has been found an extremely useful publication to aid in distributing commercial information in the interest of our export trade.

The Glidden Varnish Co., of Cleveland, are building a fifty-thousand-dollar addition to their works, which, with their present capacity, will enable them to turn out as much varnish as the largest varnish plant in the world. This company has come to the front very fast during the past few years, and their famous specialties—Surfacene, M. P. Special Coach, and Jap-a-lac—have a world-wide reputation. The new addition will be utilized principally for making Jap-a-lac, the new wood finish—one of the most elastic and durable varnishes ever offered to the trade.

Frank H. Boyle, 420 West Twenty-seventh Street, New York, is engaged in manufacturing ornamental iron, bronze and brass work for buildings, grilles, railings, marquees, metal and glass doors and screens, elevator doors and enclosures, stairs, fire-escapes, folding gates, andirons, special Hardware, etc. He is about placing on the market some special wrought metal escutcheons, hinge plates, etc. Having been identified with this class of work for a number of years would make his experience desirable for consultation.

The Bavarian Government has just set aside the city ordinance preventing the use of automobiles on the streets of Munich. This opens up one of the best German cities for American manufacturers of horseless vehicles of every sort, and wide-awake agents should be promptly sent to this field, so promising because of the large class of wealthy residents, Munich being the third largest city in the German Empire. The streets are well paved, bicycles are popular, and horses dear. This opening should not long be neglected by American enterprise.

The Kinnear Mfg. Co., of Columbus, O., have lately moved into their new building on the corner of Fourth and Lincoln Streets, and now have one of the most perfectly appointed shops in the state. The building is one story in height, 200 x 110 feet, is well lighted by numerous skylights, and the arrangement of the machinery speaks highly of the skill of W. L. Kinnear, the manager. The firm is now manufacturing fireproof sliding blinds and doors; machinery is in the process of construction for the manufacture of fire and water proof metal shelving, which will be especially adapted to Hardware stores.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

Editorial Trade Review.

The reports from the jobbers in various sections of the country would indicate that with scarcely an exception sales this year for the first six months have been greatly in excess of the same period a year ago. While this is undoubtedly caused to a great extent by the higher prices for goods prevailing since January first, upon investigation it is found the tonnage shows up equally well, proving a wider and more extended distribution of the manufacturers' products, and resulting in a satisfactory and profitable season for comparison.

The past two months in several sections have been noted for exceptional drouths, which have had a bad effect upon crops which from earlier indications created prosperous anticipations. In some sections only half crops will be harvested, and while the knowledge of this fact has strengthened prices of such products, the excessive crops in other parts of the country may cause at harvest-time sufficiently low prices to prevail as to seriously interfere with prosperous conditions in the sections that are suffering from the untoward conditions complained of.

Under such a state of affairs as affecting the trade for Fall goods, purchases in the disturbed sections may be more conservative than would otherwise be the case, as but little satisfaction would be experienced by the jobber in filling up the retail stocks of his territory with an overstock of goods, which would be followed by a necessity for carrying his customers through a season of dullness superinduced by limited crops, and a desire to hold even them for a price higher than the market promised for immediate sales.

The changes in prices already announced by the manufacturers to govern the transactions for Fall trade are all of a character reflecting the lower prices indicated and suggested by declining quotations on raw materials. The manufacturers, whose quotations have been so greatly advanced beyond the prices prevailing in 1898, are making comparisons of cost, which will be followed by a suitable concession, or business will be found anything but brisk in character. This is no time to "put up a bluff" in regard to trade conditions, and that this is a recognized fact no better confirmation can be given than the prevailing promptness with which the old terms are being restored of "60 days or 2 per cent. discount for cash in 10 days." This is becoming so general it is doubtful if any leading manufacturer will be found among the malcontents when the season is fairly opened.

At this season of the year it is customary for the productive interests of the country to cry a halt in manufacturing, shut down a week or two to make needed repairs, and go over their stocks and arrange plans for the coming season. This is largely being done by the Hardware manufacturers at present, and discount sheets will be gone over, all advanced prices scrutinized, and where necessary to effect sales reduced to harmonize with existing quotations on the metal base of which the goods may be composed or constructed. Those articles of heavy Hardware where labor is slight in proportion to cost of material will first be levelled, as they were the earliest to advance, and changes in prices will be successively announced to secure early orders. As the general impression prevails that conditions favor a good average business for the remainder of the year, every preparation should be made to make it a successful and profitable one.

The Presidential election, as far as preliminaries are heard from, seems to exert less of an influence than has usually been the case; perhaps the belief prevailing that the desire for a change at Washington is by no means of a pronounced character has a great deal to do with the peaceful nature of the campaign programme. The conditions usually surrounding the political unrest of an aggressive canvass every four years may this year lose some of its strength, when the sustaining of a prosperous trade, established for the first time in several years, demands the best attention possible to bestow upon it.

Conservative purchasing relegates all fear of a setback to the rear of the procession. No speculation in buying this Fall, no Spring crop of failures need be apprehended. When a slump in high prices keeps the flag of trade at half-mast, and hesitating buyers are in the majority, a cash reserve is more to be desired than a full warehouse.

The Welcome Vacation.

Among the powerful and controlling incentives to the conscientious performance of one's daily duty is the willing concession by the humane employer of a short period of rest from the exacting labor demanded by a zealous devotion to one's steady employment. This compensates in a degree for many an evening spent in arduous disentanglement of complications arising in business, which invariably occur during the continuance of a prosperous season such as we have just passed through.

In such a period of constant employment there is no room for hesitating workers; the active co-operation in daily duties, the never-failing reliance of the conscientious clerk upon those with whom he is associated in the satisfactory preformance of his daily routine does not usually count the hours alone of customary application, but frequently away into the hours of the restful night is application necessary, and cheerfully accomplished, when there is a prospect ahead of a vacation period of rest, to be conceded when the heavy labors of the season shall have passed, and the stretched bow of muscular or mental endurance shall have a chance to resume the normal conditions which well-won rest ensures.

The world is experiencing a state of growth in all things, and the days when the inhumanity of the employer was an acknowledged influence on the conditions of labor have passed away with the sentiment which justi-

Digitized by Google

fied the use of a cart-rung to expedite the movements of an overworked horse. When the fruits of civilization are especially noticeable in the human relations between men and animals compelled to work for their daily sustenance, we may well look forward to a millennium of peaceful rest, to which every laboring heart instinctively turns, hopeful of its serene influence, its heavenly promise of perfect peace, which "make us rather bear the ills we have" with content and comfort under the inspiration afforded by an occasional vacation.

A Statement Worth Studying.

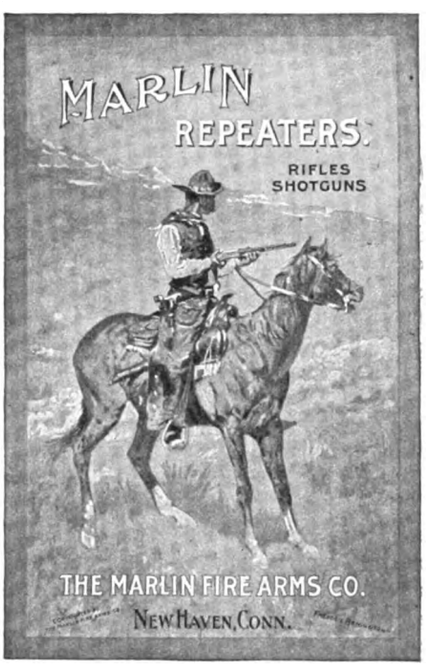
Forty million dollars' worth of manufactures were exported from the United States in the month of May, 1900, and twenty-five million dollars' worth of manufacturers' materials were imported into the United States. This is a higher record, both in exportation of manufactures and importation of manufacturers' materials than was ever made in any preceding month in the history of our foreign commerce and manufactures. This assures a total exportation of manufactures in the fiscal year 1900 of fully 425 million dollars and an importation of manufacturers' materials of 300 million dollars, which will make the record in both exports of manufactures and imports of manufacturers' materials much higher than that of any preceding year. On only four occasions has the importation of manufacturers' materials reached the $200,000,000 line, while in the year just ended it will be, as already indicated, about 300 million dollars—an increase of 50 per cent. over the average of the past five years. Exports of manufactures in 1899 were 338 million dollars, and will be fully $425,000,000 in 1890—an increase of nearly or quite $90,000,000; while no earlier year ever showed an increase of as much as $50,000,000.

The total importation of manufactures for the year will aggregate about $325,000,000, and, as already indicated, the total exports of manufactures will aggregate about $425,000,000. Prior to 1893 imports of manufactures always exceeded exports of manufactures. In 1888 imports of manufactures were 2 1-2 times the amount of exports of manufactures; in 1893 they were still more than double the amount of the exports; in 1896 they were nearly 50 per cent. greater than the exports, and in 1898, for the first time, the exports of manufactures were greater than the imports of manufactures, the figures for that year being, respectively: imports of manufactures, $226,000,000; exports of manufactures, $290,000,000. Since that time exports of manufactures have steadily increased, and, as above indicated, will exceed the imports of manufactures by about $100,000,000.

The following table shows the imports of manufacturers' materials and exports of manufactures in May of each year from 1894 to 1900:

Month of May	Manufacturers' Materials Imported.	Manuf'tured Articles Exported.
1894	$12,378,337	$15,199,402
1895	17,390,305	18,144,676
1896	13,144,661	22,016,999
1897	23,255,610	26,461,546
1898	16,707,399	27,031,709
1899	22,056,703	30,316,314
1900	25,405,915	40,460,367

Three Great Victories Won with L. & R. Shotgun Smokeless by J. S. Fanning.



New York State Shoot, Utica, N. Y., June 5-8, 1900.—Mr. Fanning was high gun with an average of 98 per cent.; also broke the world's record with a run of 231 straight in open competition for money.

Pennsylvania State Shoot, Chambersburg, Pa., May 15-18, 1900.—Mr. Fanning was high gun with an average of 95 per cent. Championship of the State was won by H. S. Smith, of Osterburg, Pa.

West Virginia State Shoot, Charleston, W. Va., June 19-21, 1900.—Mr. Fanning was high gun with an average of 96 per cent., making a run of 122 straight. Championship of the State was won by Harvey Allen, of Sistersville, W. Va.

An Artistic Cover.

The Marlin Fire Arms Co., New Haven, Conn., have just issued their new catalogue of Marlin rifles, repeaters and shotguns. It covers the entire line of repeating carbines, muskets and shot-guns, with all the appliances necessary for the gun trade to be familiar with. The catalogue is arranged in three sections. Part I. is designed for a quick reference of dealers and consumers, who desire the details of all the arms made by the company. Part II. is intended for a consumer who wishes more complete information in regard to the arms and the necessary ammunition used in them. By a careful reading of this portion of the catalogue a novice is enabled to form a correct decision as to which arms will best suit his individual wants and desires. Part III. gives a number of hints and items of information that should interest and possibly help shooters in general. The catalogue and price list consists of a pamphlet of 120 pages, illustrated throughout, possessing 300 illustrations. It is provided with a cover in

six colors, showing a superb sketch by Frederic Remington. We give herewith an illustration of this cover, which will convey a pretty good idea of the artistic excellence shown in the construction of it. It illustrates a typical cow-puncher mounted on his valuable horse, and armed, of course, with his trusty Marlin rifle. In its artistic execution it shows Mr. Remington at his best, and will be appreciated by all those who are acquainted with life on the Western plains. The Marlin Co. state they will be only too glad to mail a copy of this catalogue to any reader of *Hardware* who will send three cents in stamps to pay postage.

America Beats the French.

The International Revolver Match shows a total of 4,828 to the credit of the French team, and 4,889 for the American team.

The great revolver match, which has attracted such universal attention on both sides of the Atlantic, was shot off June 18th and 19th, the American team doing its work at Armbruster Schuetzen Park, Greenville, N. J., while the French shot at Gastinne Rennette Gallery, Paris, the results being reported both ways by cable.

Some very remarkable shooting was done by both teams, and a number of the scores by the Americans were simply phenomenal. J. A. Dietz, Jr., made the great score of 263 on the French target, which excelled all other contestants. B. F. Wilder headed the list on the American target with a score of 263. Both these gentlemen used King's semi-smokeless powder in making their remarkable runs, and are now receiving the congratulations of their many friends.

The best scores of the Frenchmen on the French target were 247, and 253 on the American target.

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—For some time past my business affairs have been in a bad condition. My liabilities amount to many thousand dollars and my assets are only accounts amounting to a sum sufficient to allow me to pay my creditors about 25 cents on the dollar. I have endeavored to effect a compromise with my creditors, but two of my largest creditors have refused to accept my offer and have sued to recover the full amount of their claims. I am afraid they will have a receiver appointed of my business and collect their claims in full, which would make my other creditors get nothing. Could they do this; and, second, what would you advise me to do?

REPLY.—If your creditors were successful in obtaining a judgment against you they could, in all probability, have a receiver appointed of your business and satisfy their claims in full, if you had property sufficient to pay their judgment. Since these suits have been begun against you, to which you have no defence and which will render you totally insolvent, we would advise your filing your petition and schedules in bankruptcy at once. As soon as this is done, you should apply to the Bankruptcy Court for an order staying all proceedings on the part of your creditors. By this means your largest creditors will be prevented from obtaining a judgment against you, and your creditors will all share equally in your property.

QUESTION.—I am a director of a corporation organized under the laws of the State of New York and should like to be informed whether a majority of the directors can dissolve a corporation.

REPLY.—A corporation may be dissolved by a majority of the directors when in the opinion of the directors it is no longer to the interests of the shareholders and those interested in the corporation that the corporation should continue doing business. In New York State we have a proceeding for the voluntary dissolution of a corporation, in which proceeding the matter is referred to a referee before whom the facts stated in the petition are proved. Notices must be published and creditors given notice of the dissolution. The proceeding is quite a lengthy one, generally taking several months to be finally settled.

QUESTION.—What is the cost of going into bankruptcy, and how long will it take to obtain a discharge?

REPLY.—1. The cost of a proceeding in bankruptcy varies and depends largely upon the number of creditors the bankrupt has. The fee for filing the petition and schedules is $25. After filing the petition and schedules the case is referred to a referee in bankruptcy, who prepares and sends out notices to all creditors. Some referees charge 10 cents for each notice so sent to each creditor. There are many small incidental expenses as well as the fee for the services of a lawyer in taking the bankrupt through the proceeding, which, of course, depends upon the lawyer to whom the bankrupt goes. 2. The length of time it will take to obtain a bankrupt's discharge depends entirely upon the creditors of the bankrupt and the condition of his estate. The bankruptcy act provides that at any time after one month from the time of filing his petition and schedules the bankrupt may apply for his discharge, but this will not be granted if any creditor objects upon good grounds. If the creditor objects, the specifications of his objections are sent before the referee, and considerable time is consumed in further hearings before the referee and before a decision is finally reached.

QUESTION.—A man has a will drawn up by a lawyer and had it left at his house to read. He finds it is all right and signs it. He is told he should have had witnesses when he signed it. He therefore has two friends call, and he tells them that he signed his will, and that the document so signed is his last will and testament. He then requests his friends to sign as witnesses, which they do. Is not that will in all respects legal?

REPLY.—As far as the execution of the will is concerned it is legal, since it is not necessary for the testator to *sign* his will in the presence of his witnesses, if he so acknowledges his signature, and that the instrument so signed by him is his last will and testament. It is, however, much safer and wiser in executing a will for the testator to come together with his witnesses, and in the presence of each and all of them sign his name, acknowledge the execution of his will, and request each of them to sign as witnesses. The witnesses *must* sign in the presence of the testator and it is better that they sign in the presence of each other. If these details are observed, the proving of the will is greatly facilitated.

QUESTION.—I ordered some goods from a prominent dealer in New York, and in due time received invoice of goods, as supposed to be shipped, but no bill of lading accompanied the invoice. Later I received one case containg about half the goods. The conditions of the bill were to pay on receipt of merchandise. I thought perhaps the other case would be along in a day or two, as a case at times gets separated from the rest and comes in all right. I paid the bill, telling the house of the circumstance—that only part of the goods were in, but supposed the others would be in later—and told them to send me a bill of lading. Two days later I got another case, but still over a gross of the article ordered and paid for were missing. I wrote again, specifying what goods had been received, and asked that the error be looked up. I got no answer, and I wrote a third time, but have received no reply. What would you advise?

REPLY.—You have a right either to demand the return of the money paid for the goods not delivered, or to insist uvon the balance of the goods being sent. We would advise your placing this matter in the hands of a lawyer. It is extremely probable that a letter from your lawyer stating that your claim had been placed in his hands for adjustment would have the desired result.

Michigan Hardware Association.

The fifth annual convention of the Michigan Hardware Association will be held at the Hotel Cadillac, Detroit, on Wednesday and Thursday, July 11th and 12th. The usual routine business will occupy the morning session on the 11th, the feature of which will probably be an address of welcome by the Mayor of the city. In the afternoon the reports of committees and the presentation of the Secretary-Treasurer's report, will inaugurate the proceedings. I. A. Sibley, of South Bend, Ind., a member of the executive committee of the Interstate Retail Hardware Dealers' Asssociation, it is proposed, will read a paper on the subject of affiliation with this Association. It is anticipated that the reading of this paper will be followed by a discussion in which all those present are invited to participate. During the several sessions of the Association a number of papers on different subjects will be read by the delegates, and a question box will also be one of the features. It is anticipated a very large number will be present, as a greater interest than usual is being taken throughout the State. It is believed that a thoroughly interesting convention will be had, in which the business will be thoroughly canvassed from all the different points of view. The entertainment feature in connection with the convention will eventuate on Wednesday evening by the invitation of the manufacturers and jobbers of Detroit, who will tender the delegates a moonlight excursion, which will be a very appropriate idea, especially for this season of the year.

"You don't need any medicine; go home and put your heavy clothes on again."

"I can't do it, doctor; my wife's packed them all away in moth balls."—*Indianapolis Journal.*

PARAGRAPHS FROM THE INDUSTRIAL FIELD.

Exports of petroleum from this port to China from Jan. 1 to date show a very considerable increase over those for the corresponding period of last year.

The figures are: From Jan. 1, 1900, 24,841,680 gals.; same period last year, 20,417,330 gals; increase, 4,370,350 gals.

During the first three months of this year 37,000 gallons of linseed oil were exported from this country. Of this total Japan took over 15,000 gallons, Mexico being the next largest customer on a purchase of 5,500 gallons.

The india-rubber trade is of great importance to the United States, and has shown a rapid increase during the last few years. For the fiscal year ended June 30, 1890, the total importations of crude rubber amounted to 33,842,374 pounds, valued at $14,854,512, while that of manufactured rubber was valued at $367,647. In the fiscal year 1898 the imports of crude rubber and gutta percha amounted to 46,055,497 pounds, valued at $25,386,010, while that of manufactured articles and waste or scrap rubber was 9,488,327 pounds, worth $805,951. This shows not only a decided increase in the quantity imported, but also a rapid rise in price. In 1890 about two-thirds of the entire amount imported came from Brazil. In 1898 about three-fifths came from that country.

In the face of a tariff on lumber the imports into the United States last year were heavy. These indicate the enormous demand for lumber in this country. The imports for 1899 of lumber amounted to $7,005,101. The importations from Canada were 673,622,000 feet, valued at $6,990,175, against 348,876,000 feet, valued at $3,464,718 in 1898, and 674,851,000 feet, valued at $6,759,376, in 1897. It will thus be seen that the importations of lumber by the United States last year were almost as great in feet and considerably greater in value than in 1897, during more than half of which year lumber was on the free list, and there were heavy importations in anticipation of the imposition of the duty. The shingles imported by the United States last year were 545,484,000, valued at $999,862, against a valuation of $830,298 in 1898 and $414,222 in 1897.

There are nearly 500 water power electrical plants in the United States, representing an investment of over $60,000,000. The total horse power represented by water wheels is over 200,000. The power is furnished for lighting 28,000 arc lights, 845,000 incandescent lights, and for operating about 60,000 horse power of motors. There are over 610 miles of electric street railways operated by water power electrically transmitted.

The rapid growth of our business with Japan in rails and machinery during the past four years is an indication of what may be accomplished in that quarter in the future under proper encouragement. Four years ago American rails were unknown in Japan, but at the present they more than double in quantity the rails which come from England, which up to 1896 constituted the chief source of supply. It is believed that Americans have it in their power to practically control the supply of rails and railroad material generally with Japan during the next decade. As an indication, it is cited that the Carnegie Company signed a contract at Kobe for 8,000 tons of rails at a price of $3.28 per ton under the lowest English bid.

The steamship *Wilhelmina* recently cleared at Philadelphia for Japan carrying a cargo valued at more than $1,000,000. A part of it consisted of thirty-one locomotives, valued at $430,000, and about 4,000 tons of structural steel to be used in the erection of a palace at Tokio for Crown Prince Yoshihito of Japan.

An American firm has, it is reported, been awarded the contract to build the St. Lawrence River Bridge, at Quebec, at a price aggregating some $4,500,000. Twenty-seven thousand tons of steel will be needed for the undertaking. The structure is to be 150 feet above the river and 76 feet wide, with three spans, two of 600 feet each and one of 1,800 feet. There will be four railroad tracks, a driveway and walks on each side. It will take some three years to turn out the work, complete the structural material and erect the bridge.

The production of iron and steel wire rods in the United States in 1899 amounted to 1,099,376 gross tons, against 1,071,683 tons in 1898 and 970,736 tons in 1897, showing an increase of only 27,693 tons, or a little over 2.5 per cent. in 1899 over 1898. As compared with 1897, the increase in 1899 amounted to 128,640 tons, or over 13 per cent. The production of 1899 was the largest in our history.

We will import considerable quantities of the finer grades of iron and steel wire rods, particularly steel wire rods, our total imports of rods amounting to 17,964 gross tons in the calendar year 1899 and to 15,985 tons in 1898. Our exports of steel wire rods amounted to 16,992 tons in 1899 and to 18,510 tons in 1898.

A number of steel wagons of ten-ton carrying capacity and traction engines to draw them are soon to be shipped to China, where they are to form the equipment for a freight line across the desert in the northern part of China, and will enter active competition for the carrying trade, which is now being done wholly by camel caravans. The American projector of the line says the camels can carry only about 600 pounds and make only twenty miles a day, while his wagons will carry ten tons each and can easily make sixty miles.

Accordingto Prof. Borchers, says the *Engineer,* the world's manufacture of calcium carbide is utilizing a power equal to 180,000 horse power; that of alkalies and combinations of chlorine, 56,000 horse power; aluminum, 27,000 horse power; copper, 11,000 horse power; carborundum, 2,600 horse power.

For the ten months of the fiscal year ending with April the total exports of coal were 5,804,730 tons, showing the substantial gain of 1,734,245 tons, or 42.6 per cent. over the previous year. This increase, however, was all in sales to our two near neighbors, the shipments to Canada showing a gain of 1,535,146 tons and those to Mexico one of 147,645 tons.

The town of Ensley, Ala., is growing rapidly. Eighteen months ago there were 500 people there. Now there are 5000. They were brought there by the steel mill, the rod mill and other industries. It is a hot-bed of Southern enterprise and each week something new in this line turns up. It is announced that one of the largest plow factories in the United States will be located at Ensley.

THE PAN AMERICAN EXPOSITION, 1901.

THE TEMPLE OF MUSIC.

The Temple of Music, designed by Esenwein & Johnson, of Buffalo, for the Pan-American Exposition, will cover a plot of ground 150 feet square and will be located on the northwest corner of the Esplanade and the Court of Fountains. The exterior of this handsome building will be treated architecturally after the style of the Spanish Renaissance. It will be octagonal in shape, with octagonal pavilions at each corner. The main entrance will be through the pavilion on the corner of the Esplanade and Court of Fountains. Each of the facades of the main building will have a richly ornamented colonnade. Between the columns will be large window openings and ornamental panels, each bearing a portrait bust of some famous musical composer. The cornice, frieze and balustrade of the main building are designed in a florid adaptation of the Spanish Renaissance, and the balustrade will carry tablets bearing the names of noted musicians and composers and at intervals will have posts surmounted by flagstaffs. On the corners above the pavilions will be groups of statuary representing music, dancing, etc.

TEMPLE OF MUSIC, PAN-AMERICAN EXPOSITION.

The chief features of the drum of the dome will be star shaped windows resembling those seen in the ancient Spanish mission buildings. These windows will light the interior of the auditorium. The dome and the roofs of the pavilions will be richly gilded. Gold and brilliant coloring will be freely used in all the exterior decoration. The crown of the dome will be 136 feet above the grade of the Court of the Fountains, and the Temple and its pavilions will form a very attractive part of the landscape scheme of the entire group of Exposition buildings.

The auditorium, which will seat 1200 persons, will be a few steps up from the grade of the building, and in addition the restaurants and balconies will give further seating accommodation for 1600 people. The other pavilions in addition to the one used for the main entrance will be occupied by the stage and for a fully equipped restaurant with the necessary kitchen adjuncts, serving rooms, etc. The auditorium is only a few steps below the floor grade of the restaurant, and the partition between the restaurant and the auditorium will be glazed, so that people seated at the tables can overlook the audience and enjoy the concert or entertainment at the same time. The flat domed roof of the auditorium will be supported by eight massive piers. Between the piers will be large arches opening into the galleries, to the main entrance, and leading to the stage. Over each of the eight large arches will be a cartouch bearing an inscription indicating one of the grand divisions of music—Oratorio, Grand Opera, Symphonic Music, Lyric Music, etc. The lighting will be through the star-shaped windows previously mentioned, passing through eight ceiling lights each having 320 square feet of glass. The front of the galleries will be decorated with a frieze of singing cherubs. An elaborate and complete system of heating and ventilating will be adopted for this building. Numerous and commodious entrances and exits will be provided, so that absolute safety to visitors will be assured. The interior as well as the exterior of the Temple of Music will be treated with a view to securing the best architectural effects.

In the Temple of Music will be erected one of the largest and finest organs in the United States. It will be an exceedingly beautiful and complete instrument, with all the latest improvements in organ building. It will have four manuals and about fifty speaking stops and will be voiced on three different wind pressures. The action will be the most complete style of tubular pneumatic. The mechanical contrivances and combinations will be most complete and in-

Digitized by Google

clude many varieties not hitherto used. Of the four manuals the great organ will have 14 stops, two 16-foot stops, six 8-foot stops, three 4-foot stops, one 2-foot stop, a twelfth and a four-rank mixture.

The swell organ will have fourteen stops, one 16-foot stop, nine 8-foot stops, three 4-foot stops and a three-rank mixture.

The choir organ will have eleven stops, one 16-foot stop, seven 8-foot stops, two 4-foor stops, and one 2-foot stop.

The solo organ will have three 8-foot stops and one 4-foot stop.

The pedal organ will have ten stops, one 32-foot stop, five 16-foot stops, one 10-foot stop and three 8-foot stops.

There will be a number of couplers, pedal movements and adjustable combinations of the most modern type. The case will be of Gothic design, to harmonize with the architecture and decorations of St. Louis Church, Buffalo, for which the organ is intended after it has served its purpose at the Exposition. An interesting fact in connection with this instrument is that it will be built in the city of Buffalo. The contract has been awarded to Emmons Howard & Son, the well-known organ building firm now of Westfield, Mass., but who have arranged to begin work in their new factory at Buffalo, and hence the organ which will be seen at the Exposition will be the first large organ manufactured in the city of Buffalo.

THE PROPYLAEA.

The Propylaea at the Pan-American Exposition at Buffalo in 1901 will mark the northern boundary of the Plaza and the extreme northern limit of the Grand Court. This elaborate and beautiful architectural ornament will serve the purpose of a colossal screen, shutting out from the Exposition the noisy and smoky reminders of the toil and care of our every-day life. The Propylaea is a magnificent creation, treated with fine artistic skill. The combined work is 500 feet long, consisting of two massive arched entrances or gateways at the extreme eastern and western ends of a long, gracefully-curved colonnade. These gateways are 36 feet wide and 54 feet high. Two open towers surmount the sides of each arch, and above the 20 tall Ionic columns that form the colonnade is a pergola or arbor, over which growing vines will wind their delicate tracery of green. Behind the colonnade will be the railway station, reached by a broad promenade. In the spaces between the great columns statues will be placed, showing their outlines distinctly against a background of color.

The electric street railway cars, as well as the steam roads, will unload many of their passengers at the station opposite the Propylaea, which is reached from the tracks by a spacious subway. The visitor will thus enter the grounds through the high arches on either hand of the Propylaea and obtain at once one of the grand views of the great group of Exposition buildings. On the right and left of the Propylaea are the Midway and the Stadium, in front the Electric Tower and sunken gardens and Court of the Fountains; the Electricity building and the Agricultural Hall are on either side; farther along the Machinery and Transportation building and that of Manufactures and Liberal Arts; and in the distance the Temple of Music and the Ethnology building. The visitor thus plunges at once into the midst of the Exposition.

THE PROPYLAEA, PAN-AMERICAN EXPOSITION.

"Diamond Cut Diamond."

A card-sharper who had evidently been doing the races, joined a small group of farm servants in a public house. Failing to interest the company in the mysteries of the three-card trick, he, in apparent sheer desperation, exclaimed: "Well, look here, chaps; I'll bet any of you five shillings I can cut the ace of spades, any of you to shuffle and arrange a pack of cards as you like," at the same time producing the pack, which he pushed towards a likely victim, who agreed to accept the wager, took up the pack, shuffled them, and then placed them on the table.

The sharper then took his knife and cut his pack clean through, at the same time saying: "There! I've cut the ace."

"Nay, that you haven't," quietly replied the yokel. "The ace o' spades is up my sleeve—see?"

The New Store of Walbridge & Co.

Walbridge & Co., dealers in Hardware, opened their new store at 392 and 394 Main Street, Buffalo, N. Y., last month. For twenty-one years the Walbridge store at Washington and South Division Streets was the mecca for everyone who wanted anything superior in the Hardware line, and now the firm, with a store in every way better than the old one and with an unsurpassed stock, will do business in the heart of the retail district.

The flourishing business of the firm was established in 1869 by Charles E. Walbridge, who conducted it until 1885, when his brother, Harry Walbridge, was admitted to the firm, the title of which has since been known as Walbridge & Co. The business was originally located at 272 Main Street, but, owing to a steadily increasing trade, it was removed in 1873 to the property formerly occupied by Plimpton, Cowan & Co., on Washington Street. Again, in 1879, the pressure of increased patronage demanded additional facilities and the store was removed to the premises on the northeast corner of Washington and South Division Streets. On January 18, 1891, the firm suffered a disastrous loss by fire, but immediately rebuilt what, until the new building now occupied, was considered the finest structure devoted exclusively to the Hardware trade in that city. About a year ago it became apparent that the business of the firm would be better subserved by the acquisition of more roomy and centrally located quarters, and arrangements were made for the complete remodelling of the property adjoining that of the Adam, Meldrum & Anderson Co. on the south.

The new building occupies a frontage of fifty feet in Main Street, running through 233 feet to Pearl Street, and constitutes one of the finest and most complete business blocks in the city, both as to location and appointments. The Main Street end of the building is six stories high, while the Pearl Street end is seven stories. The main entrance on Main Street is accessible by broad doorways, on each side of which are large and well-lighted windows for the display of goods.

So far as the new store itself is concerned the builder's art has been exhausted in furnishing the building for a perfect stock. The store is as near fireproof as may be. It is probably the best lighted store in Buffalo. Every means has been taken to provide sunlight in every department, and the artificial lighting system is extensive. The fittings are massive and the decorations are what one would expect the Walbridges to provide after their long experience.

The arrangement of the stock is faultless. One may go through the store from top to bottom and then outline in the mind, following a logical sequence, just where every article is to be found. That means that everything that is found in any Hardware stock is included in the invoice, and everything else that could be considered as a part of a Hardware store's equipment is also there. Yet the arrangement is such that every department has a place by itself and buyers will be saved the confusion that often attends an effort to find several different things in one great store.

The new store is the old one improved in every respect. Every department is enlarged and every branch of the stock has been amplified till it seems that nothing has been overlooked from the largest article to the smallest. Perfect facilities are furnished for sales in large and small quantities, and there will be no difficulty for the purchaser to suit any taste or fill any want. The stock of the new store will be found to include several new departures. There is a reason for this. Buffalo is growing. Several stores recently closed left gaps in the source of supply that were not entirely filled perhaps by those remaining. The Walbridge store will supply those lacks.

Entering the store the entire lower floor is in plain view. The ceiling is high, the store is wide and, though there is no end of room for customers and salesmen, the stock displayed seems endless. To the left is the sporting goods department. It is complete except that it has an annex elsewhere. Everything in guns, fishing tackle and sporting goods is shown. First-class lines are carried. To the right is the silverware department. The display is dazzling, the stock is large and the quality of goods of the first class. Everything in the line of edged tools is on this floor and in the centre of the store is a stock of optical goods, purses and other novelties that are sold to advantage in Hardware stores and yet are not carried by many such concerns. Paints are found in the rear and a part of the rear is also occupied by the shipping-room, where goods are wrapped and sorted for delivery, through the entrance on Pearl Street.

On the second floor is a display of china, glass, lamps, bric-a-brac and fancy articles that will agreeably surprise many persons. One small room has been lined with mirrors, and there is the display of cut glass. It is a fairy apartment. The finest lines of china are shown, and with them dinner sets and open-stock goods that are designed to meet every requirement of the buyer. It is a wonderful room.

The third floor is devoted to stoves, refrigerators, gas fixtures, mantels, grates and tiling. The stock is as complete as that in any other department. A sample bathroom is shown, and near-by are several rooms fitted with the finest mantels, grates and chandeliers and hanging lamps and fixtures of every description.

There are two decided novelties in the store. Near the big bicycle salesroom is a room that will be devoted to the trial of athletic goods. There, any one buying a golf outfit may have an opportunity to swing the clubs to see that they have the right "hang," and other apparatus may be tested. It is a department that will be welcomed by those who desire to know what they are buying before the goods are accepted. Then, too, there is a room where all sorts of builders' Hardware is shown. A patron may go to that room and have placed before him in endless array all the metal fittings of a house and make selections at leisure, being able to see the entire invoice and compare the several articles before they are installed.

In the basement are the house-furnishing and toy departments. Everything that the housekeeper needs is to be found there, and the toy section will be a delight to the little folk. The ventilating and lighting and power plants are in the sub-cellar, and they are as perfect as they must needs be to accord with the rest of the establishment. The offices of the firm are arranged for the greatest convenience of the staff and customers, and are well lighted and ventilated.

It is extremely doubtful whether, in Western New York, a more thoroughly complete Hardware establishment can be found, and the Messrs. Walbridge are to be congratulated upon the success they have achieved, and the brilliancy of their business prospects upon the occupancy of their magnificent new quarters.

Cleveland Galvanizing Works.

The Cleveland Galvanizing Works, 18-24 Cooper Street, Cleveland, O., having had fifteen years' experience in the galvanizing business, now have a plant that is fully equipped to do galvanizing in all its branches. They use in their work a method claimed by them as the most reliable one, which is the hot process. It enables them to make a specialty of bright, smooth and attractive work, which they are prepared to undertake for other manufacturers, either in gray or malleable iron. They state they can guarantee first class workmanship in machine work and metal die stamping, as their machine shop is in charge of mechanical experts assisted by the best of tools and necessary machinery. The Cleveland Galvanizing Works also manufacture white metal pattern letters, lead gaskets, pump chain, rubber buckets and lightning rod fixtures. They solicit correspondence regarding estimates and inquiries as to prices, as prompt attention is always given to such matters.

THE NEW YORK PUBLIC LIBRARY ASTOR, LENOX AND TILDEN FOUNDATIONS

Farming by Machinery.

Laborious toil for the cultivator of the land is rapidly becoming a thing of the past. The term "horny-handed tiller of the soil" within a few years will be relegated in the United States to the vernacular of the poet. Automatic labor-saving machinery is supplanting the necessity for bodily labor in all agricultural processes from the turning of the sod to the harvesting of the crop. What little manual labor is required is devoted to supervision of the working parts of the various machines employed.

In 1800 not a single cast iron plough was in use. The plough was home-made—of wood covered with sheet iron. The man with the hoe was the laborious cultivator. There were no mowers, reapers or self-binders driven by horse power. Grain was scattered by hand and harvested with the sickle or the scythe. It was threshed on the barn floor and ground into flour full of impurities, in rude grist mills, driven by great over-shot water wheels. In 1900 the ploughman uses a sulky plough, upon which he has a comfortable seat from which to guide a pair of horses. The machine does the rest. The reversible sulky plough is equally adapted to stony, rough, sidehill work or level ground. In the former case it turns the sod with the slope, in the latter it leaves the land without tracks or dead furrows. For this work a right and left-hand steel plough is mounted upon a steel beam, one being at right angles with the other, and easily revolved by unlocking a hand lever at the rear of the driver, the weight of the upper plough causing the lower to rise. Each plough has an easy adjustment to make it cut a wide or narrow furrow, and is raised out of the ground by a power lift and set in again by a foot lever, so that the operator has both hands with which to manage his team. An adjustable seat enables the driver to sit always in a level position and on the uppermost side in plowing side-hill land. In a few years horse labor will be dispensed with for moving this machine and some auto power substituted. It may be if electricity is employed that the farmer will be able to sit smoking his pipe on his porch, with a switchboard before him, and control many ploughs. With electric motors applied to all agricultural implements a single man may be able to plough, harrow, fertilize, sow and harvest his crops with no expenditure whatever of bodily labor or one cent of cost for the hire of human hands.

In earlier days the harrow was a crude, home-made square or triangular machine, on which wooden, and later iron, pegs were inserted. In some cases a log drawn to and fro was employed to level the furrows. In these times farmers use sulky-harrows of every imaginable form and device, according to the local condition. There is a pulverizing harrow, clod crusher and leveller combined in one machine. This crushes, cuts, lifts, turns, smooths and levels the soil all in one operation. It also prepares a perfect seed bed and covers the seed in the best manner. The operator from his seat on the machine effects all of these processes by turning a lever. Then there is a ball-bearing disk harrower with dirt-proof oil chambers. This machine does everything but supply the driver, automatically, with a glass of beer.

There is no more laborious kind of farm work than the spreading of manure; so much so that in farming on a large scale it is difficult to procure labor for the purpose. This can now be dispensed with. A machine called the manure spreader does all this work. It is drawn by horses and operated by one man. It breaks up and makes fine all sorts of manure and spreads it even upon the land in any desired quantity. It will spread very coarse manure, cornstalks or wood ashes, or guano—in fact, any manure or fertilizer, fine or coarse. Provided with a drill attachment it distributes compost direct in the drill before the seed is sown. It does everything in the manuring way except to use foul language.

When it comes to the planting of crops there is a machine for every process from the sowing of cereals, seeds and tubers, to the setting out of plants. For grain or grass there is a driving broadcast seeder, which is attached to an ordinary wagon. It also distributes all kinds of dry commercial fertilizers. It allows of the sowing of seed of any size. Then there is a grain drill, driven by horse power, in which the quantity to be sown is easily regulated by a lever. It is also provided with a land measure or clock which is adjusted before beginning the day's work. It is fitted with hoes which can be instantly changed by a lever, even while the machine is in motion, to run either straight or zig-zag. For grass seeding the hoes can be adjusted to distribute the seed in front of or behind them. There is also a fertilizer distributing attachment. There is still another grain seeder which weeds as well as sows. The riding corn and bean planter is a remarkable machine. It opens the soil, drops seed, covers and marks the next row at one operation. It drops corn in hills from nine to forty-eight inches apart, or for ensilage or fodder in a continuous drill. It drops alernately, if desired, a hill of corn and a hill of beans from nine to forty-eight inches apart. It also distributes fertilizer in a continuous drill at the same time the seed is dropped and both are covered by the single operation at any desired depth.

For the planting of tubers like the potato there is primarily a machine that divides this rot into halves, quarters or any number of parts, separates the eyes and removes the seed ends. It does the work of ten men. When it comes to the planting there is employed an automatic machine drawn by two horses, the driver occupying a seat at its front. It plants whole or cut potatoes at any distance apart desired. It drops the seed, covers it with moist under-earth, and marks for the next row at one operation. It also sows fertilizer, placing it just below the seed, after sufficient earth has been mixed with the former. It is provided with steel runners or discs to cover the seed and these yield to all irregularities of the soil. For the transplanting of plants, such as tomatoes, cauliflower, cabbages, celery, in fact all plants that do not require to be set nearer than one foot apart, the automatic plant setting machine will cover from four to six acres a day. An automatic check valve fitted to a tank attached to the machine lets water flow through a hose extending in behind the shoe or furrower, just before setting the plant. The flow can be regulated from one to six barrels an acre.

Formerly when crops were planted and had begun to grow, farmers and vegetable gardeners had to ply the hoe vigorously in order to loosen or cultivate the soil, or to keep down weeds. This was hard work, and moreover where growth was rapid and rank it involved hiring extra labor. The talent of inventors has reduced the fatigue of this agricultural function to a minimum. Most of these machines are light and operated by man power. There are others in which horses are used. Those who employ call them the greatest labor-savers of the age. There are some provided with a number of spring steel teeth which while they do not injure the plants, loosen and uproot the weeds. These are more on the principle of the harrow. There is a machine for cultivating and hilling celery. It is through the use of these devices that celery is marketed in such perfect condition, with every stalk bleached to its very top. Potatoes are cultivated and hilled up by a special machine that does the work of many men far more thoroughly and expeditiously than human hands can accomplish it. There are many machines combining hoe, cultivator, rake and plough. The latest machine ploughs, furrows, covers and hills; there are rakes for shallow cultivation, fining, levelling and pulverizing the soil; there are cultivator teeth for deep stirring of the soil, and flat hoes of different widths for loosening crust and cutting off weeds.

Every growing plant except cotton is now provided with a cultivator that does away with an immense expenditure of human toil. As yet no machine has been perfected that picks cotton with the discrimination of man. The difficulty to be overcome is to avoid injury to mature cotton balls that are

Digitized by Google

growing on the same plant with those that are immature. No doubt some method will be found that will overcome this defect. Then the Southern darky will find his services no longer so eagerly sought for as they are at present.

Machines to harvest crops come in every variety to perform a special function. Everyone is familiar with the mowing machine. It has driven the scythe out of use. Formerly there were men whose trade was confined exclusively to the use of this implement. None is following it to-day. The same is true of reapers and binders of grain; a single machine will do the work of twenty or more men. The old-fashioned flail to thresh grain is now a curiosity. The rattle of the power-thresher is a familiar sound in autumn to every resident of a farming country. The sulky hay-tedder will thoroughly turn and spread four acres of cut grass in an hour. This can be repeated so often that in a single day the crop of hay from that amount of land can be cured and stored. In loading the crop, human hands are no longer necessary, except to guide the team that draws the wagon. The machine hay loader will put on a load in five minutes. It takes the hay direct from the swath, though it will rake and load from light meadows.

There is a labor-saving machine for every agricultural process, most of them automatic. Farming in the future will not be synonymous with toil. What heretofore the farmer has expended in the hire of labor he will devote to the purchase of machinery. This does not consume food, neither does it sulk and throw up a job at the most inopportune moment, nor strike for higher pay. The farmer of the future will be more or less a man of leisure. The machine will do the work. The weather, however, as in the past, will suffice to make him a man with a grievance.

Advertisers' Corner.

English advertisers not only invade all street cars and omnibuses, but use all the outside space on such vehicles to such an extent as to puzzle a stranger as to where the car is going. The destination is always painted on the side of "tram" cars and omnibuses, but a countryman could not tell whether the conveyance was going to Battersea or "Beecham's Pills," to Bayswater or to "Herbaline." It must be trying to the out-of-town visitor to wait on a crowded corner for a "'bus' going to Brixton, and see a string of them passing, on which he can read, in bold letters, "Yorkshire Relish," "Hovis Bread," "Brooke's Soap," "Provost Oats," etc., but no decipherable mention of where the car would take him to!—*Printer's Ink.*

There is plenty of poor advertising for good articles, and quite as much good and clever advertising for very poorly managed stores. Advertising isn't the whole business, not by a long distance. It can be made the best part of it or the worst part of it, according to the inside management. The best advertising can be, and often is, negatived by inferior store tactics. It is not so much what you say as what you do that holds customers. The cleverest ad is often offset by a surly floorwalker, or an inattentive salesman. Do you pay as much attention to the inside of the store as to the outside advertising?—*Exchange.*

Shun the "ready-made" and "clipped" ads. Some of them may "fit" all right. The big majority of them are practically useless. The character of the store, the class of people it caters to, the kind of man who runs it, all have to be taken into consideration when writing the advertising. The man who uses ready-made ads rarely knows wherein lie the business-bringing qualities of an advertisement.—*St. Paul Trade Journal.*

Improved Business Facilities.

S. W. Cornell, an old established merchant of Brooklyn, has recently taken an additional building adjoining his Hardware store at 121 Court Street, and now occupies one of the best appointed premises of the kind in Greater New York. The interior arrangement of his new salesroom embraces great practicability and convenience, and is truly representative of what every Hardware store ought to be, both in appearance and principle. The shelving and fixtures consist of a complete outfit of the Warren system, originated, designed and manufactured by the J. D. Warren Mfg. Co., of Chicago, comprising their latest and most useful designs. It is built in sections of about eight feet in length and same in height (suited to the building), designated as base, glass front and wood drawer and drop leaf compartment cabinets. The base sections are made to set on the floor, with the glass front sections on top of them, the bases being double the width of the glass front sections so as to take the place of counter, forming a wide extension ledge for wrapping goods. The base sections are provided with large and small drawers strongly made for accommodating various kinds of goods.

Mr. Cornell's store contains seven sections of this patent shelving with bases, the first and second being sliding glass door display cabinets for carpenters' tools, guns and ammunition, bicycle sundries, etc., with a handsome background of rich red felt; the third, fourth and fifth of patent glass front interchangeable drawer cabinets for mechanics' tools, builders' Hardware and general shelf goods; the sixth and seventh of patent wood drop front drawers for miscellaneous Hardware. One special cabinet is devoted entirely to steel goods, shovels, spades, hoes and forks.

The drawers in the base section are of various sizes ranging from four inches to two feet wide, divided into two, four, eight and more compartments by the use of movable partitions; all the drawers are of graded dimensions so as to be interchangeable from one part of the store to another. The glass front cabinets are supplied with a great multiplicity of sizes of drawers, for accommodating large and small articles, and may also be interchanged from one part of the store to another. A sample board, covered with a rich red felt, is provided for attaching a sample of goods in each drawer behind the glass front, the stock being placed in same drawer, back of sample. This feature enables Mr. Cornell to show to plain view of customers a specimen of every different style tool or piece of builders' Hardware carried in his stock. To every wood front drawer is attached a neat brass hand pull, also patent card holder in which is placed a neat card on which is registered name, quality and price of stock. The glass front drawers are provided with an index card glued in groove cut on right hand side for recording size, selling price, amount, date and from whom goods were purchased, while an indicator attached to a neat chain hangs ready to drop over front to denote when stock is sold out, enabling anyone to quickly ascertain all shortages when making up orders. Thus throughout the entire system every conceivable point of convenience and economy of space has been studied out and provided for, both for saving the time of the customer and labor of the proprietor and salesman; also for the prevention of damage or loss of stock by rust, tarnish, or misplacement. The drawers fit so closely that the goods contained therein are absolutely protected from all dampness or dust, thus keeping stock in all its original brightness as when it left the factory.

The entire outfit is substantially built of choice antique oak, in dry rub oil finish, which gives it a most handsome and inspiring appearance from every point of view.

Mr. Cornell is fortunate in having two ambitious sons, competent and industrious young business men, who will cooperate with him in building up a large and prosperous trade.

Every mother probably admits to herself that she had the greatest comfort with her children previous to the time they learned to slam doors like their father.

The Texas Hardware Jobbers' Association.

The fifth annual convention of the Texas Hardware Jobbers' Association was held at Houston, Texas, June 18th and 19th, 1900, the following firms being represented:

Walter Tips, Austin, Texas; Huey & Philp Hardware Co., Dallas, Texas; Moroney Hardware Co., Dallas, Texas; Kenyon Hardware Co., Dallas, Texas; Blum Hardware Co., Galveston, Texas; Bering-Cortes Hardware Co., Houston, Texas; J. S. Dunlay Hardware Co., Houston, Texas; F. W. Heitmann & Co., Houston, Texas; Jos. F. Meyer & Co., Houston, Texas; Peden & Co., Houston, Texas; Roberts, Sanford & Taylor Co., Sherman, Texas; Heusinger Hardware Co., San Antonio, Texas.

While the attendance was not as large as other years, owing to the absence of a number of the members from the State, the meeting was one of the most successful held. A number of subjects were discussed, and papers sent by absent members were read, showing that the interest in the work of the association is not lagging. The association now counts twenty-five members, and includes in its membership every Hardware jobber in the State.

The following officers were elected for the ensuing year:

F. A. Heitmann, President, F. W. Heitmann & Co., Houston, Texas.

J. C. Bering, First Vice President, Bering-Cortes Hardware Co., Houston, Texas.

Ed. Strauss, Second Vice President, Waco, Texas.

Robert Eikel, Secretary-Treasurer, F. W. Heitmann & Co., Houston, Texas.

Executive Committee, Jas. Moroney, Moroney Hardware Co., Dallas, Texas; W. L. Sanford, Roberts, Sanford & Taylor Co., Sherman, Texas; R. F. Bell, The R. E. Bell Hardware Co., Weatherford, Texas; A. C. Goeth, Walter Tips, Austin, Texas.

While in the city the visitors were entertained by the members of the association located in Houston.

A carriage ride through the city was one of the most interesting features. As the Retail Dealers' Hardware and Implement Association of Texas held their annual convention in this city at the same time, all delegates of both associations and visitors were invited by the Houston jobbers to spend Tuesday evening as their guests at Angerhoffer's Park, where an elaborate lunch was spread, and the jobbers and retailers had an opportunity of becoming better acquainted. This entertainment was very much enjoyed by all.

One of the pleasant incidents of these meetings was the invitation extended by the retailers to the jobbers to attend one of their sessions in a body. When the jobbers marched into the hall where the Retailers' Association held its sessions they were greeted with hearty applause. An address was delivered by the president of the Jobbers' Association, F. A. Heitmann, and responded to by the president of the Retailers' Association, Captain W. H. Richardson, of Austin.

The Texas Retail Hardware and Implement Dealers' Association.

The Texas Retail Hardware and Implement Dealers' Association met in Houston at Saengerbund Hall, on 19th ult., with President W. H. Richardson in the chair and the following firms were represented: J. Blakey & Co., Ennis; Marable Hardware Co., Clarksville; George M. McDaniel, Georgetown; Joe J. Mickle Supply Co., Cleburne; J. A. Lierdemann, Bartlett; J. C. and W. O. Brown, Cleburne; Jordan & Morris, Lott; Cordon & Sadler, Gatesville; Shaffer & Weller, McGregor; Weakley & Watson, Brownwood; G. Schulz, Yoakum; George S. Hooper, Dallas; P. Hocan & Sons, Clarksville; H. P. Schaefer, Schulenburg; W. J. Murran, Holland; John Catron, Rosenberg; Oscar Kranshof, Fredericksburg; Burrows Bros., Beeville; W. E. Neyland, Goliad; Alfred Tips, Runge; Viroux & Son, Seguin; L. M. Gleason, Dallas; Adolph Boldt, Houston; J. L. Rymer, Ennis; Charles F. Welland, Dallas; San Marcos Mercantile Co., San Marcos.

The offices of secretary and treasurer were consolidated. The committee appointed to examine the accounts of the secretary and treasurer reported the same to be correct.

The following committees were appointed by the chair:

Auditing Committee—Messrs. Gunnell, Foote and Williams.

Nominating Committee—R. P. Lowe, F. D. Carroll, F. Desenberg, H. P. Schaefer, O. M. Pate.

Resolutions Committee—McB. Smith, J. W. McManus, T. T. Clark, R. P. Lowe, J. C. Burrows and W. H. Richardson.

Various matters affecting the welfare of the members and their business interests were discussed during the two days' sessions, among which were freight rates, express rates, discounts, "branch" houses, etc. The discussion of these subjects was of an informal nature and participated in by several of the members.

Dallas was selected as the next meeting place and the association adjourned.

The following officers were elected for the ensuing year: President, Captain W. H. Richardson, Austin; First Vice President, J. D. Hefley, Cameron; Second Vice President, C. Dickson, Cleburne; Secretary-Treasurer, James G. Blaine, Taylor. Executive Committee, J. L. Hollingsworth, Temple; A. L. Smith, Hillsboro; W. S. Allen, Calvert; R. P. Lowe, Weatherford; Edward Lewis, Gonzales; W. M. Grinnell, Martin; D. M. Smith, Sulphur Springs; T. T. Clark, Ennis.

The Arkansas Retail Hardware Dealers' Association.

The Arkansas Retail Hardware Dealers' Association was organized at a meeting held in Little Rock on the 12th and 13th ult.

The meeting was called to order by E. W. Horne, of Forest City, as temporary chairman. O. R. McDaniel, of Prescott, acted as secretary pro tem. About 60 dealers were present.

The following officers were elected for the year:

President, E. W. Horne, Forest City.

First Vice President, J. M. Pittman, Prescott.

Second Vice President, J. H. Morgan, Camden.

Secretary-Treasurer, J. A. Plummer, Marianna.

Executive Council, I. P. Rudolph, Arkadelphia; E. E. Mitchell, Morrilton; W. M. Harroll, Conway; F. C. Stearns, Hot Springs; J. A. Tappan, Helena.

The initiation fee was fixed at $5, to include the first year's dues, the fees thereafter to be $5 annually. The Executive Council was given power to levy assessments not to exceed $5.

The following standing committees were appointed:

Membership—R. L. Walsh, Plummerville; W. A. Jackson, Dardanelle; D. H. Miller, Van Buren.

Transportation—J. L. Davis, Magnolia; J. H. Boicourt, Little Rock; J. W. Lee, Fordyce.

Grievances—D. E. Watson, Hamburg; J. P. Simpson, Malvern; W. M. Graham, Clarendon.

Fraternal Relations—C. S. Norman, De Witt; W. B. Pillow, Helena; F. L. Kirkman, De Queen.

Programme—J. M. Pittman, Prescott; J. W. Lee, Fordyce; T. W. Edmonson, Van Buren.

The next meeting will take place at Hot Springs on June 18, 1901.

On the evening of the 13th a banquet was tendered to the members of the association by the merchants of Little Rock. It was a very elaborate affair. The dining hall was handsomely decorated with palms. The tables, arranged in T shape, were similarly ornamented. Jas. J. Mandlebaum, of Fones Bros. Hardware Co., acter as toastmaster, and he was a good one.

The banquet was extremely successful and thoroughly enjoyed.

Ancient Lead.

The etymology of the term "lead," says an English paper, has been the subject of much research, and, as a sequence, has given rise to great diversity of opinion. Professor Tychsen says that the word "bedil" has been applied to both lead and tin, and that it means "the separated." This may, therefore, be what Pliny calls "stannum"—lead from which the silver had not been wholly separated. The passage in Isaiah (Chap. i., ver. 25), appears to afford a confirmation, because the word there is put in the plural—equivalent to scoriæ, as something separated by fusion. In the oldest passage where "bedil" occurs (namely, Numbers, Chap. xxxi., ver. 22), the Seventy translate it by "oferet" (the Hebraic word for lead), and the Vulgate by "plumbum." The East has still another name for lead and tin—"anac," which occurs only in Amos (Chap. vii., vers. 7 and 8), but is frequent in Syriac, Chaldaic and Armenian, and comprehends "plumbum," "nigrun" and "candidum." As tin was brought from India, it is not unreasonable to assume that the oldest name, like "tombak," might be Malayan; but in the Malayan, "tima" is the name for both lead and tin.

There can be little doubt that the nigrum plumbum of the ancients was our lead. This metal, according to Pliny, they obtained in two ways—from their own lead mines, or from lead ore, which, on fusion, gave pure lead. It may appear singular that the ancients had lead of this kind in such abundance that Pliny was able to give it special notice, but it must be remembered that in ancient times small attention was paid to a little admixture of silver, and that this metal was only separated (by the old and imperfect process of smelting) when it defrayed the cost, which it did not when a quintal of ore only contained a few ounces, or, at the most, 1 pound of silver. Therefore, such ores were then simply used as lead, although, of course, silver refiners of the present time would find a lucrative means of extracting the silver even from the lead of the ancients. It was the use of these ores that gave rise to the opinion that the lead, and even copper, with which some of the oldest buildings were covered had become argentiferous. This, of course, is impossible; it was because the ancients either did not know how, or did not think it worth the trouble, to separate from them

THE NOBLE METAL.

At the same time, the ancients also obtained a considerable quantity of lead from the argentiferous ores, from which they separated the silver and revived the lead. The ore was finely pulverized, or stamped; it was then washed and roasted, and formed into a powder. This was put into a furnace, and the first fusion gave a regulus consisting of silver and lead, called "stannum," and was the same substance known to the metallurgists as "werk." If it was desired to separate the silver, it was again fused, not in the same furnace, but in a special refining furnace with a hearth of lixiviated ashes. The substance obtained by this second fusion was silver and half-vitrified lead, which fell into the hearth. The lead (called by Pliny "galena"—a word which also denotes "molybdæna") was again fused or revived, which then gave pure lead. In this manner were obtained

THREE DISTINCT PRODUCTIONS,

all used for commercial purposes: stannum, galena and plumbum nigrum. Pliny regarded these as component parts of lead ore.

The appellation "galena" seems to have been borrowed from foreign metallurgical works, probably from the Spanish. This is more probable than the derivation of Vossius from the Greek "splendere," especially as the Greeks have not the word "galena." Some writers have thought that Pliny gave three ways of obtaining lead only—from lead ore, argentiferous ore and galena; or that he meant that silver formed a third part, lead a third part, and slag a third part. Though it must be admitted that this passage of Pliny cannot be fully understood, it shows that the stannum of the ancients was neither tin nor a peculiar metal, but the werk of smelting houses. This has been confirmed by early writers on metallurgy—namely, Agricola, Excelius, Fallopius, Savot, Bernia and Jung.

The ancients used as a peculiar metal

A MIXTURE OF GOLD AND SILVER,

because they were unacquainted with the art of separating them, and afterwards assigned to it the name of "electrum." In like manner they employed stannum, which was obtained in a similar manner in the fusion of silver. In all probability this stannum was employed as lead before they became acquainted with a method of separating the two metals, and continued in use long after they had discovered a process, partly from habit and partly because it answered the purpose and was very easily obtainable. If the ore subjected to fusion was abundant in silver, this mixture approached nearer to the noble metals; if poor in silver, it consisted chiefly of lead. When it consisted of silver and lead only (stannum) it was soft and ductile; but if intermixed with other metals difficult of fusion, such as copper, iron or zinc, it was hard and brittle, and unsuitable for the purposes for which the stannum was employed.

The New England Hardware Dealers' Association.

The New England Hardware Dealers' Association recently participated in the annual Ladies' Day, which is one of the features of this Hardware association. It was appointed for Wednesday, June 27th, and was designed to include a trip to Nantasket Beach, and a fine dinner and entertainment at the Atlantic House. It was arranged so that the members and lady guests would meet at the wharf in Boston in ample time for the 12:20 boat, which gave them an extremely pleasant hour's sail down the superb Boston harbor, arriving at the Atlantic House in ample time for the festivities following. The house selected is admirably located at Nantasket, having a splendid ocean view on one side and the beauty of the Bay on the other, affording a fine display of ocean scenery. They were accompanied by the Ladies' Royal Orchestral Club, who furnished the music that formed part of the festivities, liberal selections from which were given during the hour before dinner was served. At 2:30 the company repaired to the dining-room, where two hours were spent in doing justice to an excellent menu, which, of course, included the necessary pet dishes of a New England shore dinner, together with more substantial *pieces de resistance*. The dinner was presided over by President George W. Burditt, who welcomed the guests in his usual genial manner. Owing to the length of the programme, it was designed that no after-dinner speeches should take place, so that the guests might return to the city with their lady friends at an hour not too late for unnecessary anxiety. They confined themselves to the regular schedule of the returning boats. Great credit is due the committee of arrangements for the provision made for the comfort of the guests and their entertainment while participating in the enjoyment of the festivities. The committee of arrangements consisted of President George W. Burditt, George J. Mulhall, Albert M. Wiley, Joseph Williams, Jr., Frank R. Washburn and James A. Farless. A finer day than the one selected for the annual enjoyment could not possibly have been found, the sail being delightful both ways, and enjoyable in every sense of the word. The entertainment was participated in by about 75 guests, which included a number of ladies.

"What do you consider the greatest object of interest in America?" asked Miss Cayenne.

"Well," answered the lecturer, "I arrived here yesterday, and——"

"Of course," she exclaimed, apologetically, "I meant the greatest object of interest next to yourself!"—*Washington Star.*

RECENT TRADE PUBLICATIONS.

WILSON BOHANNAN, 754-776 Lexington Avenue, Brooklyn, N. Y. Cloth bound catalogue of 161 pages, printed on good paper, finely illustrated, covering their line of patent padlocks, etc.; including bronze metal spring padlocks, combination drawer locks, combination chest locks, key drawer and chest locks, tubular rim night latches, mortise night latches, upright rim store door locks, mortise store door locks, key blanks, etc. These goods are shown in excellent taste, with complete descriptions and list prices, making it a very desirable book for the library of a Hardwareman.

The SIMMONS HARDWARE Co., St. Louis, Mo. Pamphlet catalogue, one of a series designed for their mail order department. Printed on thin paper, evidently designed for temporary use. This is called their Paint Catalogue 367, and within its pages are all the items essential to any one handling paints throughout the Hardware trade, covering a line of paints, oils and varnishes, stains, dry colors, white lead, etc., together with the necessary brushes, sand and emery paper, glass cutters, paper-hangers' tools, glaziers' tools, tacks of every description, window glass, step ladders, tin measures, etc. A very full and complete catalogue embracing the line referred to.

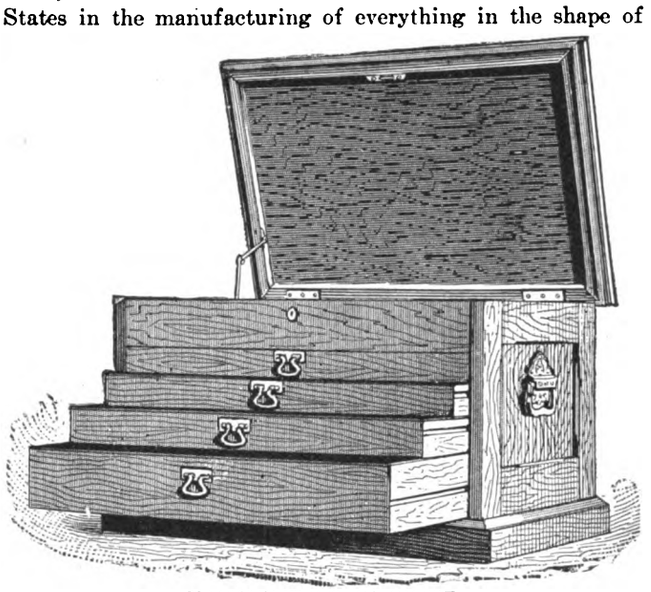
YOUNGSTOWN IRON & STEEL ROOFING Co., Youngstown, Ohio. Pamphlet catalogue of 80 pages, covering their line of manufactures, consisting in part of iron and steel roofing and siding, sheet metal lath, corrugated expanded metal lath, metal trough flooring for city and highway bridges, and fireproof buildings, Union metal corner bead for plaster corners. This is a very handsome catalogue, printed on coated paper, illustrated throughout with artistic half tone engravings, showing the application of the various articles manufactured by this company in matters of steel construction. Many of the fine buildings illustrated throughout the catalogue are noted by the company as having used in their construction some of their well known specialties. The catalogue is well gotten up, and reflects great credit upon their catalogue department.

WASHINGTON CUTLERY Co., Lehrkind & Daevel Co., sole distributers, Milwaukee, Wis. A handsome and attractive catalogue 9x11 inches in size, printed on good paper, fully illustrated, showing a complete line of razors, including hollow ground and safety razors, nail clippers, together with a full line of pocket knives of American manufacture, covering every necessary description for the completion of a Hardware stock. Included in the contents, we notice a full line of shears and scissors, including button-hole, manicure, embroidering and pocket scissors. They also make a line of solid cast shears and high-grade tinners' snips. A number of pages are devoted to butcher knives of every description, kitchen knives, putty knives, bread knives and carvers and steels. A selected line of American table knives and forks of the most salable patterns is given; also razor strops and other barbers' appliances, including toilet clippers, etc. The goods are all accompanied with list prices, a discount sheet being given upon application.

UNION LOCK & HARDWARE Co., Lancaster, Pa., Allerton-Clarke Co., 97 Chambers and 79 Reade streets, New York, agents. New catalogue of 32 pages, full catalogue size, fully illustrated, showing their extensive line of high-grade night latches and padlocks well known to the trade. These goods are well illustrated with full descriptions from which mail orders can be readily sent. A number of new styles have been added, attractive in appearance, giving every evidence of the progressiveness of this large concern.

STANDARD PAINT Co., 81-83 John Street, New York. Manufacturers of P. & B. Ruberoid Roofing. Sample sheet catalogue of their product covering this particular line, giving sample pages throughout of Ruberoid Roofing, half-ply, one-ply, two-ply and three-ply, conveying by an object lesson the utility of this product, which is presented for examination to the dealer receiving it, with a feeling on the part of the company that all who see it will be satisfied that this material is what they claim for it, that "it is the best prepared roofing in every particular in the market." In connection with this claim they state that "no paper whatever is used in its manufacture. It has as a foundation the best wool felt, except in the case of the half-ply, which is a combination of wool and hair. This is first thoroughly saturated with the P. & B. water and acid-proof compound, and afterwards coated with a hard solution of the same material, making the roofing at once light in weight as well as strong, durable and elastic." The roofing is put up in rolls 36 inches wide, containing two squares (or 200 square feet), with an additional allowance of 16 square feet for two-inch laps at seams. Included with each roll is sent sufficient tacks, tin caps and cement for laying the roofing.

ERIE SPECIALTY Co., Erie, Pa. Pamphlet catalogue of over 100 pages, covering a large and extensive line of important specialties manufactured by this well-known concern. They state that owing to the constant addition made to their goods annually they have adopted the policy of issuing a catalogue every year, which they mail to their regular trade and others on application, so that whatever orders may be given after date of issuing the catalogue shall always be understood to refer to the latest catalogue. Among the contents we notice the following important specialties: "Quick and Easy" cork pullers, the "Automatic," "Bull Dog" and "Samson" cork pullers; a full line of Walker's cork screws, one of their important lines, covering a variety. All the various styles of "screws" now before the Hardware trade are included in this line, and in this catalogue are numbered, so they may be ordered with certainty; self-pulling corkscrews, pocket corkscrews, a long line of wire corkscrews of various lines and numbers, many of which have held the trade for a series of years. In addition to the corkscrew line, of which they are large manufacturers, they likewise make champagne taps, lemon squeezers in a variety of patterns, all of great utility; milk shake appliances, bevel cutter and other ice shaves, cigar cutters in great variety, etc.



CINCINNATI TOOL Co., Cincinnati, Ohio. Pamphlet catalogue of 48 pages of Hargraves mechanics' tools manufactured by the above company, including hollow augers, screw and plug bits, screw clamps in large variety, including adjustable, joiners', cloth cutters' and carriage and machinists' clamps; plug and wash cutters, drills of every description in large variety; saw vises, spoke shaves and combination pliers, etc. The company state that the majority of their product, such as hollow augers, screw and plug bits, plug cutters, etc., are each tried and tested before leaving the factory. By this means they feel they can "confidently recommend the work as being of the very best that material and workmanship can produce."

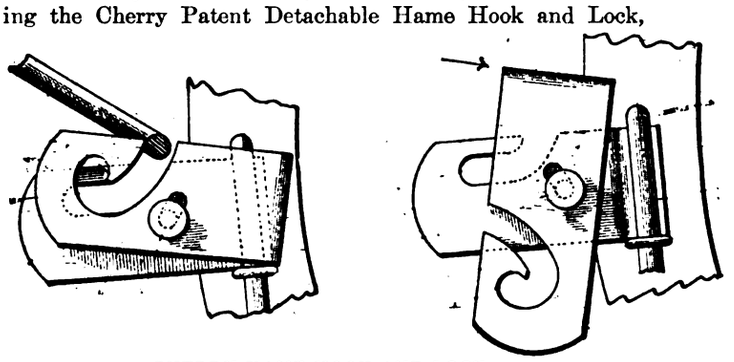
NEW GOODS AND SPECIALTIES.

Machinists' Tool Chest.

R. Bliss Mfg. Co., Main and Garden Streets, Pawtucket, R. I., are one of the oldest establishments in the United States in the manufacturing of everything in the shape of



MACHINISTS' TOOL CHEST.

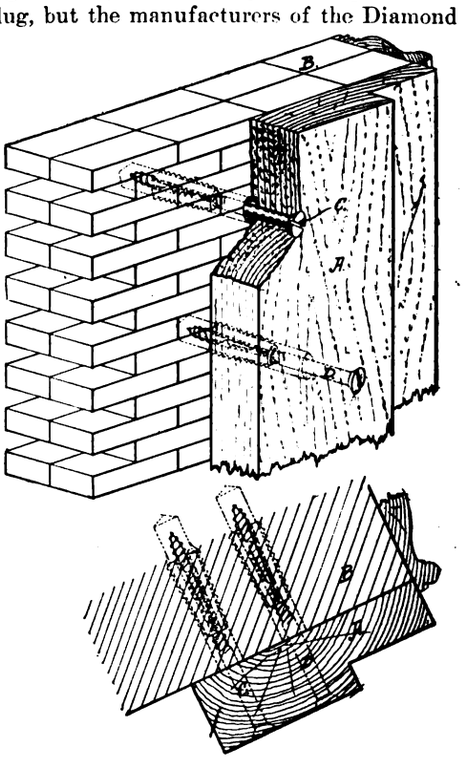
wood appliances for the Hardware trade. Among their numerous specialties they have been manufacturing for a long time the machinists' and jewelers' tool chest which we illustrate herewith. It is constructed in a superior manner, being manufactured in black walnut, cherry and oak, and is finished with a high-grade piano varnish, hand polished, provided with nickel drawer handles, Yale lock, improved stop joint for cover; in fact, it is intended to be a thoroughly high-grade chest. They are manufactured in two sizes, each of them with four drawers, varying only in the dimensions; No. 2, being 18x11 3-4x10 3-8 inches, and No. 3, 21 1-2x 14 3-4x12 3-4 inches. They represent a class of goods that it is the ambition of every Hardware dealer to sell, and the R. Bliss Mfg. Co. publish a catalogue of importance covering these and many other specialties of a similar description, worthy of the attention of the trade.

Cherry Hame Hook and Lock.

The Cherry Implement Co., Aurora, N. C., are manufacturing the Cherry Patent Detachable Hame Hook and Lock,

CHERRY HAME HOOK AND LOCK.

illustrated in this article. This very clever little device is an article of much greater utility than one would suppose. It is self-locking and adjustable, exceedingly easy to take off and on. Manufactured entirely of steel. The manufacturers desire to have these goods distributed to the trade entirely through the jobbing houses, and prices upon the same will be sent on application. The Biddle Hardware Co., Philadelphia, Pa., are Eastern agents for the sale of this desirable specialty, and a sample pair will be sent to those interested on receipt of 15 cents.



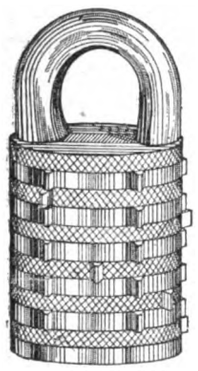
Diamond Expansion Bolt.

The New Jersey Foundry & Machine Co., 26 Cortlandt Street, New York, are introducing through the Hardware

DIAMOND EXPANSION BOLT, FIG. 1.

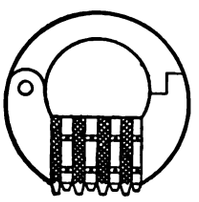
trade and those making a specialty of builders' Hardware, the Diamond Expansion Bolt, which is illustrated in Fig. 1. Every conceivable method has been used by metal workers in the past to attach iron or metal work to stone masonry, ranging from the simple form of wood plug and lag screw, to the more complex expansion bolt, quite a number of styles of which are now on the market. Engineers, architects and builders generally concede that the expansion bolt makes a better fastening than any of the old styles of wood and lead plugs, "split bolts and wedges," etc., which had previously been adopted for the want of something better. The expansion bolt, however, is not used as largely as it might be on account of their higher price in proportion, and which makes them more expensive than the cost of drilling through the wall, and using a regular bolt, and certainly more expensive than wood or lead plug, but the manufacturers of the Diamond Expan-

DIAMOND EXPANSION BOLT, FIG. 2



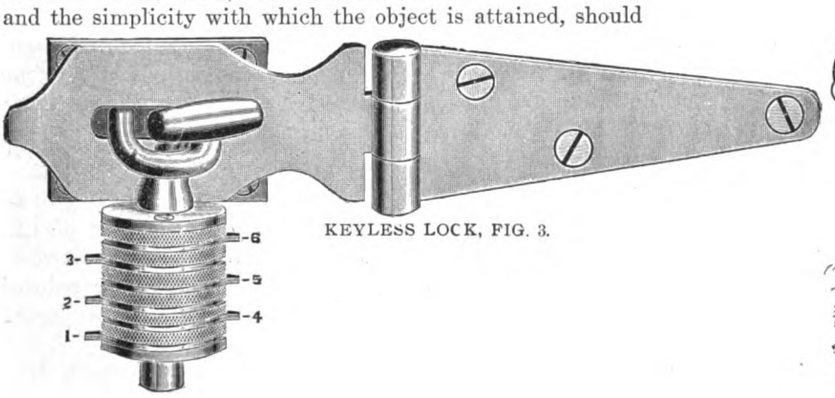
sion Bolt feel that they have invented an article of this kind superior in many respects to conventional devices, and at a price which will not prevent its extensive use. In calling attention to this expansion bolt, they refer to the following superior features which are considered worthy of mention: A great saving of time in attaching them to the masonry, owing to their extreme simplicity of construction, the shield being

Digitized by Google



composed of but two parts, which lock together, so cannot become disarranged or lost in the wall, which is a cause of frequent complaint with more complex styles of expansion bolts. When the roughened surfaces of the shields have been tightly gripped in the fibre of the masonry, Fig. 2, no amount of vibration or jarring causes the bolt to loosen its hold. Hardware dealers are enabled to carry them in stock with but little difficulty, as they need only keep the shields on hand, being enabled to supply any length of bolt by using lag screws from their regular stock. The company have gotten out a small sample for mailing purposes, and will be pleased to forward the same to those interested on application.

Keyless Padlock.



The Manufacturers Agents' Association, Inc., 131 North Broadway, Los Angeles, Cal., are placing before the Hardware trade the novel Keyless Padlock, illustrations of which we give in this article. It is made of solid brass, and is fully nickel-plated. The construction of it is in a series of metal disks, by the manipulation of which the lock is opened or closed. There are no tumbler springs, which lessens the liability of its getting out of order. The combinations are made and changed very readily, so that the lock can be operated as well in the dark as in the light, and it is capable of unlimited combinatons, and is as nearly burglar-proof as a padlock could possibly be. Fig. 1 shows the lock in its regular size, while in Fig. 2 it is shown in a 1-4 size cut as an ordinary padlock. Fig. 3 shows its use in connection with a hasp or staple for carpenters' or machinists' tool chests, farmers' barns, sheds, etc. The novelty of its construction and the simplicity with which the object is attained, should naturally make this new lock an extremely good seller. It is claimed by the manufacturers that it has never been picked.

KEYLESS LOCK, FIG. 1.

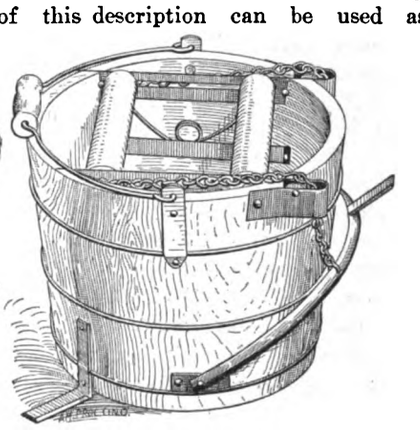
All-Steel Toy Express Wagon.



The Metal Goods Mfg. Co., of Cleveland, Ohio, have recently put on the market a full and complete line of All-Steel Toy Express Wagons, the style of which is shown in the accompanying illustration. They are extremely strong, durable and attractive, the manufacturers taking more than the usual pains to see that the finish corresponds with the constructional parts, which are of the finest quality. In the construction of this wagon, castings have been entirely eliminated, being superseded by steel stampings throughout. Another prominent feature noticeable on this wagon is the wheel, the flanges, hub and box of which are made entirely of stamped steel. In addition to that there is an upset spoke, which, when the wagon is under load, gives the tire a good fair surface on the upset portion of the same, making it practically impossible for the tire to bend in and slide down on the spoke. By this method of construction they have formed a very strong and durable wheel, one that is built for good service. The wagon is provided with a fifth wheel, which is a new idea, being made of pressed steel, and is so securely locked that while the front wheel may be easily turned, there is no rattling or "giving" backward or forward, as with the old-style king-bolt. In this fifth wheel is also a locking device entirely new by means of which the forward gear can be detached from the body of the wagon by turning the tongue entirely around to the rear. In ordinary use it is impossible for the gear to become uncovered. The manufacturers claim that their wagon, differing from most of such goods that are intended to be sold as toys, is constructed in such a manner that it will stand an enormous amount of abuse, as well as rendering good service to the user, consequently making it an easy and practical seller for both dealers and jobbers.

ALL-STEEL TOY EXPRESS WAGON.

Beech Patent Mop Wringer.

The Beech Novelty Wringer Co., Mansfield, Ohio, are engaged in manufacturing the Beech Patent Mop Wringer, an illustration of which we give herewith. It is intended to wring all kinds, shapes or sizes of mops. It is also adopted to the wringing of all kinds of unclean clothes with no necessity of touching them with the hands. A pair of pincers can be used to draw them through the rolls. Care of this description can be used as well in the mopping of floors or porches when applying boiling hot water or water in which purifying or disinfecting chemicals are dissolved, keeping the hands from coming in contact with either the water or the mop cloth, although in ordinary mopping it is recommended gloves be used. In the old-time methods of wringing a mop by twisting with the hands, the dirt is left in the centre of the mop, but with the wringer constructed on the principles of the "Beech," the water is not alone excluded, but at the same time all impurities are carried off, leaving the mop comparatively clean. These mop wringers have received the highest recommendations from penitentiaries and State reformatories, where the use of something of the kind is considered highly essential.

BEECH PATENT MOP WRINGER.

REVIEW OF THE MARKETS.

Wire Nails: There has been little or no change in the conditions surrounding the Wire Nail market since our last report. Trade, as is natural during July, is noted for its inactivity. Large transactions for domestic business are not anticipated, the business being very moderate. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. off in 10 days:

To jobbers in carload lots	$2.20
" less than carload lots	2.25
To retailers in carload lots	2.30
" less than carload lots	2.40

New York prices continue about as heretofore, the prices on small lots showing an occasional variation.

To retailers, carloads on dock	$2.48
" less than carloads on dock	2.61
Small lots from store	$2.60 to 2.65

Cut Nails: The meeting of the Cut Nail manufacturers which was in convention when our previous issue went to press, resulted in an anticipated concession. The terms were changed to 60 days, 2 per cent. off in 10 days, which was "a consummation devoutly to be wished." All mill shipments of Nails were reduced 10 cents per keg, and the rebate of 10 cents per keg formerly allowed jobbers was abolished; so that the price now prevailing is the same as they have previously enjoyed. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days, 2 per cent. off in 10 days:

Carload lots	$1.95
To jobbers in less than carload lots	2.00
To retailers in less than carload lots	2.10

New York prices have consequently been somewhat irregular, but the following may be said to represent the market:

To jobbers in carload lots on dock	$2.13
" less than carload lots on dock	2.18
To retailers in less than carload lots on dock	2.31
Small lots from store	$2.35 to 2.40

Barb Wire: A very light business is being done in this leading staple, but prices are well maintained. Quotations for domestic trade are as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	$2.50
" " Galvanized	2.80
To jobbers in less than carload lots, Painted	2.55
" " " Galvanized	2.85
To retailers in carload lots, Painted	2.60
" " Galvanized	2.90
To retailers in less than carload lots, Painted	2.70
" " " Galvanized	3.00

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

Plain Wire: No change of importance is noted in the Plain Wire market, and transactions are uniformly light. Quotations, being without change, are as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. discount for cash in 10 days:

	Base sizes. Plain.	Galv.
To jobbers in carload lots	$2.15	$2.55
" less than carload lots	2.20	2.60
To retailers in carload lots	2.25	2.65
" less than carload lots	2.35	2.75

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS.)

Nos.	Galvanized.
6 to 9 Base	$0.40 extra.
10 $0.05 advance over base	.40 "
11 .10 " " "	.40 "
12 and 12½ .15 " " "	.40 "
13 .25 " " "	.40 "
14 .35 " " "	.40 "
15 .45 " " "	.75 "
16 .55 " " "	.75 "
17 .70 " " "	1.00 "
18 .85 " " "	1.00 "

For even weight bundles, 50 pounds and over, advance price 5 cents per bundle on above.

Bright Wire Goods: The reduced quotations now prevailing on Plain Wire have caused the Bright Wire Goods manufacturers to announce a reduction in price on July 1st. The present discounts are 85 and 10 per cent., with the usual concession for large specifications.

Wire Rope: A reduction in the price of Wire Rope was announced on the 2d inst. by the associated manufacturers. The Plain is subject to a base discount of 35 per cent. and the Galvanized to a base discount of 30 per cent. The discount to dealers is 2 1-2 per cent., terms 2 per cent. discount for cash in 10 days.

Sledges and Hammers: At a meeting held in Pittsburgh since the date of our last issue, in which the leading concerns were represented, it was decided, on account of the lower prices on raw material, to make another reduction in current quotations of 5 per cent., making the present discounts on Heavy Hammers and Sledges in round lots 75 and 10 and 10 per cent., and on Light Hammers and Sledges 75 and 10 and 5 per cent., with the usual freight allowance. It was also decided to change the terms from 30 days net to 60 days, 2 per cent. off for cash if paid within 10 days from date of invoice.

Coes Wrenches: The Coes Wrench Co., Worcester, Mass., for whom John H. Graham & Co., 113 Chambers Street, and J. C. McCarty & Co., 10 Warren Street, New York, are agents, have made a reduction in the price of Coes Wrenches, the base discount being changed from 25 per cent. to 40 per cent., the extra discounts remaining the same as before.

Rivets: The manufacturers at a recent meeting made a reduction in the base discount on Rivets and also returned to the former terms, making 2 per cent. discount for cash in 10 days. The reduction in the price was made by the adoption of the discount of 62 1-2 per cent., instead of 57 1-2 per cent., which formerly prevailed.

Carriage Bolts, Machine Bolts, etc: The irregular prices at which this class of goods have been selling for some time caused a further reduction in prices to be made at a recent meeting of the manufacturers. We give herewith the regular Association prices agreed upon:

	Discount.
Common Carriage Bolts	60, 10 and 10
Machine Bolts with H. P. or C. P. Plain Nuts	70 and 10
Machine Bolts with C. & T. Nuts	70
Machine Bolts without Nuts	70, 10 and 10
Machine Bolts, blanks	70 and 10
Bolt Ends with H. P. or C. P. Plain Nuts	70 and 10
Bolt Ends with C. & T. Nuts	70

Coach Screws, Lag Screws, Etc. The following reduced prices on G. P. Coach Screws, Lag Screws, etc., were adopted on the 20th ult. by the associated manufacturers:

	Discount.
G. P. Coach Screws	70, 10 and 10
Cone Point Lag Screws	70, 10, 10 and 5
Skein Screws	70, 10 and 10
Forged Set Screws and Tap Bolts	40 and 10
Plow Bolts and Guard Bolts	50 and 10

Cold Punched Nuts: The decline which has taken place in the price of Iron has influenced the manufacturers of Cold Punched Nuts to make a reduction in their prices. Quotations announced by the manufacturers are as follows:

	Off List.
Cold Punched Plain Blank Square Nuts	4.30
Cold Punched Plain Blank Hexagon Nuts	4.40
C. T. & R. Blank Square Nuts	4.10
C. T. & R. Blank Hexagon Nuts	4.70
Cold Punched Plain Tapped Square Nuts	4.10
Cold Punched Plain Tapped Hexagon Nuts	4.20
C. T. & R. Tapped Square Nuts	3.90
C. T. & R. Tapped Hexagon Nuts	4.50

Hot Pressed Nuts: At a recent meeting of the manufacturers a reduction was made in the prices of Hot Pressed

Digitized by Google

Nuts. Present quotations are announced as follows:

	Off List.
Hot Pressed Blank Square Nuts	5.20
Hot Pressed Blank Hexagon Nuts	5.50
Hot Pressed Tapped Square Nuts	6.00
Hot Pressed Tapped Hexagon Nuts	5.30

Shot: The price of Shot has been advanced. Eastern quotations are now as follows, terms net cash 30 days, or 2 per cent. discount for cash in 10 days, with the usual concession of 40 cents per 100 pounds on ton lots:

	Per 25-lb. bag.
Drop Shot, sizes smaller than B	$1.40
Drop Shot, B and larger sizes	1.65
Buck Shot	1.65
Chilled Shot	1.65
Dust Shot	2.10

Lead Pipe, Sheet Lead, &c. An advance of 1-4 cent per pound in Lead Pipe and Sheet Lead is announced by the manufacturers under date June 25. Present prices are as follows, subject to the usual discount of 20 per cent.:

	Cents.
Lead Pipe, per pound	6
Sheet Lead, per pound	7
Tin Lined Lead Pipe, per pound	12½

Binder Twine: The following quotations are made on twine, f. o. b. New York, Philadelphia or Boston, with a reduction of 1-4 cent per pound for orders less than a carload lot and over 10,000 pounds, and a reduction of 1-2 cent per pound for carload lots:

White Sisal, 500 feet to pound	8½ cents.
Standard, 500 feet to pound	8½ "
Manila, 500 feet to pound	11½ "
Pure Manila, 650 feet to pound	12½ "

Cordage: The market for rope is only moderate and prices are by no means strong. The demand is far from brisk and quotations that follow may be said to represent the market, with a rebate of 1-4 cent for carload lots:

	Pounds. Cents.
Manila, 7-16 inch and larger	11¾
Manila, ⅜ inch	12¼
Manila, ¼ inch and 5-16 inch	12¾
Sisal, 7-16 inch and larger	8½
Sisal, ⅜ inch	9
Sisal, ¼ and 5-16 inch	9½
Sisal, Lath Yarn, Medium and Coarse	8

Manila Tarred Rope, 15 thread, is quoted at 12 1-4 cents, as is also Manila Hay Rope, Medium.

THE ALBANY TRADE.

The first half of 1900 has passed and a retrospect will show conditions in marked contrast with those existing a year ago. Then the dealers were active in seeking to cover their wants in manufactured goods for future periods, that had not as yet responded to the advances already made in base materials, but which promised ere long to move upward.

The advances came and the shrewd, far-seeing merchant was covered for his needs and the year ran along on a high value basis, bringing handsome profit in return for the investment. The strong tone of the market continued until about one month ago, when the most remarkable drop in price occurred that has ever been chronicled, and wire and nails at one blow were reduced in price by the manufacturer $20 per ton. It was like lightning striking an oak, and seemed to stun for the time every thinking merchant; recovering from the shock, the question whether the decline would immediately affect all lines of goods was at once canvassed. The prompt orders that came at once for nails and wire demonstrated the fact that goods were needed; that consumption of building material would be increased, and that the heavy blow the trade had sustained might after all be a blessing in disguise and serve as a stimulant to revive some branches of business that had been curtailed by the recent excessive prices.

Thus far it would appear that only those articles whose prices have been advanced beyond all reason show signs of weakness. The consolidations or trusts which have secured all the manufacturers in their particular line are able to maintain and control prices. Competition does not disturb them. but those that have not embodied every producer are finding sharp competition, and in bar iron, bolts, coach screws, washers, nuts and kindred goods a steady "sag" is very noticeable.

Weakness in prices of some leading goods caused by unloading surplus stocks or "over purchases" helps to keep prices on many lines low; in fact, jobbers are in evidence in preference to manufacturers where bargains are sought, and it is truthfully said that it is the buyer's market.

We think a fair report of the condition of trade in this section is that so far this year an increase in volume is the rule. There has been a spirited and lively demand for many leading lines, and if it continues and July 15th is passed without serious or wild breaks we can hope for a good, steady and healthy trade for the round-up of the century.

ALBANY HARDWARE & IRON CO.

THE PHILADELPHIA TRADE.

We are now in the midst of vacation season, and the Fourth of July as usual finds a large number of salesmen off the road taking a short rest preparatory to the Fall campaign. In conversation with our salesmen and customers we are led to believe that retailers' stocks are not large, and if the general prosperity of the country continues retailers will be compelled to buy with more or less freedom. This opinion is confirmed by the fact that, although our salesmen are off the road, we are receiving gratifying mail orders, showing that stocks are broken and that a demand exists for goods.

The weather is largely in the retailers' favor, as we have had a very warm spell, making a good demand for window and door screens, wire cloth and all usual hot weather goods, and when the retailers' stocks are bare on these lines they will naturally feel like buying for Fall trade.

The time seems opportune to express a wish that the Presidential convention should be held thirty days or not more than sixty days prior to the November election. It certainly seems unfortunate for business, that the conventions should be held five months in advance, thereby prolonging the campaign greatly to the interference of business. Should this period be limited to sixty days it would seem equally fair to both political parties, and would be a relief greatly appreciated by most business men.

It would seem as if we should call attention in this letter to the recent deaths of two prominent Philadelphia Hardware men.

The first was that of Henry Barnett, of the firm of G. & H. Barnett, makers of the well known Black Diamond Files, who died some three weeks ago. Henry Barnett, like his brother, George, was a self-made man, and the two brothers came here as young Englishmen many years ago, and apprenticed themselves to learn the file business, and gradually worked their way up until they were at the head of the business now bearing their names.

Horace Disston, who has just passed away, one of the well known Disston family of saw fame, was Vice President of that company, and was comparatively a young man, as, according to the papers, he was only forty-six years of age. This makes the second death lately in that family—Hamilton Disston, the former President, having died a few years ago.

BIDDLE HARDWARE CO.

THE PITTSBURGH TRADE.

Midsummer quiet is with us at present and trade reduced to its minimum for the year. Late orders for seasonable goods are taking about all the stocks in jobbers' hands, with the exception of haying tools. for which there is little call this year.

Vacations are in order, and the tired clerks appreciate their well-earned change and rest from the daily round of regular duties.

The first half of 1900 showed a good increase in sales over the corresponding months of 1899. Part of this is due to increase of values, but the tonnage moved is larger, showing a good consuming demand.

Collections have been very good, and we look for a Fall trade that will at least equal that of last year.

LOGAN-GREGG HARDWARE CO.

Digitized by Google

THE CLEVELAND TRADE.

The good fellowship that prevailed at the Southern Jobbers' Hardware Convention shows that all the people all the time are not engulfed in commercial supremacy. Some interest continues in making friendship as well as money, and this is hopeful. Such gatherings do more than party or missionary conventions to promote the spirit that makes the country strong and safe. Patriotism out of the party and religion out of the church in the world controlling the industries and appealing to high impulse and energy sanctifies society.

When business men decline to do mean things for personal gain because it would injure their competitors, that part of the vision that John saw in the Isle of Patmos, recorded in the 21st chapter of Revelations, is near at hand. The country can safely bank on integrity, wisdom and patriotism of the mercantile class, although ambition and greed may at times outrage morality, the cure will surely come through the influence of a great body of upright business men.

A pretense of patriotism in party platforms to aid in securing the spoils no longer fools any considerable number of people. Prejudice is still the devil's stronghold, and through ignorance if potent for evil, yet intelligence is increasing and party platforms appealing to passion and prejudice are not considered as available as they once were. Our elections are of great value when intelligent discussions of proposed policies take place, and this is what is to be more and more in demand.

There is an anxious waiting for a settled price on steel and iron; in the meantime a good business is forced by a demand that cannot be deferred. Orders are not large, but they are frequent, and great promptness of shipment required. The people have the money, and will gratify their wishes. The delay cannot be prolonged, as the consumer will compel business. This is a desirable condition when the pressure is from below. THE LOCKWOOD-TAYLOR HARDWARE CO.

THE BIRMINGHAM TRADE.

The conditions in this district are somewhat dependent on whether there is trouble with the labor organization. They have not yet agreed on a scale for the present year, beginning July 1st. We hope that an agreement will be reached which will prove mutually satisfactory to both sides. Trade is not satisfactory and there seems to be much hesitation on the part of buyers, feeling that the bottom has not been reached and that by waiting they will get an advantage. We have had too much rain and the reports are that the crops are badly damaged and this tends to check trade in the interior. The lumber trade are complaining that the demand for lumber has fallen off and consequently the price is nominal. Added to other things, this is a Presidential year and the general impression prevails that that affects trade and makes buyers more cautious. Taking all together, things are not very satisfactory and not such as to inspire bright hopes. We are not pessimistic and do not like to make reports that are not encouraging, but are making only a statement of things as they appear. Perhaps the wisest thing to do would be to be silent, but you want some kind of a report and here it is.

MOORE & HANDLEY HARDWARE CO.

THE HOUSTON TRADE.

We find a very peculiar condition existing in the Hardware and supply business, as prices are extremely irregular and quotations are made regardless of factory cost. This applies especially to the heavier lines, and it would seem that prices are prompted according to stocks on hand. Another remarkable feature is that the drummer has developed into a "bear" and is doing much to demoralize business by continually anticipating declines, especially when there is no prospect for them to take an order. The present course seems to be to persuade them not to place their orders, but to wait as long as possible.

Many large improvements that were not compelled to start at once have been shelved indefinitely, which is the direct result of these influences.

The volume of our business has been very satisfactory the first six months of this year, and if the last six months will do as well we will be pleased.

The incessant rains the first few months of this year have made the cotton and corn crop a little late and in some sections none will be raised.

The weather in the past few weeks has been very favorable and conditions have changed very much for the better, but at the present time it is difficult to estimate the cotton and corn crop of Texas, as it depends entirely upon the weather, and especially on a late Fall.

The wheat and other small grain crops is very good, as well as lumber and cattle, the latter two being a large factor in Texas products.

The general condition of Texas was never better than at present, the best evidence of this being the money in the banks unemployed, which has also caused a corresponding reduction in the rate of interest. F. W. HEITMANN & Co.

THE COLUMBUS TRADE.

We are having old time hot weather, and the salutation of "Is it hot enough to suit you?" is often heard. Harvest is in full blast. Wheat is nearly a failure, and dry weather in the spring makes a short hay and oats crop. Corn is doing well in most sections and will be a heavy crop from present indications. Trade is excellent, but prices are irregular. We are getting new prices daily, but just the reverse from a year ago. Then almost all changes were higher; now they are invariably lower. A year ago manufacturers said people must have goods and would pay the price. They found that dealers had good stocks and when they got out of goods of a certain size or make they got their customers to buy what they had when the other size or make would answer the purpose as well. Consumers have convinced the manufacturers that while they must have some goods at any price, they won't buy as liberally as they do when they think they are not being held up by combinations. Manufacturers are seeing their error and reducing prices. They had warnings from all sources, but would not heed them. Their common sense told they could force the normal quantity of goods on dealers or consumers at fictitious prices, but they would not allow common sense to rule. Now they are all scrambling for business, and we may see the same old cut-throat policy that ruled in 1898. We hope not, but unless manufacturers put prices where they should be, and then remember that no one manufacturer can get all the business, and that the other fellow has a right to exist, there will be trouble. A great many jobbers can also make application of this truth; that no jobber owns the world; and the other fellow will always bob up serenely and get a slice. THE SMITH BROS. HARDWARE CO.

THE ST. PAUL TRADE.

We have sold Hardware for many years and can truly say that such an unsatisfactory market has never existed, partly due to lack of business, making every jobber push sales at any price to get what little is in sight. We, of course, appreciate that every jobber's stock averages a lower cost than to-day's market and it looks as though they did not propose to get much over actual cost. We sigh for last year's conditions, when all were conservative in selling and were getting fair margins. Now the market is strictly a buyer's, and is taken full advantage of. We have had some rain. We cannot expect an average crop, but things do look more hopeful. Our section will not harvest one-third of the usual crop of wheat, but of other products, with usual rains, we shall have 75 per cent., which, with the higher prices which we hope will exist, will make a fair amount of money. The small purchases made by merchants at the present time are proper and the drawing in of credits is natural, as surely a less than usual amount of money will be the result of the most favorable conditions which can possibly exist between now and harvest time. C. W. HACKETT HARDWARE CO.

Digitized by Google

THE OMAHA TRADE.

The usual midsummer dullness is supposed to be at hand, but while perhaps as little noted as a year ago, there is, nevertheless, this feature, that orders, while numerous, are for smaller quantities than usual, and the trade are buying only such goods as are absolutely needed. That the demand is large and well assorted is evidenced by the numerous orders and the large assortment which they cover. The trade, without doubt, are in a waiting mood, buying only such goods as are necessary to keep their stocks complete, and when the upward movement begins, as there is no doubt it will, conditions will be favorable for it to reach a considerably higher level before it stops. The outlook for fall business was never more fortuitous. Throughout this state, conditions are particularly favorable for a bountiful harvest, though, of course, there are some localities where conditions are not as satisfactory as we might expect; yet this is always the case. Collections are rather above the average than below it, and indications are that the vacation season will be active enough to cause many of us to miss our needed recreation. RECTOR & WILHELMY.

THE MINNEAPOLIS TRADE.

Minnesota and the Dakotas, at least north of the southern portion of this state, have been suffering severely with drought all this season. Yesterday and to-day we have really had our first good rain since April. We hear of the total destruction of the small grain crops, all the farms being plowed under, etc., but we cannot believe that the damage is so great as seems to be the general impression. We have noticed the years of large rainfall and expectation of enormous yield the wheat does not thresh out, accounted for very largely by the large amount of straw. On the other hand, with light rainfall the growth seems to go into the heads, and many times the crops pan out much more satisfactorily than is anticipated. We trust this will prove to be the case this year. Fortunately, the farmers, country dealers and country banks, as a whole, are in excellent condition, and are in a better position to stand a shortage than ever before. There will be, without any reasonable doubt, a shortage of fifty to seventy-five million bushels of wheat in these three states. The increase price will help this out, but whether the price will be much more at harvest time is a matter of pure speculation, for where we are short the Southwest has a large crop.

The drought has affected our lumber mills quite seriously in preventing the logs getting to the market. All of our mills were closed down for some little time on this account. This fact has held the price of lumber somewhat more firmly and probably prevented a slump of one or two dollars per thousand. We believe lumber is too high, and that the price will gradually settle down to a lower level.

Without doubt, business in the Northwest will be materially curtailed, naturally. Jobbers generally will prefer to hold their goods rather than to put them out with almost a certainty that they will have to carry more or less of their customers, and the country dealers, of course, will be very cautious about buying.

Trade in the city is good and prices, excepting on a few staples, are well maintained. W. K. MORRISON & CO.

THE SAN FRANCISCO TRADE.

On this second day of the current month a local authority in making observations along trade lines and California's general production outlook, said: The downward drift in iron is causing the recognition that the market is an open one, with every man for himself, which, of course, engenders more or less cutting all along the line. Offerings are now in excess of the demand and prices are steadily declining. Over thirty furnaces have gone out of blast, and the reduction in quotations for structural iron has proven disappointing, for the expected increase in the demand has not appeared, making the iron outlook unfavorable. This is speaking of the general outlook; as to trade in California there is no pronounced change, which leaves the strictly local situation quite agreeable. The State is quietly harvesting a large and profitable crop of fruit and farm produce and is sending it away by the steamer and train load in satisfaction of a rapidly increasing demand. It is unquestionably a good year here, whatever it may be in other parts of the country.

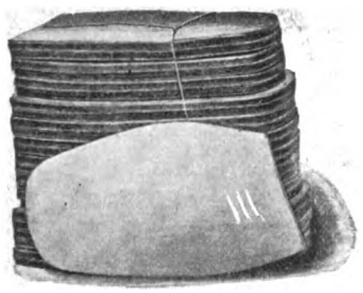
Yesterday, July 1st, was the inauguration day of the overland train service between San Francisco and Chicago on the Santa Fe system, and that Hardware retailers and jobbers are in line with the general enthusiasm prevailing over this long deferred competitive railroad is notably apparent. A sample of the State feeling is in this July 1st dispatch from Visalia, Cal., a town whose population is quoted at 2885: "About 3000 people were at the Santa Fe depot this morning to witness and welcome the incoming first overland train from Chicago. Boxes of choice fruit were given every passenger. The train was given a grand ovation. People cheered, shouted and waived handkerchiefs and hats in honor of the occasion. A brass band was in attendance."

Byron Phelps has been here for days attracting a crowd of builders at his headquarters with the Palace Hardware Co. He is here from the East representing a Corbin novelty in the way of a door lock that is self-commendatory and winning largely in the way of orders for the Palace Hardware Co., who are resident agents for the Corbin lines.

As per announcement two weeks ago, local retail Hardware dealers have rallied, almost unanimously and with united spirit of approval organized themselves into the San Francisco & Oakland Retail Hardware Association, with the following officers:

President, O. F. Sites, of the Palace Hardware Co.; Vice President, E. Nichols, of the Pierce Hardware Co.: Secretary, Henry Gracey, of the Krouse Hardware Co.; Treasurer, Joost Brothers, Executive Committee, Samuel V. Armstrong, of Philpot & Armstrong; Frank F. Osborn, of Osborn Hardware & Tool Co., and W. A. Etting, of Etting's Sixth Street Hardware Store. TRADES PRESS ASSOCIATION.

THE GRAPHITE INDUSTRY.



It is too early to get at the figures representing sales for the first six months, as reports are not in from all the salesrooms; but the increase over the first half of 1899 is marked.

General orders still continue to an extent that warns us not to delay the completion of our new factory. There is a tendency among the large buyers to order in smaller lots, but the orders filed for shipment are abundant enough to keep up the high manufacturing pressure, and if we should have a breathing spell it will enable us to get some stock ahead for the inevitable orders which must come later.

We simply keep busy in all lines and in spite of apparent disturbing influences look forward to a year's business which will satisfactorily overtop the banner year of 1899.

The locomotive equipment of the Erie is now one of the best and strongest of any road in this country. In December, 1895, there were 165 engines, each carrying a working steam pressure of 160 pounds. To-day there are 425, whose individual steam pressure is nearer 200 pounds. Of the 1,036 engines in service on the system, 84 are Vauclaire compounds and 1 a Cook two-cylinder compound, in addition to which are 206 consolidated locomotives with the Wooten type of boiler, a total of 321 engines having this type of boiler.

The Goodell-Pratt Co., Greenfield, Mass., are building an addition of 40x0 feet, giving an increase of something over 3000 feet

The Lidgerwood Mfg. Co., New York City, has received a request from the Russian Government for the price of the Miller conveyor for coaling vessels at sea. Germany has also manifested a keen interest in the device.

The Russell & Erwin Mfg. Co., New Britain, Conn., has commenced the erection of a $25,000 building as an addition to its plant.

SOLD BY ALL HARDWARE DEALERS.

According to the Baltimore News, the South produces on an average 10,000,000 to 11,000,000 bales of cotton, representing, including the cottonseed, a valuation of from $350,000,000 to $400,000,000. This enormous crop is produced on 5 per cent. of the total area of the cotton region. Of the entire cotton-growing territory of the South only 20 per cent. is now in improved land. It is possible, with new land added to the cotton-growing area and with more scientific cultivation, to increase our cotton production to 100,000,000 bales. It will be many years before we can conceive of the production of such a crop, but there is every probability that within the next twenty years the world will be demanding of the South at least 20,000,000 to 25,000,000 bales, and that the South will produce it with as much ease as it is to-day producing its 10,000,000 bales.

An automobile show will be held in Madison Square Gardn the first week in November. It will be held under the auspices of the Automobile Club of America and will be the first exhibition of automobiles on a large scale ever held in this country, and it is expected that vehicles of European manufacture will be included in the exhibit. A circular track will be provided in the Garden, so that various types of automobiles can be shown.

Few houses in Uruguay are provided with stoves for heating purposes. No chimneys or fireplaces are provided as a rule, one house recently built at a cost of $14,000 having for its only chimney a stovepipe from the kitchen.

The Pennsylvania Steel Co., Harrisburg, Pa., is prepared to make a large shipment of structural steel to Santiago, Cuba, intended for the construction of a number of bridges along a new railroad line some 30 miles from that city. About 15 employees of the bridge and construction department will go to Cuba to assist in the construction of these bridges.

Our Congressional Library building cost $6,300,000, Boston coming next, $2,300,000, and Chicago, $2,000,000. Our finest American college library building is that of Columbia University, a memorial erected by its president to the memory of his father; while Princeton, Cornell and other of our universities and colleges possess fine buildings, nearly all of which were erected in the past ten years.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Baltimore, Md.—The Hardware Supply Co. has filed its certificate of incorporation in the Record Office. The capital stock is $15,000, and the directors for the first year are William H. Whiting, J. Walter Abbott, Andrew V. Cutino, James Walker and Benjamin Glenn.

Champaign, Ill.—H. B. Scott.

Coeur D'Alene, Idaho.—Armand Perreroud.

Des Moines, Ia.—Articles of incorporation of the new Luthe Hardware Co. have been filed. The company is incorporated for $100,000. The incorporators are F. H. Luthe, C. J. Luthe, Norman Haskins, W. E. Odell and Thomas Updegraff. The company has been organized since the retirement from business of the old Patrick & Luthe Hardware Co., and will be ready for business in a short time. A handsome wholesale house is being erected for the company at the corner of Cherry and Eighth Streets.

Elba, Neb.—F. P. Miller Hardware & Furniture Co. Buy and sell Hardware and furniture. Capital, $5000. Incorporators: F. P. Miller, G. H. Miller, both of Elba.

Fountain, Minn.—Johnson & Peterson.

Hanska, Minn.—J. W. Thompson.

Hendricks, Minn.—J. P. Johnson & Son.

Hendricks, Minn.—Fjeseth & Erickson.

Houghton, Mich.—I. E. Swift.

Madison, Wis.—Marton Du Frenne, John J. Blied and Gus Schneider.

Meridian, Tex.—A. P. Cruse & Son.

Ord, Neb.—Beck Hardware Co. Buy and sell Hardware and general merchandise. Capital, $5000. Incorporators: G. H. Miller, E. T. Benshausen, A. J. Beck, A. Benshausen, all of Ord.

Pine Grove, W. Va.—T. F. Butcher.

Raleigh, N. C.—The Shuford Hardware Co. has been incorporated by the Secretary of State. The principal place of business shall be Sanford, Moore County. The incorporators are Jacob Thompson, A. J. Bynum, Jr., and Roland H. Hayes, and the capital stock is $4500.

Springfield, Minn.—Chas. H. Myer.

Springfield, Ill.—Oscar C. Rixson Co., Chicago. Hardware business. Capital, $18,000. Incorporators: O. C. Rixson, W. K. Fellows, P. Synnestredt, all of Chicago.

St. Louis, Mo.—Charles Loepfe Hardware Co. Capital stock, $6000. Incorporated by Charles Loepfe, Rosa Stewart, J. B. Corrigan and others.

Terre Haute, Ind.—Freitig, Weinhardt & Co. Hardware business. Capital, $12,000. Incorporators: B. McKeen, J. M. Freitig, A. J. Weinhardt, all of Terre Haute.

Willmar, Minn.—Lund & Olson.

Changes and Improvements.

Albany, Tex.—J. C. Taylor & Co. succeed The Remick-Colbert-Hughes Co.

Athens, Ill.—D. M. Primm succeeds J. E. Fulton in the firm of Fulton & Primm, becoming sole proprietor.

Bellefontaine, O.—W. McCracken & O. Armstrong succeed J. W. Dean.

Birmingham, Ala.—The Moore & Handley Hardware Co. has bought out the Perry Hardware Co.

Bloomington, Ill.—Holder & Milner have bought out Kepner's Hardware store and moved the stock to their store.

Burlington, Ia.—Ebner & Sons have moved to their new salesroom and made large additions to their stock.

Centralia, Mo.—The firm of Thomas & Johnson moves the implements into the Wallace Building, while Mr. Thomas retains the shelf Hardware and stoves.

Chattanooga, Tenn.—The name of the Hardware firm of Cavender & Hall, doing business at 700 Market Street, has been changed to that of Hall & Melton Hardware Co., by the withdrawal of J. W. Cavender, who has sold his interest in the business to the other two partners, who will continue the business.

Cleveland, Tenn.—Hawk & Hartsell succeed Wood, Hawk & Co.

Danville, Va.—The Dan Valley Hardware Co. is the new name of the consolidation of Thomas & Starlins, and Guerrant & Dodson.

Eden Valley, Minn.—J. O. Jenkins, of Maple Lake, succeeds R. L. Warner.

Jefferson, Ia.—William Robinson sells a half-interest in the Western Tool Co. to George W. Woodard.

Johnstown, N. Y.—J. T. Seimser has opened a store at 7 North Perry Street, where he is selling out the remainder of his Hardware stock, and expects to continue in business, making a specialty of shelf Hardware and house furnishing goods in the Hardware line.

Kirkwood, Ill.—J. H. Campbell buys the interest of his partner, R. W. Houston.

Mansfield, O.—The Miller Co., has purchased the Hardware stock formerly owned by Gorton, McKey & Gorton, and after arranging the stock and putting in a more complete line, will open to the public.

Mesick, Mich.—Fred Cooper has bought the Hardware store of John A. Evitts. Edward Wilson, of Sherman, will have charge of the store.

Miami, Fla.—Frank T. Budge has moved his stock of Hardware and furniture into his new building, corner of Avenue D and Twelfth Street.

New Carlisle, O.—B. W. Quick has moved his Hardware store to his elegant room on the east side of Main Street.

New Hope, Ky.—Merrimee & Saltsman have dissolved partnership.

Ogdensburg, N. Y.—The Charles Ashley Hardware business has been sold to Loveland & Chisholm, of Gouverneur, who have taken possession.

Orange, Tex.—The Sabine Supply Co. succeed Mount & Talbot.

Pittsburg, Tex.—Boyd, Ellis & Co. succeed Boyd Bros. & Co.

Fort Worth, Tex.—W. H. W. Triplett succeeds W. W. Triplett.

Richmond, Va.—J. E. Phillips & Son succeed J. E. Phillips.

Selma, Ala.—Johnson & Jones have dissolved partnership.

Tampa, Fla.—Notice is given that the Tampa Hardware Co. will meet on the 12th day of July and increase the paid-up stock from $15,000 to $50,000.

Toledo, O.—George W. Probert has sold his Hardware store at Raymer Street and Starr Avenue to Richard Clay, who will take possession at once.

Waitsfield, Vt.—It is reported that S. D. Waterman has sold out his stove, tin and Hardware business to William Palmer. Johnson have dissolved partnership. Mr.

Windsor, N. S.—A. P. Jones, sailmaker, has opened in connection with his sailmaking a Hardware and ship-chandlery business in store next to Marine Block.

Business Embarrassments.

Clark's Hill, Ind.—John E. Bates, Hardware dealer, has filed a petition in bankruptcy. Liabilities $2779.05; assets $2471.08.

Milwaukee, Wis.—William F. Arndt, a Hardware merchant doing business at 412 East North Avenue, has filed a petition in bankruptcy. His liabilities amount to $2438.34 and his assets $1133.41.

Mt. Vernon, O.—Charles A. Bird, Hardware dealer, has made an application to be declared a bankrupt. Liabilities $7,365.13; no assets.

Fires in Hardware Stores.

Bloomington, Ill.—The Hardware store of Miller & Sons has been destroyed by fire. Loss, $65,000.

Ennis, Tex.—J. Blakey & Co., Hardware, has been damaged by fire $200 or $300 on stock, and the damage on building is not estimated.

Long Prairie, Minn.—Fire has destroyed Barto's Hardware store. The building and stock were badly damaged. Loss on both about $1500.

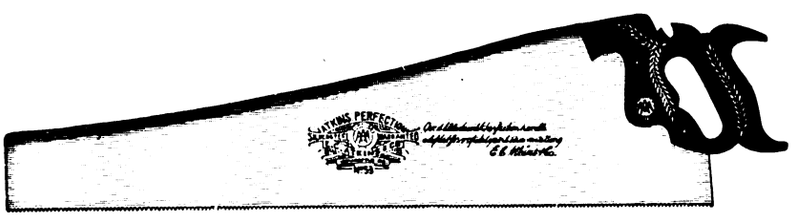
Moscow, N. Y.—Kink & Eddy's Hardware store has been destroyed by fire. Loss, $4000; insurance, $3000.

Simsbury, Conn.—S. T. Welden's Hardware store has been destroyed by fire. Fully insured.

Smyrna, N. Y.—The Hardware store of Lyons & Ferrin has been destroyed by fire.

St. Paul, Minn.—Fire in the workshop at the Hardware shop of Simmer & Marzof, Grove and Mississippi Streets, has caused a loss of $200.

Susanville, Col.—C. E. Emerson's Hardware store has been destroyed by fire.



Texarkana, Tex.—The stock of the Hoffman Hardware Co. has been damaged by fire. Loss $1000.

Tyler, Tex.—The warehouse of the Tyler Hardware Co. has been destroyed by fire.

Virginia, Minn.—A. Hawkinson's Hardware store has been destroyed by fire.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Buffalo, N. Y.—The certificate of incorporation of the American Bridled Brush Co., organized to deal in brushes, has been filed with the County Clerk. The capital stock is $12,000, and the directors are Stuart R. Mann, Alva E. Youmans and Elizabeth K. Mann, all of Buffalo.

Camden, N. J.—Pneumatic Tool Improvement Co. Manufacture pneumatic machines, etc. Capital, $150,000. Incorporators: J. W. Duntley, W. C. Strowbridge, T. Alderman.

Capital Park, Ia.—The new washing machine factory, located on Nineteenth and Hubbell Streets, is now completed and in operation. It is a two-story building, about 100 feet in length by thirty feet in width.

Chicago, Ill.—Oscar C. Rixson Co. Capital, $18,000. Manufacturing and dealing in Hardware. Incorporators: Oscar C. Rixson, William K. Fellows, Paul Synnestvedt.

Cleveland, O.—Standard Mica Co. Mining and dealing in mica. Capital, $10,000. Incorporators: W. H. Findley, R. C. Findley, W. F. Smith, J. T. Kelley, H. G. Stemming.

Cleveland, O.—The Buckeye Lamp Co. has been incorporated. Capital stock, $10,000.

Davenport, Ia.—Folding Wheel Carriage Co. Manufacture and sale of perambulators, etc. Capital, $30,000. Incorporators: C. E. Fanning, A. E. Steffen, O. C. Koehler, E. H. Ryan, W. R. Weir, all of Davenport.

Dover, Del.—Auto Mfg. Co., of Philadelphia, to make implements and tools of all kinds. Capital, $100,000.

Indianapolis, Ind.—Richmond Mfg. Co., Richmond. Hardware business, etc. Capital, $100,000. Incorporators: W. A. Miles, M. T. Gleeson, E. E. Perry, all of Richmond.

Jefferson, O.—Charles Aikens, of Rowenton, has opened a scythe-snath factory.

Jersey City, N. J.—Buckeye Rubber Co. Manufacture rubber and grow same. Capital, $10,000. Incorporators: W. J. Wright, of Demarest; I. Gans, of New York City; H. A. Bringham, of Oradell, N. J.; E. W. Wakelee, New York.

Joliet, Ill.—Triumph Adjustable Stove Pipe Mfg. Co. Capital stock, $15,000. Incorporators: George B. Barclay, H. T. Keltie and C. E. Antram.

Kokomo, Ind.—The Kokomo Wire & Nail Co. has a capital stock of $100,000. The directors are Harry Ward, J. E. Fredrick, Richard Ruddell, A. A. Charles, Al Trapp, J. D. K. Kennedy and G. W. Charles.

Lansing, Mich.—Wayne Stove Co., Detroit. Manufacture and sale of stoves. Capital, $5000. Incorporators: W. T. Owen, B. Briscoe, F. A. Prentice, R. Lau, Jr., all of Detroit.

Lehighton, Pa.—The Keyless Lock Co. has been incorporated. Capital stock, $100,000.

Milwaukee, Wis.—A new factory for the manufacture of stove parts, kitchen specialties, heating apparatus, etc., is to be erected by the A. J. Lindemann & Hoverson Co. at First and Russell Avenues, where the company recently came into possession of six acres of ground. The first part of the new plant to be built will be a foundry this Fall.

Northampton, Mass.—Rogers & Wood Co. Manufacture and sale of sterling silverware. Capital, $10,000. Incorporators: E. E. Wood, Jr., W. H. Gaines, G. F. Rogers.

Pittsburgh, Pa.—Pittsburgh Electrical & Machine Works. Manufacturing electrical appliances. Capital, $60,000. Incorporators: C. Schuster, F. Marzolf, both of Bellevue; C. K. Bergmann, H. C. Haslage, J. M. Goehring, all of Allegheny City.

Pittsburgh, Pa.—Carter Ball Bearing Chain Co. Manufacture of iron and steel. Capital, $100,000. Incorporators: R. A. Carter, H. L. Brant, G. T. Lewis, J. B. Armstrong, M. Brown, all of Pittsburgh.

Troy, N. Y.—The William Connors Paint Mfg. Co. Capital, $100,000. Directors: William Connors, Martin F. Connors and Thomas J. Connors, Troy.

West Newton, Pa.—The J. C. Bartlett Co., which will manufacture stoves, has elected officers as follows: J. C. Bartlett, president; E. Hoeveller, vice-president; L. A. Anshutz, secretary and treasurer. These, with Herman Straub, August Hartie and George N. Riley, will form the board of directors. Capital of the company was increased to $100,000.

Wilmington, Del.—Keyless Lock Co. Manufacture and sell patent locks. Capital, $100,000. Incorporators: O. W. Snyder, G. Sebring, both of Lehighton; C. E. Arner, J. Arner, both of Weissport; A. Weylenmeyer, O. F. Bittner, W. E. Bevan, all of Mauch Chunk.

Changes and Improvements.

Bucyrus, O.—The Shunk Plow Works are preparing to erect a new building, to afford additional room which is imperatively necessary. Their business has far outgrown the accommodations of their present building.

Chicago, Ill.—The Chicago Forge & Bolt Co., a corporation of Illinois, by President Fred M. Steele and Secretary George E. Van Hagen, has transferred to the American Bridge Works, also a corporation of Illinois, the manufacturing plant at Fortieth Street and Stewart Avenue for $300,000. The officers of both corporations are the same.

Corry, Pa.—A deal has been closed by which the Corry Radiator Works has passed into the hands of George L. Fordyce, of this city; A. T. Walton and W. K. Naylor, of Sharon, and several other gentlemen of that place. The new owners will form a corporation under the laws of Pennsylvania, with a capital stock of $100,000. A. T. Walton will be general manager of the plant.

Hamilton, O.—Kahn Brothers have broken ground for a new five-story addition to their stove works in East Hamilton.

Lancaster, Pa.—The Slaymaker-Barry Co. lock works, which were removed from this city to Connellsville several years ago, will be brought back to Lancaster in the near future and occupy their former plant, on West End Avenue.

Lisbon, O.—The Leetonia axe factory has been leased by A. L. Klaus, of Pittsburgh, who will give the plant an entire overhauling and fit it for the manufacture of all kinds of miners' and masons' tools.

Newark, N. J.—The Atha Tool Co. has broken ground for a three-story frame steel tool manufactory, 40x25 feet, with a two-story extension, 30x21 feet, on Chapel Street; estimated cost, $3000.

Newburgh, N. Y.—The Coldwell Lawn Mower Co. will increase their factory by an addition 70x120 feet in size, two stories high.

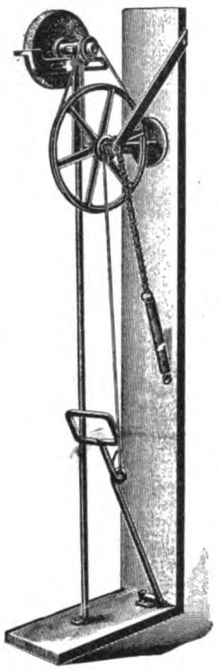
Oakland, Me.—The Dunn Edge Tool Co. has begun extensive repairs and improvements on its scythe and axe shops, and is making room for more business. The tempering room has all been taken down and will be rebuilt; the new room will be 60 feet long, which will make it twice as large as the old room. The hammer shop is to be extended about 25 feet, making room for two more hammers. A track will be laid across the stream and the scythes will be carried from the hammer to the grind room by rail.

Shelby, O.—The Easy Spring Hinge Co. has increased its capital stock from $50,000 to $60,000.

Syracuse, N. Y.—Plans are being figured for a brick warehouse to be erected at once by the Syracuse Stove Works in connection with their present plant in South Geddes Street. The building will be two stories high, with foundation walls 56x65 feet. It will be of slow burning construction and equipped with all modern appliances for a storage building.

Recent Fires.

Auburn, Me.—The Auburn Stove Works have been destroyed by fire.



Decatur, Ill.—The Illinois Cutlery Co.'s plant in this city has been destroyed by fire. The structure was gutted from top to bottom and nothing in the building was left. The total loss is estimated at $11,000, with an insurance of $7000.

Derry, N. H.—The handle factory of the Derryfield Syndicate Co. has been burned, no stock or machinery being saved.

East Pembroke, N. H.—The factory of H. C. Fisher, manufacturer of axe handles, has been burned.

PUMP SPECIALTIES.—Salesmen calling on the Hardware trade can do well in handling an attractive line of specialties in pumps and other articles. For particulars, address TORRENT PUMP CO., Cleveland, O. a

SALESMEN.—Wanted salesmen calling on the Hardware trade, to sell our line of water-purifying pumps and galvanized-iron tubing. Liberal commission. Address WILLIAMS PUMP CO, Norwalk, Ohio. 93

TRAVELING SALESMEN WANTED to carry my electric searchlight as side line. Good commission allowed. Night police, physicians and livery men are sure buyers. Address E. G. BRUCLER, Stryker, Ohio. 78

TRAVELING SALESMEN, to sell emery and corundum wheels, as a side line, on commission. Address 79 Langley Avenue, Detroit, Mich. 83

Wanted to Purchase.

PLATING OUTFIT.—Second-hand plating outfit, complete; about 200 gallons. Address CRESCENT MANUFACTURING CO., Fremont, Ohio. 94

WANTED TO PURCHASE an interest in a retail Hardware store, with moderate sized stock, in good condition and doing a good business. Location should be good, in a fast-growing town. Give reason for selling. Address, John R. Swartz, Hughesville, Pa. 42

Agencies Wanted.

ATTENTION, MANUFACTURERS.—For Sweden, Denmark and general export from Hamburg I desire the exclusive control and sale for above markets. Office at Hamburg from the first of January, 1901. Have been calling personally and very successfully on the leading Hardware jobbers in Sweden and Denmark since 1892, three times yearly, for Birmingham, and later for American Hardware merchants. Best references at hand. Thorough knowledge of the Hardware trade. Address H. HELSSEN, 22 Bismarckstrasse, Hamburg, Germany. 90

AS LONDON AGENTS.—Darney & Co., 56 Great Queen St., London, Eng., manufacturers' agents and importers. Seven years established. The introduction of novelties a specialty. 77

EXCLUSIVE BRITISH AGENCY—I am open to take up and push a good specialty. Full particulars to HALL, 42 Old Broad Street, London, Eng. 79

Agency Offered.

LIVE HARDWAREMEN.—We would like to hear immediately from a few live Hardwaremen who would like to be sole representatives in their towns, of a concern that is in the market for business, and have a line made for "men now on earth"—a modern line THAT CAN BE SOLD to your customers. Address "Box 88," care HARDWARE, 275 Broadway, New York. a

Minerals For Sale.

MINERALS.—A fine collection of minerals, secured by the late John G. Witte, and, costing the owner about $2000, can be obtained for $300 if application is made at once. Fine exhibition cases containing the collection may also be had if desired. Address, H. H., care HARDWARE, 275 Broadway, New York. a

Attention, Manufacturers!

FOR EXPORT TRADE.—We desire the exclusive control and sale of specialties for the European market. We have a branch house and complete organization at Hamburg, and are in touch with the most substantial European trade. Favorable arrangements will be made with manufacturers of unquestioned financial responsibility. Address, R. H. WOLFF & CO., LTD., 116th, 117th, 118th Street and Harlem River, New York. 56

BEST MATERIAL FOR THE PURPOSE.
THE ONLY TRUE EXPANSION.
WILL ALWAYS HOLD ITS SHAPE.

Write for prices and particulars and illustrated catalogue.

TORRENT PUMP CO., CLEVELAND, O., U. S. A.

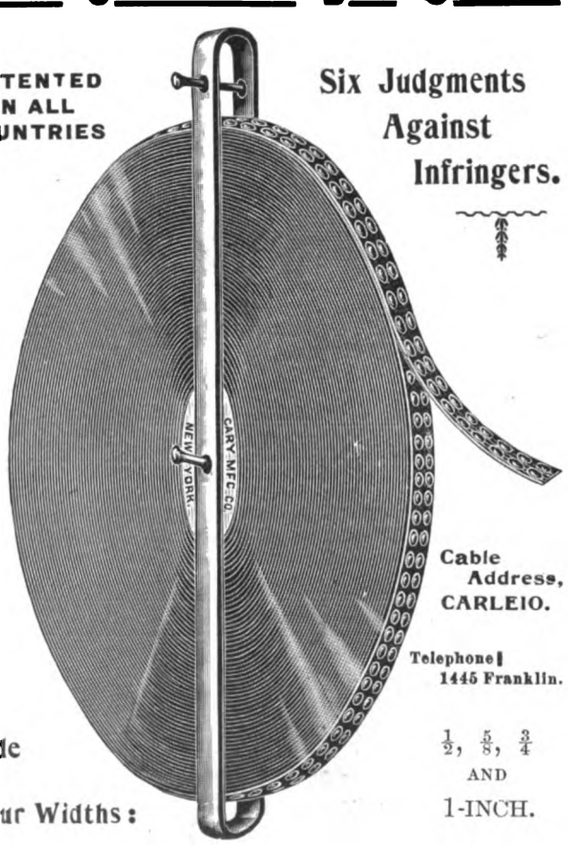
IMPROVED

YOUNG AMERICA SCALE.

It is Made of Steel. White Tile Top. Tin or Brass Scoop Top. Brass Dial.

BEST IN THE WORLD.

A most beautiful and attractive scale for all purposes. Beautifully enameled, ornamented and striped. Weighs 20 pounds by ounces. Occupies but little space. Is light and easily moved. It can be regulated by turning the brass screw on top. It is always ready and easily understood. It is a convenient scale to use and has no weights that may be lost. You can look this one in the face to prove its accuracy without looking for weights. Every scale examined before leaving the factory and warranted correct ——



MANUFACTURED BY

AMERICAN CUTLERY CO., Chicago, Ill.

CARY'S UNIVERSAL BOX STRAP.

Six Judgments Against Infringers.

Cable Address, CARLEIO.

Telephone 1445 Franklin.

Made in Four Widths: $\frac{1}{2}$, $\frac{5}{8}$, $\frac{3}{4}$ AND 1-INCH.

CARY MANUFACTURING CO.,

19 and 21 Roosevelt St., New York.

ALL THE NEWS. HARDWARE HARDWARE EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hardware Exclusively."

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

Has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.

It has just completed its **twentieth** volume and is consequently in no experimental stage, waiting to establish a subscription list.

HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

. . . PUBLISHED BY . . .

THE HARDWARE PUBLISHING CO.,

275 Broadway, New York.

PRICE $1.00 PER YEAR FOR 24 ISSUES.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

Smith & Egge Mfg. Co., Bridgeport, Conn. [*Traps, Locks, Chains, Pulleys, etc.*]: We have found your paper very useful as an advertising medium.

"HAVE FOUND YOU VERY USEFUL."

Alfred Field & Co., New York. [*Cutlery, Guns, etc.*]: We can say in all sincerity that we have found you very useful, and we can most cheerfully recommend you to our friends in the trade.

"EACH YEAR RECEIVED BETTER RESULTS."

Standard Tool Co., Cleveland, Ohio. [*Tools*]: During the four years we have had an advertisement in HARDWARE we have each year received better results.

"VALUE VERY HIGHLY."

Ausable Horse Nail Co., New York. [*Horse Nails*]: We value HARDWARE very highly as an advertising medium.

"ONE OF THE BEST MEDIUMS KNOWN."

C. T. Williamson Wire Novelty Co., Newark, N. J. [*Corkscrews*]: To present new goods to the trade we consider HARDWARE one of the best mediums known.

"RESULTS ARE SO SATISFACTORY."

Capewell Horse Nail Co., Hartford, Conn. [*Horse Nails*]: We have been liberal advertisers in your journal for years, and the results are so satisfactory that we expect to be much more liberal for many years to come.

STANDARD AND SPECIALS.

CINCINNATI, O., U. S. A.

FOR ENGINES AND MACHINERY.

Can You Afford- to carry in stock unknown brands of stove polish that your customers know nothing about, brands they do not call for, the quality of which is inferior, gives them dissatisfaction, and the consequent sale of which brings discredit to your store? Your best judgment answers NO! Then sell ENAMELINE, the Modern Stove Polish. Paste, Cake or Liquid If you are doing business for a profit it will pay you to handle our whole line.

J. L. PRESCOTT & CO., NEW YORK.

U. M. C.

"Smokeless" Shells.

Nitro Powders.

"U. M. C. No. 3" Primers.

All sportsmen know that the hands and arms, in shooting, become accustomed to the recoil produced by any uniform charge—and that the slightest unexpected variation of load will make a perceptible difference in their marksmanship.

It is because of the absolute uniformity of charge in U. M. C. Factory Loaded Shells—and the close attention paid to every detail of construction that they are so deservedly popular—being used more than any other shells of the same grade in the market.

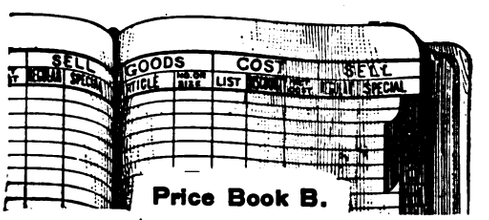
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



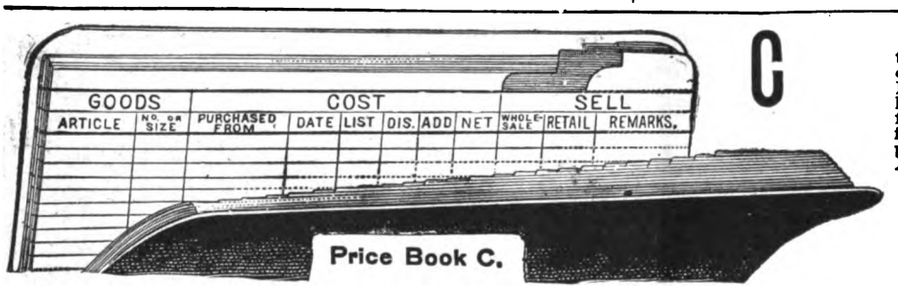
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. *Size of page, 4 x 7 inches.*

FOUR EDITIONS:

A, 200 pages,	$1.00	**A 2**, 400 pages,	$1.50
A F, 200 pages with flap,	1.25	**A F 2**, 400 pages with flap,	1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. *Page, 4 x 7 inches.*

FOUR EDITIONS:

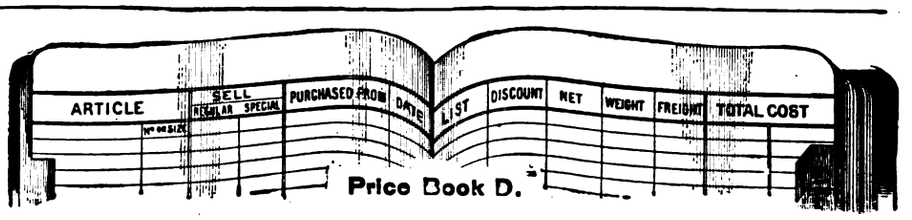
B, 200 pages,	$1.00	**B 2**, 400 pages,	$1.50
B F, 200 pages with flap,	1.25	**B F 2**, 400 pages with flap,	1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. *Page, 4½ x 7¾ inches.*

FOUR EDITIONS:



C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75

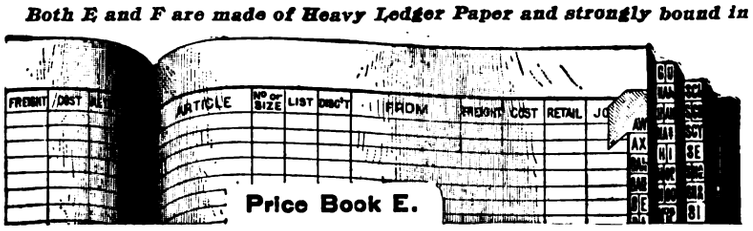
Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. *Page, 5¼ x 8 inches.*

FOUR EDITIONS:

D, 200 pages,	$2.00
D F, 200 pages with flap,	2.50
D 2, 400 pages,	3.00
D F 2, 400 pages with flap,	3.50

D

Price Book D.



MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers,	turn to AU	For Chisels,	turn to CHI	For Iron,	turn to IRO
" Parers, Apple	" PAR	" Cutlery,	" CUT	" Irons,	" IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

E

HARDWARE

It is a remarkable fact that J. S. Fanning is again "high gun," winning more laurels for Laflin & Rand Smokeless. On July 4, 1900, at Swanton, Vt., the Robin Hood tournament was held. Mr. Fanning, Laflin & Rand's representative, attended that tournament and made a record of 143 straight out of 145. What more convincing statement can be asked in evidence of the uniformity of L. & R. Smokeless?

Few if any pocket oilers before the Hardware trade possess the merit of the "Perfect" pocket oiler manufactured by Cushman & Denison, 240-242 West Twenty-third Street, New York; and there are few, if any, Hardware dealers unfamiliar with this fact, after having given the first sample order. This firm reports the most successful year in their history, and they are constantly adding to their facilities to meet the increasing demand.

C. E. Sontum, of the import and export firm of C. E. Sontum & Co., Christiania, Norway, advises us under recent date that it is his intention to be at the Paris Exposition about September 1, and he will take great pleasure in meeting the representatives of any American manufacturers and exporters who desire a market for their products in the Scandinavian countries. His address in Paris during his stay will be care of the Norwegian and Swedish Consulate.

Since the new show card, representing two moose, has been issued by the Union Metallic Cartridge Co., there have been so many inquiries for the picture itself, by parties not in the trade, that they have found it necessary to make an arrangement with the lithographers to furnish the picture without the frame, packed securely in tubes, express or postage paid. This can be obtained by addressing the Union Metallic Cartridge Co., 313 Broadway, New York City, on remittance of $1.00.

The Wire Goods Co. have recently acquired and taken over the entire business of the American Wire Goods Co., of Lowell, Mass. The Lowell concern have been competitors, to some extent, of the Worcester Co., and this acquisition by the latter company of all the property of every nature will tend to give them even greater prominence than they now hold in the wire Hardware market. There has been some difficulty and delay in obtaining the popular numbers of wire coat and hat hooks that have always been made by the Lowell concern, but we are assured that the Wire Goods Co. will hereafter hold themselves in readiness to supply these goods in any quantity desired.

The Winsted Edge Tool Co., Winsted, Conn., whose factory was recently destroyed by fire, have almost completed a new factory building on the same site, and will be ready to have their works in operation again at an early date. They will have some of their force of workmen employed by August 1, with the view of completing orders already in hand.

The Victor Mines Supply & Hardware Co., Victor, Col., are making great improvements in their store by an installment of Warren Cabinet Shelving. J. A. Nelson & Co., Round Rock, Tex., have also placed an order with the J. D. Warren Mfg. Co., of Chicago, for Warren Shelving. They also recently booked an order from P. Mercx, of Tilburg, Netherlands.

The interest in revolver shooting, which has been stirred up by the international revolver match, recently shot off at Paris and Greenville, N. J., the results being sent by cable both ways, is shown by the demand for the French target, which may be had on application to either The King Powder Co. or The Peters Cartridge Co., Cincinnati, Ohio, or to their Eastern department, 80 Chambers Street, New York City.

The Retail Hardware Implement and Vehicle Association of the Indian Territory was permanently organized on July 12th at South McAlester, I. T., starting with thirty charter members. The following officers were elected for the ensuing year: Thomas Hale, Durant, President; Deck Miller, Poteau, Secretary; J. B. Spraggins, Ardmore, First Vice-President; I. P. Smith, Caddo, Second Vice-President; Clarence Turner, Muskogee, Treasurer. The object of the association is for the protection of the commercial interest of its members.

The Continental Tool Co., of Frankfort, N. Y., has appointed John H. Graham & Co., 113 Chambers Street, New York City, its exclusive selling agents for export for its complete line of manufactures, including forks, hoes, rakes, shovels, etc., and also its domestic agents, to handle in conjunction with the regular salesmen of the company, the product of its shovel factory. For the convenience of the trade a stock of the shovels will be carried in New York City by John H. Graham & Co.

Under the original title of "The Knight of the Grip," the David Williams Co., 232-238 William Street, have published a very entertaining series of sketches having reference to the daily life, methods, and opinions of the commercial traveler, transcribed by one of the best informed trade students of the commercial character. The sketches are designed to form "a series of dissertations on his conditions, character and conduct, as they appear to an ordinary chap who has studied them." The sketches composing this volume of 179 pages were originally published, serially, in the columns of our contemporary, *The Iron Age*, and are now grouped with a number of other articles, similar in scope and interest, making a book which any old or young traveler will enjoy equally with those to whom said traveler makes his periodical pilgrimages. The price, cloth bound, is 60 cents.

The Pacific Coast Hardware and Metal Association, at their annual meeting this month, elected the following officers for the ensuing term: President, Charles F. Tay, of George H. Tay Co.; First Vice President, Frederick Motte, of Motte & Hunt, Tacoma; Second Vice President, L. C. Sheller, of the Union Hardware and Steel Co., of Los Angeles; Third Vice President, T. D. Honeyman, of H. de Hart & Co., Portland; Treasurer, Joseph Sloss, of Miller, Sloss & Scott; Executive Committee—Wakefield Baker, A. A. Watkins, A. L. Scott, H. J. Martin, of the George W. Gibbs Co., W. R. Wheeler, Andrew Carrigan, George S. Scovel of the Lloyd-Scovel Iron Co., of San Francisco and Los Angeles; Advisory Committee—Brace Hayden, of the Dunham-Carrigan-Hayden Co. The Advisory Committee consists of the ex-presidents, of which Mr. Hayden is the only one up to date.

HARDWARE

VOL. XXI. JULY 25, 1900. NO. 8.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the

HARDWARE PUBLISHING CO., No. 275 BROADWAY, NEW YORK.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

L. E. MITCHELL, - - President
A. P. MITCHELL, - - - Secretary and Treasurer.
W. C. BRUNDAGE, - - Business Manager.
HENRY HOPKINS, - - Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

Editorial Trade Review.

The trade is in the midst of a grateful vacation season. The cogitations of the workers in the business from buyer to office boy, are upon the subject of how much real enjoyment can be extracted from a ten days' or two weeks' allowance of time. Methods for recuperation from the strain of a year's hard work, one in which laborious application has been giving a continuous performance, are occupying the minds usually devoted to solving the problems of trade and traffic. The generous hope is indulged in that the boys and men as well will return later to their accustomed routine with invigorated mentality, freshened activity, and a more persistent push.

There are few duller months in the year's round of work than the month of July, and the active participation in necessary duties belonging to the coming season, is in that month more of a preparatory character than otherwise. Short inventories of individual lines, comparisons with past orders and results, a careful collating of changing quotations and competitive bids for August orders are among the possibilities for the month to those continuing to work.

Orders from the retailers give every evidence from their widening lists of wants of retail stocks being in anything but an overloaded condition. Even the heavy stocks known to exist in jobbers' hands during the Spring, have been reduced or used up utterly, by judicious price cutting on some lines, which recent concessions in current quotations have shown the wisdom of offering.

Heavy Hardware generally, as previously noted in this column, feels the necessity for an immediate adjustment of prices based upon the lower quotations obtainable on raw material which forms so large a percentage of its cost. These goods at the outset advanced so promptly when the market was daily being strengthened by higher quotations arising from inability to make deliveries, that the trade grown wise by experience, demands corresponding reductions as fast as the conditions of the market indicate weakness or increasing stocks.

Many of the companies manufacturing heavy staples have already "trimmed their sails to catch the favorable winds," suiting the market prices to the new conditions. Orders are being given, in some cases under semi-official guarantees against concerted declines, and the feeling gains strength by comparison of views, that prosperous conditions will make the Fall trade prove to be a steady demand, without speculative features. Good, fairly averaged stocks in many sections are making collections good, and producing in the retailer the feeling of confidence so essential for a full development of effort underlying a season's progressve business.

Money is in good supply in all the trade centres; our manufacturers are falling over one another in their announced willingness to restore the old terms of sale of "60 days or 2 per cent. ten days," which were abrogated when the sun of prosperity was daily making a new record; and every indication seems to point to a good trade at fair prices, an average profit and regular demand for consumption and not for show.

Delayed orders for Fall stocks does not mean a stoppage of orders for good and all, but only that under prevailing conditions it behooves the foxy buyer to take a few days' fishing at this critical period, with the hope of reaching a more favorable state of affairs from a buyer's standpoint, when he again assumes the reins at the purchasing department. While sales for July are not reported universally as being ahead of last season, it should not be looked upon as indicating a shrinkage in sales for the season, but simply that no eagerness exists to purchase under unsettled market conditions, which are rapidly assuming features of a satisfactory permanency.

The prevailing drought which so seriously affected the promise of the growing crops in some of the Western States has been suspended by copious rains, that will change the condition of the crops that were jeopardized; and the prospect of a larger percentage of prosperity being granted will improve the general result, and pessimistic views respecting crop probabilities will be disregarded in the increasing harvest.

It must not be forgotten by the dealers who hope for a successful season's trade that it is impossible of accomplishment without stocking up. The large houses with the imperative necessity for carrying immense stocks will always have an advantage over the hesitating buyer whose fears incline to nullify his judgment. No permanently prosperous conditions can be anticipated nor the manufacturer kept out of forbidden territory except by the jobbers themselves ordering ample stocks to supply their usual trade, and avoiding all reliance upon "rush orders by express" to keep their trade intact and expect a profitable dividend at the stock-taking period.

Changing from a Credit to a Cash System.

Editor "Hardware"—I would like to hear from the Hardware dealers (through *"Hardware"*) of New York, the experience you have had in changing the retail Hardware business from granting considerable credit to that of cash to every one, either a large or small purchase. We are located in a town of 1,500 inhabitants; we are almost wholly dependant on the farming class for our trade. Please describe fully how it affected your business, how long a time did you notify the trade before starting the cash system? What class gave you the most trouble? What general advice would you give to make a success? Would you return to granting credit? Suppose a party you knew to be a strictly first-class man would ask you for credit; would you advise loaning him the money, taking his note for a reasonable length of time, with 8 per cent. interest? Yours truly. A. B. C.

Digitized by Google

Forehand and Hopkins & Allen Arms Co's. Consolidated.

Final papers have been passed by which the Forehand Arms Co.'s business passes into the hands of a Norwich, Ct., syndicate, which will unite the business with that of the Hopkins & Allen Arms Co. of Norwich, recently burned out.

The new corporation is capitalized for $262,500. Its name has not been determined upon, excepting that it will contain al three of the names, Forehand, Hopkins and Allen, probably as the Forehand, Hopkins, Allen Arms Co. A large plant will be built at Norwich, on the site of the Hopkins & Allen factory, which was destroyed by fire in January.

Work on the plant will begin immediately. When it is completed the Forehand Arms Co.'s business will be removed from Worcester, and with it a part of the 275 men employed at the factory on Gardner Street. This will not be until January at the inside.

The officers of the Forehand Arms Co. are Frederick Forehand, president; Charles E. Forehand, secretary, and B. P. Greene, treasurer. All these are assured salaried positions with the company as managers of the Worcester plant as long as it remains here. It is understood that Mr. Greene will go to Norwich with the business as manager. Frederick Forehand will be a director of the new company and may have an active office in the management. Charles E. Forehand will end his connection with the business with the removal.

The Forehand Arms Co. makes sporting revolvers and shotguns. The Hopkins & Allen Arms Co. had the same product, being a rival of the Worcester concern. When the business at Norwich was destroyed a new company was formed, which fell through, owing to a difference of opinion among the stockholders. Then a syndicate was formed, which assumed the name of the corporation which had wound up its financial affairs.

Unless an established plant could be included in the plan it would take more than a year to build a new shop, equip it and establish a trade, so the Forehand Arms Co.'s business was selected, as one of the strong concerns of the country. The company will add rifles to its product and several new models of revolvers.

The Forehand business was established in 1832 by Ethan Allen, at Norwich, to which place it now returns. Mr. Allen came to Worcester soon afterward, and began business here in partnership with Charles Thurber as Allen & Thurber. Later Mr. Thurber retired and T. P. Wheelock took his place in the firm, which became Allen & Wheelock.

In 1865 Sullivan Forehand and Henry C. Wadsworth, Mr. Allen's son-in-law, were taken into partnership, and the firm became Ethan, Allen & Co., and at his death, in 1865, Forehand & Wadsworth. Mr. Wadsworth retired in 1883, but the firm name was continued until the business was incorporated in 1890 as the Forehand Arms Co. Since the death of Sullivan Forehand his two sons and Mr. Greene have successfully conducted the business.

All sorts of small arms have been made at one time or another. During the war army revolvers, and revolving carbine rifles were made for use in the Union army.

H. W. Webb & Sons.

The business of the old firm of H. W. Webb & Son, Baltimore, Md., after an existence of a half century, terminated on June 30, 1900, owing principally to the deaths of two out of three of the late partners. The surviving partner, Dudley R. Webb, in connection with William C. Edmunds, form a new firm under the same style, and will carry the usual well assorted stock of builders' and miscellaneous Hardware, including cutlery, ammunition, guns, nails, barb and other wires, shovels, forks, etc. Mr. Webb served in an uninterrupted connection with the old firm for nineteen years as collector, salesman and buyer, and Mr. Edmunds for twenty-one years as traveling salesman. They purpose pursuing a progressive policy, giving careful attention to the detail of the business, and guaranteeing prompt delivery of all orders intrusted to their care, with immediate delivery where possible. Of course their highest ambition is to secure the valued patronage of all who have dealt with the old house, giving them the assurance of the same courteous treatment for which the firm has been noted in the past. Mr. Webb, while entering into a co-partnership with Mr. Edmunds, will also give his attention to the liquidation of the old firm's business, will collect all outstanding accounts and settle all claims against said firm.

Ives Window Stop Adjusters.

The Tapling Mfg. Co., Forestville, Conn., having sold the entire business of their "Perfection" Window Stop Adjuster to the Hobart B. Ives Co., New Haven, Conn., the latter concern make the following announcement:

To the Hardware Trade: Having purchased of the Taplin Mfg. Co., Forestville, Conn., their letters patents, stock, tools, and entire interest in Taplin's Perfection Window Stop Adjuster business, wish to announce that we will continue the manufacture of the same, carrying all numbers in stock heretofore made by them.

Soliciting orders from the trade for same, we remain,
Yours truly, HOBART B. IVES CO.

New Haven, Conn., June 19, 1900.

This enables the Hobart B. Ives Co. to control entirely the window stop adjuster business in its latest and most improved form, and will, no doubt, be an incentive to this progressive concern to continue their aggressive campaign through the Hardware trade for the general sale of this admirable article, which should be handled by every Hardware dealer in the United States.

National Association of Credit Men.

To the Press: Information has been placed before this office to the effect that dunning circulars are being sent to merchants throughout the country by a concern calling itself "The National Credit Men's Association," and the similarity between this name and the title of the "National Association of Credit Men" has caused some of the recipients of these circulars to believe that the latter came from us.

We therefore desire to make it known, as emphatically as possible, that the "National Association of Credit Men" is not a Collection Agency, and conducts no Collection Department, and that we do not know of, and have absolutely no connection with the concern (whose circular does not contain any specified address, but bears upon it the names of thirty-three (33) cities) calling itself "The National Credit Men's Association." Very truly yours,

NATIONAL ASSOCIATION OF CREDIT MEN,
WM. A. PRENDERGAST, Secretary.

Machinery Exhibit for Moscow.

That Germany is on the alert for business was never more clearly shown than in the news relating to the prospective exhibit of American agricultural machinery in Russia. After the Paris Exposition the American makers are to ship some of their goods to Moscow. The intention has started the Germans upon a like enterprise. The Imperial Government is not without interest in the affair. The meeting of German manufacturers who are to exhibit was held at the Ministry of the Interior. Perhaps when it is understood in this country just what that implies the American firms which are to send goods to Moscow may succeed in obtaining a little assistance from Washington.

"Yes," said the disagreeable man, "you used to make lots of fun of Peffer's whiskers and Simpson's socklessness, but——"

"But what?"

"But can you tell me the names of their successors in Congress?"—*Chicago Times-Herald.*

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—A and B formed a partnership to purchase a business, which cost $250. A paid $125. B paid nothing. Business did not pay, B dropped out, A giving B a mortgage for horse, wagon, etc. A also failed. B borrowed horse and drove it so hard that it was crippled and had to be shot. B also sold wagon and a few other things without A's knowledge or consent, and also kept cash he received for them. Kindly let me know if B did not break mortgage, and also how long does a mortgage of that kind stand good. B wants to collect what he claims is due him on mortgage. Will the Courts sustain him in this. This transaction occurred in 1877, in New York State.

REPLY.—If your mortgagee borrowed your horse upon which he held a mortgage and through his ill-treatment of the horse caused the death of the horse the mortgagee is responsible to you in damages for the loss of the horse, which damages could probably be set off against the amount of the mortgage. If this set off was not proper for technical legal reasons you would have an action against your mortgagee to recover the damages sustained by you in consequence of his wrongful act. If the mortgage became due in 1877 it would be barred by the statute of limitations, which you could plead as a defense if your mortgagee attempted to foreclose the mortgage or otherwise collect his debt. If the mortgage was not under seal the mortgage would have only six years after the mortgage became due within which to begin suit upon it. If, however, the mortgage was under seal the mortgagee would have 20 years from the time it became due in which to begin suit upon it. We would not advise you to settle this matter, as from the facts stated we are of the opinion that you have one or more defenses to the mortgage. If the mortgagee takes any action against you you should at once consult a lawyer personally and place the matter entirely in his hands.

QUESTION.—A party rents dwelling house to an unmarried woman, who vacates the premises leaving rent due and unpaid to the amount of $45.00. For the consideration of $1.00 the debtor executed and acknowledged a bill of sale, to a third party, of all her personal property, including "all moneys" then on deposit in a savings bank, not stating any particular amount. Subsequent to the execution of the bill of sale a judgment was obtained against the debtor, execution returned unsatisfied and order in supplementary proceedings served on defendant. Can the bill of sale be set aside, or is there any way to compel the defendant to pay the amount due? The defendant is working for a small salary scarcely sufficient for support. The bank had no notice of the bill of sale, and therefore the account, if any, remains in the name of defendant.

REPLY.—If the judgment creditor is fully able to show that the bill of sale in question was executed prior to the obtaining of his judgment and he cannot show any apparent intention to defraud the creditor we are of the opinion that the bill of sale could not be set aside by the judgmen creditor. If neither the judgment creditor nor the bank in which the debtor's money was deposited had notice of the bill of sale the creditor could have obtained a third party order in supplementary proceedings and could have prevented the bank from paying the money to any one except on the order of the Court. We are of the opinion that the knowledge of the creditor that a bill of sale of the money in the bank had been executed would preclude him from obtaining this order, since the bill of sale would be presumed to show a valid title to the money in the bank in the third party until it was set aside. Allowing that the money in the bank was still the property of the debtor it could not be reached if it was the earnings of the debtor for his personal services, rendered within sixty days next before the institution of the supplementary proceedings, and it appeared that those earnings are necessary for the use of a family wholly or partly supported by the labor of the debtor. (Code Civ. Pro. Sec. 2463.)

QUESTION.—I have been employed as manager for the past six years by the —— Company. I had a contract with this company at a specified salary a year, but last month something was deducted from it without any cause, so that in the year I lost about $100. On several occasions I complained to the President, and he said the matter would be made right at the expiration of the five year contract. The five years have now expired and I have ceased to work for this company, but they still owe me about $500. I am sure that the company has never been incorporated, but there is a President, Treasurer, and Secretary and several other people who seem to be interested in the business. Kindly inform me whom I should sue.

REPLY.—From your statement of the facts we are of the opinion that the company for which you have been working is a voluntary unincorporated association, although it is possible that it is in reality a partnership. If the concern is a partnership you should sue all the members composing the firm. If it is an unincorporated association the Code of Civil Procedure of New York State prescribes two methods, either of which you could pursue. First, by bringing your action against the President and Treasurer of the concern, and second, by suing all the members of the association. Before suit you should ascertain positively what the concern is.

Coal at One End, Power at the Other The Lubricant is Between.

Plain and practical remarks upon lubrication are always of interest and value to the extensive user of machinery, and ought to be of proportionate value to all users of machinery. We quote from a paper read at a railroad club, and incidentally sprinkle in some graphite as we go along.

All men are wrong about something. A few men have found out that the coal they burn at one end of their plant, and the power they get at the other depends on the oil they use between; the rest treat oil as a trifle. A few men have also found out that the addition of 10 to 15 per cent. of Dixon's Pure Flake Graphite to the oil or grease used will enable the oil or grease to do several times more work. Other men are finding this out more slowly. A few don't care a continental.

A good lubricant is a trifle as to its cost, but it is not a trifle as to consequences. Consider what a lubricant is for—to save power in machinery. If the cost of a lubricant were one hundred times more, we would use it, but we would also study it. Even then the true question would be, not what lubricant costs least, but what lubricant saves most of power and machinery? The magnitude of lost power in machinery is variable; it is always large. It may, probably, be fairly estimated that one-half the power expended in the average case, whether in mill or shop, is wasted in lost work, being consumed in overcoming the friction of surfaces. The real value of a lubricant to the user depends upon the value of power saved by its use. To the man running a one-horse thresher it may matter but little whether the bearings of the old machine are lubricated or not, although there might be an increase in the day's output and a less tired nag if they were. To the larger user of power poor and insufficient lubrication means enormous waste of power and costs for repairs. Practical experience is far superior to theory, and while it has been most thoroughly demonstrated that an oil or grease is necessary for saving power and preventing wear, it has been just as thoroughly demonstrated that Dixon's Pure Flake Graphite is the only solid lubricant that largely enhances the lubricating value of oils and greases. Furthermore, where this graphite is used a cheaper or lower grade of oil or grease can be used and the expense of lubrication reduced as well as power saved.

GRAPHITE.

"I see that a woman doctor up in Chicago says that only one woman in 1,000 is fit to bring up children."

"I'll bet she's one of the ones."

In China white is the color of mourning; in Egypt, yellow; in Turkey, violet; in Ethiopia, brown; Europe, during middle ages, white.

ITEMS OF INTEREST FROM EVERYWHERE.

The cemeteries around London cover 2000 acres and the land they occupy represents a capital of £20,000,000.

London is 12 miles broad one way and 17 the other, and every year sees about 20 miles of new streets added to it.

The fastest train in the world at present is one of the French Northern Railroad; it makes the distance of 82 miles between Paris and Amiens, without stop, in one hour and a quarter. Equal to a speed of about 45 miles an hour.

Wood pulp paper as military clothing is used by the Japanese troops. It is marvelously tough and has an appearance that might well be regarded with satisfaction for summer wear. It holds stitching uncommonly well, while its warmth is undoubted.

For the quarter ended March 31 last, the receipts of the Post Office Department were $27,371,739, against expenditures of $27,097,388, the first time since 1888 when the income of the Department has exceeded its expenditures. The excess or profit is not a considerable sum, $274,371.

The Volta School, in Naples, has 400 scholars. They provide their own tools and go through courses in electricity, chemistry, and mechanics. The pupils pay a nominal fee and the institution is assisted by the Government and by the city. It is said that it is easy to obtain employment on leaving the schools.

The report of the receipts and expenditures of the postal service for the fiscal year ending June 30 shows the total receipts to have been $102,287,458. The expenditures for the year were $107,776,704, which leaves a deficit of $5,489,246, as against $6,610,776 the deficit for the fiscal year ended June 30, 1899.

The paved streets of New York aggregate 1,720 miles, of which Brooklyn provides 548 miles and Manhattan 405 miles. There are 745 miles of macadam streets; 339 miles of granite, 238 miles of cobblestones, 230 miles of asphalt, 84 miles of trap, 45 miles of Belgian block, 19 miles of brick, 13 miles of gravel, and 0.08 miles of wood pavement.

Fuller's earth is a soft clay and it has many uses. Half a century ago it was little mined in England, and was so valuable there that exportation of it was prohibited. A new use recently discovered for Fuller's earth is that the wool manufacturers wash old wool with it as it is a great absorber of all oils and refuse matter found in raw wool. Packing houses use Fuller's earth for refining lards, oleomargarines, butterines, and cottolenes. These commodities cannot be made without the use of Fuller's earth.

A New York daily paper gives its views of what will happen to coal and wood for domestic use in the twentieth century: "It now looks as though coal and wood are destined to be superseded in the kitchen. The electric oven bakes bread ideally, and meats prepared by it do not require watching or basting, while broiling and frying may be done in superior style. The electric chafing dish is attachable to an ordinary light wire; the current is turned and immediately the oysters begin to stew or the eggs to frizzle. In the electric kitchen of the twentieth century there will be no more coal, no ashes, no smoke, no fuel, and not even a battery. The irons used for the family linen will be heated by electricity."

The fiscal year ending June 30 has been a most prosperous one for the Patent Office, the cash receipts having been $1,358,228, a larger sum than received in any previous fiscal year. The number of patents issued is also the largest in the history of the office, numbering 26,540. There has been a corresponding increase in the number of trade marks, prints, and labels registered. The increase in the number of applications for letters patent and caveats and registration of trade marks, labels and prints is 5000 over that of the previous fiscal year, and aggregates 47,000.

The figures given of the loss by fires in the United States and Canada during the half year ended June 30, 1900 are startling in the enormous increase shown over former periods. The aggregate loss for the six months is placed at $103,298,900, being an average of over $17,200,000 for each month. The loss for the first half of last year—$65,699,750—was regarded as unusually heavy, while that of the first six months of 1898—$58,237,100—was considerably above the average; but the present year's record shows a tremendous excess over these figures, and indicates a disastrous season for the insurance companies.

A recent United States Consular Report shows that the importations of India Rubber into England for 1898 amounted to 20,026 tons about half of this being Brazilian. New fine Para Rubber was quoted at New York from 66 cents to 69 cents per pound in 1893, 69 cents to 71 cents per pound in 1894, 73 cents to 77 cents in 1895, 74 cents to 88 cents in 1896, 80 cents to 87 cents in 1897, and 82 cents to 83 cents January 1, 1898. A single cargo of rubber, consisting of 1,167 tons, shipped from Para February 23, 1898, was valued at $2,210,000 in United States gold. The exports of rubber from Brazil in 1898 amounted to $38,400,000 gold.

Striking evidence of the remarkable activity which has prevailed in the retail trade during the past 12 months is furnished by the annual statement of Director Roberts of the United States Mint for the fiscal year ended June 30, 1900. The report shows an extraordinary increase in the executions of minor coinage over the figures of any former year. There were 32,559,400 more pennies coined in 1900 than in 1899, 19,210,260 more nickels, 3,730,275 more dimes, 3,634,860 more quarters, and 4,256,408 more half dollars. The net increase in the number of silver coins executed in the past 12 months was 11,607,143 pieces, or $3,390,521 in their value.

The phonograph has long ago ceased to be merely a scientific toy, and has made for itself a large field of usefulness in several departments of commercial life. Recently, however it has been proposed to employ the phonograph as an aid in learning foreign languages, and in this department it will probably prove of more signal advantage than in any field where it has as yet been employed. In learning a foreign language it is necessary first of all to have the ear trained to catch and recognize the sounds, and the only way to accomplish this is to listen to the continual repetition of the sounds until the ear becomes familiar with them. Many persons have to learn a foreign language without any aid from a teacher who can speak that language correctly, and even those that are so fortunate as to have a competent teacher cannot constantly have the teacher at hand. Now it is proposed to have phonographic records of language lessons; then the student can have the machine repeat the lesson over and over again, until he is perfectly familiar with it.

THE PAN AMERICAN EXPOSITION, 1901.

THE AGRICULTURAL BUILDING.

A HANDSOME STRUCTURE DEVOTED TO THE INTERESTS OF THE FARM AND PLANTATION.

The agricultural industry will have a fitting setting at the Pan-American Exposition at Buffalo during the Summer of 1901. A commodious and richly proportioned building will be devoted exclusively to the interests of the farm. So wonderful has been the development of agriculture and so marvelously has the productivity of soils been increased by the application of scientific methods it is no exaggeration to say that, potentionally the cultivated acreage of the world has been doubled within a few years. Science has indeed made two blades of grass to grow where but one grew before. More than that, it has, by irrigation, made the deserts to blossom as the rose.

The Agricultural Building will stand opposite the Manufactures and Liberal Arts Building on the north side of the Mall, its longest facades looking to the north and south.

NO. 1 THE AGRICULTURAL BUILDING, PAN-AMERICAN EXPOSITION, 1901

NO. 2. NEW YORK STATE BUILDING, PAN-AMERICAN EXPOSITION, 1901.

On the east will be the Live Stock Exhibit, to which about ten acres are devoted. Northward will be the Stadium, covering another ten acres. On the west is the Grand Court with the Electric Tower, 348 feet high, and the Electricity Building just beyond. There are four broad entrances to the building. Opposite the northern entrance is an artistic bridge crossing the Grand Canal. Vaulted loggias connect the east and west entrance with the main entrance on the

Digitized by Google

south, and from these elevated promenades the people may view the throng of sightseers upon the Mall. The low, tiled roof overhangs the walls eight feet, making a deep shadow over the richly decorated cornice. The east and west entrances are treated with lattice work to imitate an arbor. The lattice is fastened to the dome, ceiling and walls, then, on a background of blue, grapevines produce the effect of looking through to the open air. The southern entrance, which is 30 feet wide, is flanked on both sides by large groups of statuary. Above the doors and following the lines of the arch, panels will be painted to represent the signs of the zodiac. On either side of the vestibule are large niches affording places of rest and retreat from the crowds. On either side of the south entrance at the intersection of the eaves of the loggia are large consoles surmounted by figures representing the "Sower" and "Reaper." The Agricultural Building is 150 by 500 feet, and contains exposition space to the amount of about 75,000 square feet.

three times that now used by the Historical Society in the building of the Buffalo Public Library.

The dimensions of the building are 130 by 82 feet, the north front to be 20 feet less than the south. The height is 33 feet on the north and 40 feet on the south walls. The height of the basement is 12 feet, and the second floor walls reach to the roof, making the ceiling 18 feet high. In the basement are janitor's quarters and bicycle rooms (which may be entered at grade from Elmwood Avenue), boiler and coal rooms, storage rooms, etc. A dining room containing 1,906 square feet faces the park to the south and opens on the north. On the ground floor is also one of the museum rooms, which communicates with the floor above by a grand staircase. Over 10,000 square feet of floor space is provided for museum purposes. There is also an assembly hall with seats for 300 persons, and a library 37 by 52 1-2 feet. Offices, cloak and other rooms make the total floor area 31803 feet. Fire-proof materials will be used throughout in the construc-

NO. 8. THE ALBRIGHT ART GALLERY, PAN-AMERICAN EXPOSITION, 1901.

NEW YORK STATE BUILDING.

TO BE A PERMANENT EDIFICE FOR THE BUFFALO HISTORICAL SOCIETY'S USES.

The New York State Building at the Pan-American Exposition is to be an edifice of substantial and enduring character. The architect is George Cary, of Buffalo. He has chosen for his guidance in the work a Greek temple of the Doric order, adapting his plans to the purposes for which the building is intended. The site chosen is on high ground near Elmwood Avenue, overlooking the North Bay of the lake in Delaware Park and near the principal entrance to the Exposition grounds by street cars. The location is not only thus convenient to the electric cars, but one that is fortunate and beautiful as well from every standpoint, so that the building will add to the beauty of this popular pleasure ground. Immediately in front and across the park bay the Albright Art Gallery will stand as a companion piece in the park picture. The building will be used during the Exposition as New York State headquarters, and will contain certain of the State exhibits.

After the Exposition it will become the permanent home of the Buffalo Historical Society, whose large collection of pioneer relics will be placed therein. The floor area will be

tion of the building. The exterior will be stone. There will be no wood except the mahogany doors on the first and second floors and birch in the basement. All the door casings, inside column covering and cornices, are of plaster. All bases are marble and cement. The floors are marble, concrete, granite and wood blocks laid in asphalt. The stairways are of marble and iron. The view of the bay and lake and of the park, which will be seen from the broad columinated portico on the south side of the building, will be of the most beautiful character.

BUFFALO'S ART PALACE.

MR. J. J. ALBRIGHT GIVES $350,000 TO ERECT A PERMANENT ART BUILDING WHICH PAN-AMERICAN VISITORS MAY ENJOY.

The city of Buffalo is soon to have one of the most beautiful buildings in the western world, a public art gallery, to cost upward of $350,000. The building is the gift of J. J. Albright, a citizen of Buffalo and a liberal patron of art, who desires to bestow upon his city a structure that will forever yield immeasurable pleasure to those who visit it, and become, as well, a centre of culture and art. The only conditions imposed by the public-spirited donor were that the city of Buffalo should furnish a site, and that the Fine Arts Academy of Buffalo, which is made the custodian of the property.

Digitized by Google

should raise a maintenance fund of $100,000. The city promptly deeded the site requested, which is just within the limits of Delaware Park, overlooking the beautiful park lake. The Fine Arts Academy has complied with the terms of the gift, as they applied to the maintenance fund, and the building will be hurried to completion as rapidly as conditions will permit. The building will be used as the art palace of the Pan-American Exposition, and thereafter become the permanent home of Buffalo's art collections.

This magnificent edifice will be 250 feet long by 150 feet wide, the principal facade looking toward the east. The building will stand upon a broad terrace 35 feet above the level of the park lake, which lies but a few rods below and to the eastward. The principal approach will be by a beautiful monumental flight of steps, the contour of the ground giving opportunity for stately embellishment. The terrace walls are to be of heavy granite blocks. Statuary, fountains, formal floral displays and lawns will complete the ornamentation of the terrace.

The style of architecture chosen is the classic Greek, both the eastern and western facades showing rows of rich, graceful columns. The style is Ionic. A semi-circular colonnade forms the central figure of the west or Elmwood Avenue front. The building has broad wings at the extreme northern and southern ends, terminated by porches, which will be reproductions of famous architectural works of ancient Greece. The highest peak is only 45 feet above ground. The Erechtheum of Athens has been a prolific source of inspiration for the architects, Messrs. Green & Wicks, of Buffalo. The portico of the Erechtheum, famous for its caryatides, will be one of the works to be thus reproduced. The Erechtheum was an ancient temple, and is one of the most interesting of the ruins of the Acropolis at Athens. It was rebuilt after the Persian invasion, about 400 B. C.

Entering the building by way of the main approach one comes first to the hall of statuary, in the middle of the building, which is 71 by 100 feet. Directly west of this is the Hemicycle, a large semi-circular room with tiers of seats and a rostrum, where lectures may be given before audiences of several hundred people. North of Statuary Hall will be a gallery 35 by 58 feet. On either side of the corridor leading to this gallery are library and board rooms. Beyond, in the extreme north wing, will be seven studio rooms, connected by a long corridor. In the western part of the building are two ante-rooms and four large galleries. In the large light basement will be numerous other rooms for all sorts of uses in connection with the proper management of the building, such as bicycle and cloak rooms, lavatories, janitor's quarters, electric lighting and heating, packing and storage. The building will be strictly fireproof, the materials being white marble, steel beams, brick, cement and stone. The structure will require 25,000 cubic feet of marble. All materials will be of the best, so that an enduring edifice may remain when present generations shall have vanished.

General Benefits of a Bankrupt Law.

A national bankruptcy system is indispensable to prevent the unjust discrimination which is permitted by some local laws against citizens of other States. In Illinois and some other States the law protects resident creditors in their attempts to reach property or funds of a non-resident debtor even after the making of an assignment for the equal benefit of all creditors valid in the State where it is made. Such legislation can find no justification, except on the theory of reciprocal devastation. State lines are obliterated for the purposes of trade—why should they be retained for the purpose of the inequitable enforcement of the law in cases of commercial failure?

In the absence of a bankrupt law, trade is hampered, not only by discriminating laws, but by the conflict of numerous and inconsistent State laws, acquaintance with which is troublesome and expensive, and which can be availed of only by the keenest activity and perpetual legal warfare, and even then permitted preferences will in some States defeat the most vigilant.

The fathers realized the necessity for the concession to the Federal Government of authority over this subject in order to avoid the many wrongs and abuses which have sprung up and flourished in the absence of the exercise by Congress of the power conferred. Madison said in the *Federalist:* "The power of establishing uniform laws of bankruptcy is so intimately connected with the regulation of commerce and will prevent so many frauds when the parties or their property may lie or be removed into different States that the expediency seems not likely to be drawn in question."

A bankrupt law is needed for the repression of fraudulent and dishonest business methods. There is nothing which operates so powerfully upon designing rogues as the certainty of prompt and exhaustive investigation. This the bankrupt law affords as no other system does or can.

A bankrupt law diminishes losses. It prevents the waste occasioned by the scramble of creditors to realize each for himself. Great concerns who are able to support law departments and who are perpetually on the watch to rush in upon the first alarm and secure themselves at all hazards, may believe that they are benefited by the rough and tumble of legal conflicts, but even they in the long run fare in fact better when the property of a debtor is protected for the common benefit. The ordinary merchant who is without an army of attorneys is ill prepared for war and finds his safest protection in the shelter of the bankrupt law.

From an address delivered by James L. Bishop, of New York, before the Department of Law, of the Brooklyn Institute of Arts and Sciences.

American Invention Lowers Cost of Production.

"The Patent Office is more than self-sustaining," says Secretary of the Interior Hitchcock in his annual report. "As American inventive genius has cheapened the cost of production, to the advantage of American wages, it would seem as though the legislative branch of the Government should do much to encourage the useful arts and the inventors of the country. At the present time our manufacturers are reaching out for foreign markets, and no greater aid can be given them than by fostering and stimulating invention to become dominant in the markets of the world through labor-saving inventions which will enable it to compete with the lower wages paid to the so-called working classes in other countries. The greatest development in American exports must be in the direction of increase in the export of manufactures."

The commissioner asserts that we mainly owe to our patent system such foothold as we have gained during the past fifty years in foreign lands for our manufactured products; that we can by a fair and liberal treatment of our inventors, control for our manufacturers not only our home markets, but the markets of the world. "Most labor-saving machinery perfected within the last seventy-five years is the invention of our own people. It is not alone by fundamental inventions that our inventors have revolutionized in so many respects the manufacturing industry. None the less have their inventions in automatic devices, in expediting processes and in many steps dispensing with hard labor, assisted in placing this country in the front rank in art. American electrical appliances command the world's markets. Let it not be forgotten that it is the American inventors who, by their inventions and discoveries, 'have made the last fifty years of the nineteenth century the most remarkable of recorded time,' and, at the same time, have laid the civilized world under tribute to American manufactures."

Minister—Now, little girl, you want to be a Christian, don't you?

Ethel—No, sir; I'd rather sing in the choir.

A New Creation in Arrangement of Builders' Hardware.

The accompanying illustration shows twenty-five feet of Warren Cabinet Shelving as it appears in part in the Builders' Hardware Department of The Gray & Dudley Hardware Co.'s new store, just completed at Nashville, Tenn.

That the intricate problem of house "trims" in different designs and various finishes of Builders' Hardware can be arranged in a cabinet, enabling the salesman to sell as conveniently to the purchaser, as are various sizes of shot to the sportsman, from the ordinary shot case, is what the originator and manufacturer of the cabinets illustrated believes this new system will accomplish, of equal relief to the expert salesman and buyer alike.

It forms a new and pleasing solution of a better and more practical way that will awaken alike the interest of lock manufacturers, jobbers and retail merchants, in a correct presentation of Builders' Hardware; securing its arrangement in a manner so that its richness is further enhanced and its attractive patterns and various tints of finish become better known to the public, which this method permits, as it at once attracts the attention of any passer by, whether such an one may or may not be interested in the goods.

They quickly see the beauty and harmony that modern artists in their skillfully designed patterns bring to the residence for its adornment, arousing a response of appreciation that heretofore has been denied through failure of the merchant in displaying the goods well.

When arranged as illustrated, the display becomes at once a public instructor, so forcible in its magnetism that the common, cheap article is forgotten, as the finer and richer pattern standing by the cheap one draws attention to itself. This form of display renders to the public information they wish, of which the merchant or salesman is unaware, as it permits one at his own leisure and convenience, without making his wants known, to see for himself the finer and better patterns, of which he at first might not think of buying, but through the charms the better have, through frequent comparisons, they of themselves elevate him to a higher grade in his choice, the result necessarily following that a much finer and more profitable grade supplants cheap goods.

Scarcely any line is more susceptible to this fact than Builders' Hardware, as through its intricate diversity of patterns and finishes, it is shunned by many salesmen, even if not by the merchant himself, until some employee gives it his special attention; to him this cabinet at once becomes a great aid in relieving him of the tedious task—both wearisome to himself and customer alike—of showing goods in the crude way they appear in original boxes, with parts missing and their correct appearance impossible to demonstrate as they would be when in use, while by this method they are seen in a few seconds in as perfect operation as they ever will be in actual use; his sales are accomplished in a tithe of the time previously required.

The inexperienced clerk who might not hesitate to sell a common japanned thumb latch, finds the most intricate lock as simply arranged, and the various parts of a "trim," which to him has had a mystifying, appalling sound, are arranged in simple, consecutive compartments, from which he can readily sell; the front door lock being in one, the inside door lock following next to it, while the astragal face sliding door lock is in the third and the plain face in a fourth compartment, with a sample of each kind as perfectly sampled on the miniature door that swings in front of each compartment as it would be in the door of a residence; thus this new form of arrangement makes the Builders' Hardware as convenient to the purchaser to select from, and as easy for the clerk to sell, as other lines of goods the merchant carries, thereby enabling the expert salesman in charge to give his time direct to the general work of the department, relieving him of the minor details.

The Cabinets shown are built in sections and rest on the base or floor sections, as shown in cut. The exterior consists entirely of light, antique oak, ornamental top moulding, with the joined ends forming as perfect alignment as if built together. The artistic effect is greatly enhanced by a superb ingrain finish, which gives each cabinet an appearance elegantly in keeping with all of its valuable technical qualities.

The division of the space in each cabinet section has been made with great care and study consistent with the science of classifying that portion of stock catalogued as Builders' Hardware. The ratio of spaces was determined through the designer's practical knowledge of the line, enabling him to decide the relative proportions of the various styles and sizes of stock. Goods having the largest demand were first taken into consideration and given the most accessible positions, nearest in reach of the salesman, the most valuable and expensive finish being placed in the upper portion of the cabinet.

Beginning with the highest and most expensive door handles at the upper left-hand corner, their relative grade, size and price follow consecutively throughout the list, other goods in different grades extending in the same manner to the end of the cabinets, so that the salesman, in serving the customer, virtually conducts him down the line until the desired articles, from the richest to the cheapest grades, at highest or lowest prices, are selected. Thus all of the various goods used in trimming throughout the finest residence or humblest cottage are arranged for immediate inspection at all times.

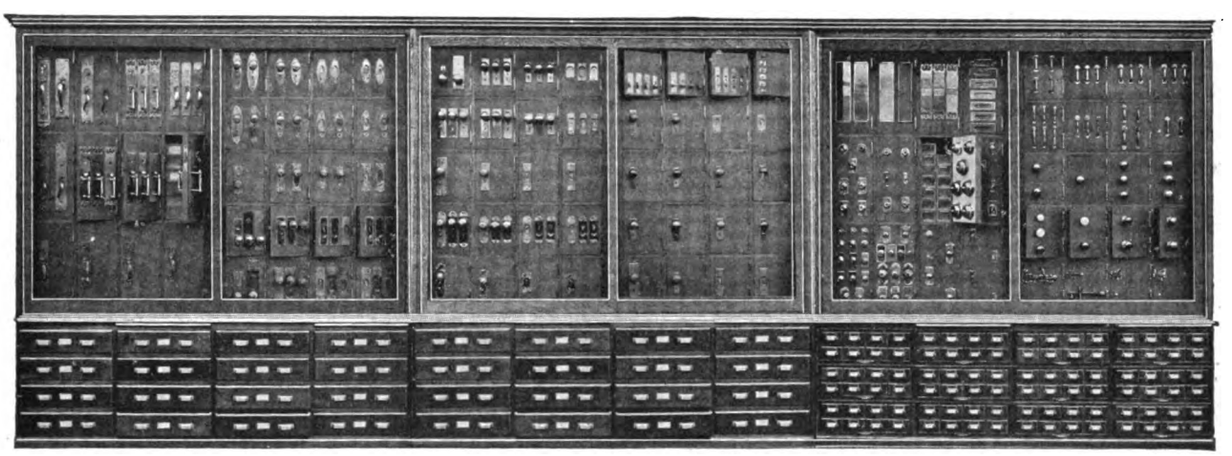

FIG. 1. WARREN'S NEW SYSTEM OF MOUNTING BUILDERS' HARDWARE. DESIGNED SPECIALLY FOR THE GRAY & DUDLEY HARDWARE COMPANY'S NEW STORE.

Minutely, the practical method applied does not fail to display the most ordinary japanned thumb latch, arranged so as to be shown in actual use, equally as well as the most intricately constructed lock. This novel result is accomplished by the introduction of the unique miniature doors, made of standard door thickness, that close each stock compartment to which are mortised into place, in their natural order, samples of the line carried by The Gray & Dudley Co. In the bottom tier of the right-hand cabinet (see cut), being the extreme opposite location of the finest patterns, are placed the least expensive door handles and latches, while in the two tiers above are nicely sampled common door knobs —jet, porcelain, bronze-plated, etc.—appearing as if on actual doors, the space being allotted in ratio of proportion of their sales.

Patterns comprising the most rapid sellers, it will be noted by reference to the cut, are given the largest space for accommodating the greatest amount of stock, the very best sellers often being assigned singly, an entire compartment, with sample on the door, while two, three or four patterns of a less salable article are arranged with division in one space, with a sample of each on the door (each space contains from one to four square feet inside); also that they are located out of the way of those styles that are in greatest demand.

The doors swing open and can be lifted off the loose joint

Digitized by Google

hinge if desired. The stock inside is ample and within easy reach of the salesman and customer. The inner side of each door is veneered with a different kind of wood, making thirty-two kinds entering into each cabinet, which enables the color of finish of goods to be contrasted with whatever material the customer desires to match.

The fronts of the Cabinets are finished with sliding glass doors, which protect the samples from becoming tarnished by dust, moisture, etc.

Aside from being rich and beautiful when assembled in the store, the woods possess great novelty of attraction for drawing people who are interested in building new residences through curiosity and desire to secure suggestions of interior wood finish, as well as to inspect the Hardware, before deciding their purchase.

The various woods are as follows:

Plain mahogany, white mahogany, Mexican mahogany, African mahogany, white birch, curly birch, plain cherry, figured cherry, tulip, sycamore, poplar, Spanish cedar, San Domingo mahogany, plain oak, curly oak, quarter sawed oak, white maple, curly maple, bird's-eye maple, plain walnut, burl walnut, curly walnut, white holly, elm, beach, sandal, magnolia, rosewood, vermilion, basswood, coco bolo, Hungarian ash and red birch.

The bases below the Cabinets described are arranged with drawers of suitable measurements with space to carry upward of one hundred "trims," of whatever kinds and styles desired, placed on boards in the usual way as displayed by lock manufacturers, to use in ordering direct from factory, thus retaining all the good features heretofore in use with the practical new ones added.

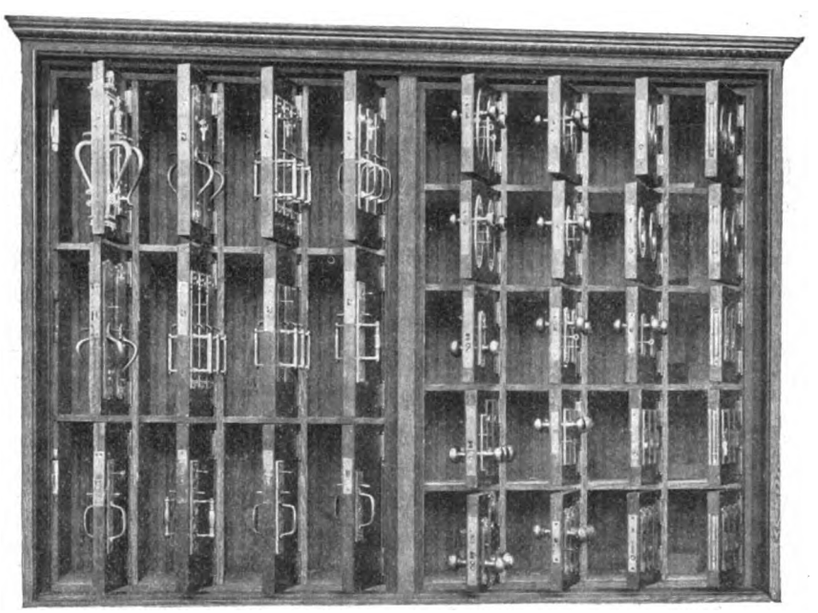

FIG. 2. VIEW OF SINGLE SECTION, WITH DOORS OPEN.

A Day Laborer's Valuable Invention.

An exchange reports that a resident of one of the suburbs of New York who had for many years been practically a day laborer has recently completed an invention that will in all probability make him a rich man. He was employed in the laborious work of scraping paint from railroad cars at the rate of 14 cents an hour, and, as may be imagined, his income was not munificent. He had had much hard luck, including the loss of one eye. His mind was all right, however, and he succeeded in making a combination of liquids that would remove the paint and leave the boards as clean and white as the day they were nailed to the frame. He kept his secret until he could save enough money to have the process patented, but no one has been able to learn the formula, as he has been particular to buy his materials in different places. The saving in using the mixture is about $30 per car. Now the railroad companies and passenger car builders are after him with cash offers to sell out, one of $25,000 having recently been made. This has taught him the money value of his discovery, and he refused the proposition. He will be able to get a greater price or control the business of producing and selling the article, so that the once poverty stricken laborer is in a fair way of having plenty of money for the remainder of his life.

American Enterprise at Paris.

Among the striking and original exhibits at the Paris Exposition of 1900 few have occasioned more favorable comment than the great map of the United States, 18x16 feet, exhibited by the well-known advertising agency of Lord & Thomas, Chicago and New York. This map is constructed to show at a glance the various details concerning State areas and population, number of publications in each, circulation per issue, percentage of circulation to population, value of publishing plants, number of employees, average hours of labor, average wages paid and average cost per inch for yearly advertising. Information of this nature is of especial value to advertisers, showing as it does the best locations in which to place advertising to reach the greatest number of people and secure best results. The firm of Lord & Thomas has been engaged in the general advertising business for over thirty years, and ranks among the largest in its line. They prepare advertisements for all classes of advertisers and place them in any publication in the world. Copies of this valuable map will be sent free on request to all advertisers who address Lord & Thomas, Trude Building, Chicago.

It has been ascertained by a series of experiments that a diamond does not cut the glass file fashion, but forces the particles apart, so that a continuous crack is formed along the line of the intended cut. The crack once begun, very small force is necessary to carry it through the glass, and thus the piece is easily broken off. The superficial crack or cut need not be deep; a cut, according to fine measurements, of a 200th part of an inch is quite sufficient to accomplish the purpose, so that the application of much force in using the diamond only wears out the gem without doing the work any better. Numerous stones, such as quartz and other minerals, when ground in proper form will cut glass like a diamond, but are not so valuable for that purpose, lacking the requisite hardness, and soon losing the sharp edge necessary to make the operation a success.

Spudds—I hear that Perkasie is already tired of his engagement to Miss Askin.

Sprocketts—It is true. He has been trying to back-pedal for quite a while.

MICHIGAN HARDWARE ASSOCIATION.

The fifth annual convention of the Michigan Hardware Association was held in the Turkish room of the Hotel Cadillac, Detroit, Wednesday, July 11th, and the succeeding day, with President H. W. Weber of West Bay City in the chair. The attendance during the first day reached upward of 100. The President, on opening the session, announced the following committees:

On Credentials.—H. C. Minnie of Eaton Rapids, John Popp of Saginaw, Frank Brackett of Battle Creek.

On Resolutions.—Charles Rounds of Yale, F. J. Scott of Marine City, J. G. Patterson of Detroit.

On Revision of the Constitution.—F. S. Carlton of Calumet, George J. Phillips of Allegan, Frank Hixson of Portland, J. B. Sperry of Port Huron, O. H. Gale of Albion, Fred H. Cozzens of Detroit.

The proceedings were commenced by the Mayor, William C. Maybury, welcoming the delegates in an appropriate address, to which the President pleasantly responded in a brief but happy manner.

President Weber then delivered his annual address, which touched upon a number of important points of interest, among which he referred to the "value of interstate association," the "collection of dues," "taxation assessments" and other subjects, on each of which he dwelt at large, suggesting and proposing work for the convention during its sessions. The President suggested the following proposed amendment to the by-laws, saying:

"Article 1 of our by-laws reads: 'Any person, firm or corporation in Michigan, engaged in the business of selling Hardware and known and recognized as a regular Hardware dealer, may become a member of this association.' This, you will notice, makes no distinction between a wholesaler and a retailer. This, it seems to me, should be changed to read: 'Any regular retail dealer may become a member,' etc. Doing this will remove quite an obstacle to the increase of our membership."

The recommendations of the address were referred to the Committee on Revision of the Constitution for further action.

The Secretary-Treasurer, Fred H. Cozzens, then made his statistical and fiscal report, which was of a very congratulatory character, showing that the net paid-up membership at beginning of coming year was 139, while the net gain during the year brought the total to date up to 280. The Secretary's report was an extremely interesting one, giving a good idea of the amount of work entailed upon the position in order to achieve the degree of success it is his natural ambition to attain.

Irving A. Sibley, of Indiana, addressed the convention by enlarging upon the many advantages to be derived from affiliation with the Interstate Association, which was listened to attentively and created a favorable impression.

The Committee on Revision of the Constitution labored effectively with the object in view of doing justice to the question, and succeeded in a thorough revision of the constitution, their work being accepted by the convention with but a few slight changes. By the new instrument, the membership is limited strictly to retail dealers, and changes the name of the association to correspond therewith. The preamble adopted is as follows:

The Michigan Retail Hardware Dealers' Association is an organization intending to include in its membership all legitimate dealers in Hardware in the State of Michigan who conduct their business in a manner not prejudicial to the general welfare of the Hardware trade; all membership being subject to the approval of the Executive Committee before final acceptance. The trade has long recognized the necessity for co-operative work in protection against trade abuses. It is the purpose of the Michigan Retail Hardware Dealers' Association to furnish such protection as far as is possible. As such protection is only obtainable through the medium of a large and interested membership, we earnestly invite the attention of all dealers who are not members to the end that they may see the necessity of joining their influence to ours in this work.

The new constitution still further declares that

By subscribing to the constitution and by-laws the person, firm or corporation thereby agrees and is pledged to conduct his business in accordance with the same. He also agrees to carry out explicitly all requests of the Executive Committee, especially in matters relating to the violation of the constitution and by-laws by jobbers and manufacturers, or resolutions adopted at a regular meeting of the association.

The annual dues under the new constitution are raised from three to four dollars. This is done with a view of enabling the Michigan body to join the Interstate Association, it having been explained by Mr. Sibley, in response to the question being raised, that "the only thing necessary to become members of the Interstate Association is the payment of one dollar per capita for your association, accompanied with an application for membership." Provision was also made for the more rigid collection of dues than had been customary previously. The new constitution also requires that the Executive Committee shall meet at fixed periods. The first week in November, February and May is relied upon to keep them in closer touch with the association's affairs, the time of the annual meeting being changed to the second Wednesday in August.

The following stirring resolutions were then adopted by the convention:

RESOLUTIONS.

Whereas, Some manufacturers and wholesale dealers in general Hardware, Stoves, Tinware and kindred lines persist in selling their lines through illegitimate channels, to our injury and detriment, placing us toward our customers in the light of extortioners, causing endless trouble; and,

Whereas, The system of protecting us from this wrong is ineffective, it is absolutely necessary to perfect such a system of united action which will remove these evils from which we have suffered for years. Therefore be it

Resolved, That the members of this association confine the purchase of Hardware, Stoves, Tinware and kindred lines, as far as practicable, to manufacturers and wholesale dealers who sell goods to firms that are regularly engaged in the retail Hardware business as defined in these resolutions.

Resolved, That it is the sense of this association that the interpretation of the term "retail Hardware dealer," as set forth in the above resolution, to entitle him to purchase Hardware, Tinware and kindred lines, be construed to mean any person having an established place of business and carrying a line of Hardware, Stoves, Tinware and such goods as are usually kept in a first-class Hardware store; excepting that in places where there are no regular Hardware stores, general stores, who do not use the line in a way that demoralizes the trade, and any other store not objectionable to the regular dealers in such territory, shall be construed as legitimate.

Resolved, That it is not the intention of the above resolutions to prevent the interchange of goods mentioned between manufacturers and wholesale dealers in such goods, or for export trade; and that the further interpretation of these resolutions is hereby vested in the Executive Committee, with power. The following are exempt from these resolutions: The United States Government, railroads and such manufacturing industries and companies as the Executive Committee may approve for such goods as are necessary for their respective lines of business.

Resolved, That any manufacturer or jobber in Hardware, Stoves, Tinware and kindred goods, furnishing net prices or any discount from list prices, contrary to the foregoing reso-

Digitized by Google

lutions, either by themselves, employees or agents, shall be considered as disapproving the above resolutions.

Resolved, That this association shall, as far as it lies in its power, keep a record of all goods sold, and by whom sold, through illegitimate channels, and of all other violations of these resolutions.

Resolved, That every member of this association is constituted a committee of one, and is expected to report to the proper officers any violation of these resolutions.

Resolved, That it is the sense of this association that bids direct to customers or contractors by jobbers or manufacturers, upon any kind of finishing or rough Hardware entering into the construction of buildings, are injurious to the retail trade, and that all such bids should be made by or through a regular Hardware dealer.

Resolved, That all meetings of the association should be closed meetings, and that the published reports of the proceedings of the same should be under the supervision of a Press Committee.

Resolved, That these measures are just and necessary for our welfare, and it is expected that their rigid enforcement will be observed.

Resolved, That this convention indorses the above, and urges its officers to use their best efforts to bring about the further formation of State association, so as to insure a greater national association, with the end in view that a uniform system of protection for the trade will prevail throughout the country.

Resolved, That the Executive Committee be, and hereby is, instructed to have prepared a list of manufacturers and jobbers who are, and who are not, in sympathy with the efforts of our organization, and that the same be sent to our list of members, who will be expected to be guided thereby in the matter of purchases thereafter.

A paper was read by F. S. Carlton, of Calumet, upon "The Relations Between Jobbers, Retailers and Consumers," which treated the subject in an extremely interesting way, and was thoroughly enjoyed by his auditors.

THURSDAY'S SESSION.

The second day's proceedings were opened by the reading of a paper by C. W. Caspar, of Marshall, on "Catalogue House Competition, and How to Meet It," which excited considerable discussion, and proved a fertile subject for convention work.

President Weber at a previous time in the convention having referred in a highly laudatory manner to the perfect organization of the Minnesota Retail Hardware Dealers' Association, an important paper was read by E. H. Loyhed, of Faribault, Minn., upon the workings of the Minnesota Retail Hardware Dealers' Association, the manner and quality of its work, and the methods adopted to control trade abuses. This was a deservedly interesting paper, and was listened to attentively.

E. Marks, Vice-President of the Mercantile Association of Michigan, and also Vice-President of the Detroit Retail Grocers' Protective Association, presented a paper on "Better Laws for Business Men, and What Is Being Done to Secure Them," which proved of considerable interest.

ELECTION OF OFFICERS.

The election of officers under the new constitution resulted as follows:

President, George W. Hubbard of Flint.

Vice-President, H. C. Minnie of Eaton Rapids.

Secretary, Fred. H. Cozzens of Detroit.

Treasurer, Henry C. Weber of Detroit.

Executive Committee, for one year: C. E. Pipp, Otsego; A. J. Scott, Marine City; J. B. Sperry, Port Huron; A. Harshaw, Delray; G. B. M. Towner, Muskegon. For two years: James J. Potter, Alpena; John W. Jochim, Ishpeming; Robert G. Chandler, Coldwater; John Popp, Saginaw; F. S. Carlton, Calumet.

On Wednesday evening, through the courtesy of the Detroit jobbers, the large ferryboat *Pastime* was secured for the purpose of giving the delegates and their friends, which numbered on this occasion about 350 passengers, a moonlight excursion. A distance of three or four miles above and below the city was covered on the Detroit River. At the same time an enjoyable entertainment was given on the upper deck. An orchestra furnished instrumental music, and the Clipper Quartette rendered a number of popular airs, which, with several features of a vaudeville character, were given by local talent. Refreshments were provided, and dancing completed the festivities of the occasion, which concluded about midnight.

Greatly Increased Foreign Commerce.

The total foreign commerce of the United States during the fiscal year 1900 exceeds by 16 2-3 per cent. that of any preceding year, being 320 million dollars greater than that of 1899, the heaviest one on record preceding the one which has just ended. The total commerce of the year, as shown by the figures of the Treasury Bureau of Statistics, is $2,244,193,543. The exports are $1,394,479,214, or 163 million dollars in excess of those of 1898, which held the record of the largest exports until the record of 1900 was made. All of the great classes show an increase in exportation: Fisheries a million dollars; mining and forestry, nearly 10 million dollars each; agriculture, nearly 50 million dollars, and manufactures nearly 100 million dollars over the phenomenal year 1899.

Imports are also heavy, especially in the class designated as "articles in a crude condition which enter into the various processes of domestic industry." Of the five great classes of imports, articles in a crude condition for use in manufacturing show by far the largest growth. Manufactures show a gain of about 20 million dollars over last year; articles of voluntary use, luxuries, etc., also about 20 millions; articles of food, about 15 millions; articles wholly or partially manufactured for use in manufacturing, 25 millions and articles in a crude condition which enter into the various processes of domestic industry, over 75 million dollars.

The most notable feature of the year's commerce are: 1st. The increase in imports of manufacturers' materials not produced at home. 2nd. The increase in exports of manufactured articles. 3rd. The fact that the foreign commerce for the first time in the fiscal year record crossed the two billion dollar line. Imports of manufacturers' materials form, in fact, nearly one-half the total importations if we consider as manufacturers' materials the class "articles wholly or partially manufactured for use as materials in the manufactures and mechanic arts." They alone amount to about 90 million dollars, while "articles in a crude condition which enter into the various processes of domestic industry" amount to over 300 million dollars. Thus the manufacturers' materials imported during the year amount to about 400 million dollars out of a total of 849 million dollars. In 1890 manufacturers' materials, including both classes—articles in a crude condition, and articles wholly or partially manufactured for use in manufacturing—formed 33 per cent. of the imports; in 1895 they formed 37 per cent.; in 1896, 37 per cent; in 1898, 42 per cent; in 1899, 41 per cent., and in 1900, 46 per cent. Taking raw materials alone, the group classified as "articles in a crude condition which enter into the various processes of domestic industry," the per cent. which they formed of the total importation was, in 1885, 20.64; in 1890, 23.06; in 1895, 25.64; in 1896, 24.57; in 1897, 26.00; in 1898, 32.16; in 1899, 31.82, and in 1900, 35.75. To put it in a single sentence, the imports of the year increased 152 million dollars, of which increase two-thirds was in manufacturers' materials, and the exports increased 167 million dollars, of which increase one-half was manufactured articles.

Boy in Butcher's Shop—My mither sent me back to let ye see what a big bane there was in the pund o' beef she bocht last night, and she wants anither pund without banes.

Butcher—Tell yer mither the next time I kill a coo without banes, I'll send her a leg for naething.—Ex.

RECENT TRADE PUBLICATIONS.

THOMAS SLAIGHT, 113-115 N. J. R. R. Avenue, Newark, N. J. Envelope catalogue of 20 pages, illustrating and giving prices of the Slaight patent padlocks so long and favorably known among the productions of Newark. Included in its contents is a line of passenger car locks, made by this concern for a number of years, together with special extra heavy brass knobs suitable for railroads.

HOLROYD & Co., Waterford, N. Y. Catalogue of stocks and dies for machinists, blacksmiths, bicycle repairers and steam fitters, together with taps, dies and threading tools, and round adjustable die plates, of all the possible descriptions sold by the Hardware trade. It is a pamphlet catalogue of 50 pages, well printed on good paper, and handsomely illustrated, the wood cuts being exceedingly good. List prices upon these goods are subject to various discounts.

BARNES & NUSS Co., Grand Forks, N. D. Illustrated catalogue and price list of galvanized iron cornices, skylights, finials, ornamental ridgings, ridge rolls, roof gutters, eave trough, conductor pipe, etc. Pamphlet catalogue of 30 pages illustrating the above goods in a very complete manner, showing the styles and giving the dimensions of the very extensive product made by this company. Prices acompany every design. Trade discounts can be obtained by correspondence with the manufacturers. They state they are also prepared to furnish estimates from special designs or drawings at any time, and solicit correspondence regarding the same.

THE NATIONAL SPECIALTY MFG. CO., 116-122 Wyman Street, Rockford, Ill. Small size catalogue of 20 pages, illustrating and describing the National Incandescent Gasoline Lamp, which is shown in the various styles made by this company, each one of which is illustrated and fully described, presenting the appearance of being a very desirable and salable line of goods, worthy of being entertained by the Hardware trade. Full price list accompanies the same, and discounts will be given by the manufacturers upon application.

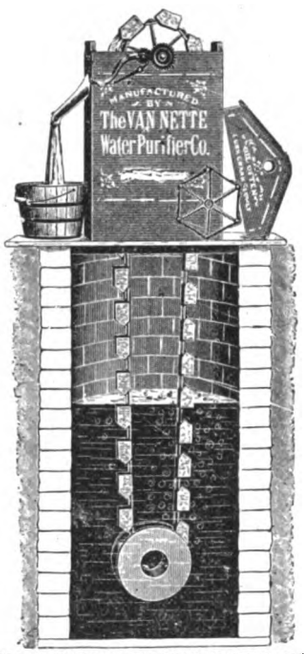
THE DICKE TOOL CO., Downers Grove, Ill., J. E. Way, Eastern Manager, 39 Cortlandt Street, New York. Small size catalogue of 50 pages covering an entire line of construction tools and Hardware specialties required by the electric lineman, and embracing a large assortment of such goods as splicing clamps, climbers, shovels and spoons, crow, digging and tamping bars, post hole augers and diggers, cant and carrying hooks, combination pay-out reels, linemen's carts and stages, lag screw wrenches, and splicing tools, pulley blocks, etc. One of the most complete varieties of such goods from one maker that has been brought to our attention.

THE SCHNEIDER & TRENKAMP CO., Cleveland, O. Booklet of 12 pages giving a full description of and referring to all the special features connected with their lines of Reliable Water Heaters. These are instantaneous water heaters of the pressure principle, making it possible to use spray attachment in connection with bath, which is a feature worthy of consideration. In this heater the water being heated does not come in contact with poisonous gases from burner, hence is perfectly pure and palatable for drinking purposes, which is a strong point in its favor. It can be furnished either round or square, with either floor stand or side wall bracket. This little booklet gives all the necessary information in connection with the various styles made, and is worth sending for by those interested in this line of goods.

E. W. BLISS Co., Brooklyn, N. Y. 16 page catalogue of Bliss-Heath patent vacuum or atmospheric pumping engines for unskilled labor. This is a small catalogue, envelope size, printed on coated paper, and as usual with this company, handsomely illustrated with a full description of its merits, mode of operation, and other points of interest. The E. W. Bliss Co. are also the largest designers and builders of presses, dies, shears, drop hammers, double seamers and every description of special machinery for all kinds of sheet metal work, for which they solicit correspondence, and cheerfully furnish estimates.

THE BUHL STAMPING CO., Detroit, Mich. Booklet of 32 pages, being their booklet No. 33, and having a special title, together with special features connected with the title, called "From Mexico to the Top of the Earth." This is a booklet gotten up in their usual high-grade style, printed on coated paper, and illustrated throughout with their various designs of milk cans, etc., all of which are shown in a very novel manner as part and parcel of endorsements of the manufactures of this well known company, the typewritten letters forming these endorsements being shown in fac simile. In the corner of each is a different design, illustrating the various milk cans referred to. It is a very clever piece of work, and reflects credit upon the compiler.

R. K. BACHMAN & BROTHER, Riegelsville, Pa. Allerton-Clarke Co., 79 Reade Street, New York, Agents. A booklet catalogue of the adjustable window screens made by this firm under the name of "Our Automatic" and "Century." They also make a centre extension screen to comply with the demand for a low-priced screen. "Our Automatic" is made with an end pin and spiral springs, which give to it a rigidity not usually found in automatic screens. The spiral springs are so constructed that they cannot get out of position, and will not stick, catch or wedge fast in operating. The "Century" is made of hard wood, finished in oil, side wings and frame beaded, and selvage of wire cloth covered with moulding; list prices lower than "Our Automatic." The centre extension screen is a well made screen of stained cherry or walnut, slides on steel rods, and will not bind; both sides alike. It is made to admit of the greatest possible extension for each size. Although a light frame, it has stiff corner joints, and makes a strong and durable screen of this character.



ATLAS BOLT & SCREW Co., Cleveland, Ohio. Catalogue and price list of tire bolts, sleigh shoe bolts, stove bolts, iron and brass machine screws, sink bolts, rivets and stove rods; 24 page catalogue printed on fine coated paper, with excellent illustrations showing every portion of their product in a manner readily understood. All the variations are shown, as, for instance, on one page of rivets there are thirteen different patterns, including such goods as Globe head rivets, wagon box head and wheel head rivets, caster and pinch head pins, showing special designs that are rarely illustrated, and consequently making catalogue of considerable utility to the dealer. On the page showing bolts are thirteen illustrations, showing the various designs of these goods, including such patterns as bung head and desk bolts, pinch head and seat post bolts, steeple head and countersunk bolts, odd patterns that are rarely illustrated. The various styles of screws made by this concern are similarly treated. Altogether this is an important little catalogue for the Hardware dealer who desires to be up to date on his information, and is well worth writing for.

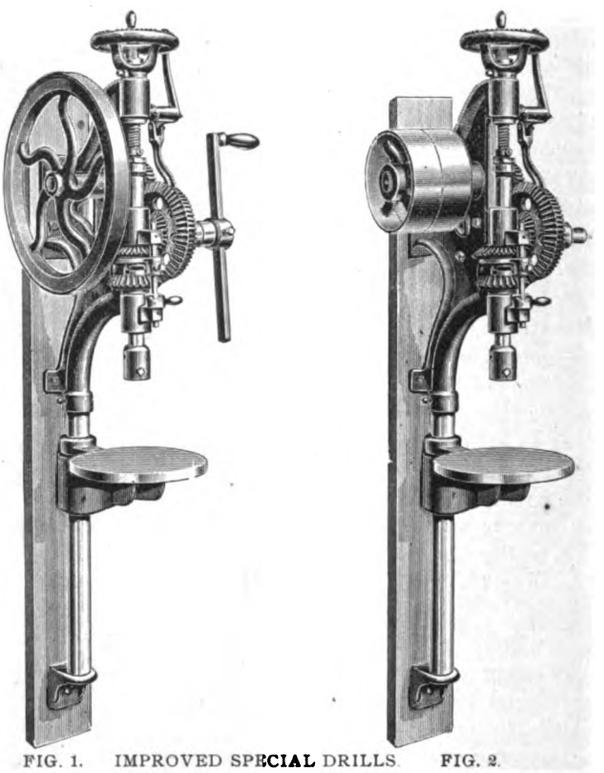
NEW GOODS AND SPECIALTIES.

Van Nette Water Purifier.



The Williams Pump Co., Norwalk, Ohio, are the successors of the Van Nette Water Purifier Co., and are the manufacturers of the Van Nette water purifier with which that company has been previously identified. The water purifier has compelled considerable attention to be paid to the purification of water throughout the various sections where it has been introduced. It is claimed that for every gallon of water drawn a gallon of air, the vital element, is circulated through the water. The oxygen thus introduced ventilates, vitalizes and purifies the water, and through its agency destroys all water worms, water lice and other germs of disease that have been found at various times to impair the purity of the water relied upon for the use of families. By the agency of the Van Nette water purifier all impurities from the foulest well or cistern will be removed by a few days' ordinary use, and subsequently the water can be kept equal in purity to that of a mountain stream. These claims of the manufacturers can be substantiated by numbers of testimonials where the water purifier has been used for a long time. The pump illustrated herewith is designed for wells and cisterns, and is calculated to draw 16 gallons of water per minute. Among the advantages claimed by the manufacturers, the following may be mentioned: It has no tubing to rust, burst or wear out; it never has to be packed, primed or thawed out; it will not freeze, having stood the test of 38 degrees below zero. The chain and buckets being made of galvanized steel, there is no inclination to rust. There is no wooden tubing, rubber or leather coming in contact with the water, and special attention is called to the fact that it is not necessary to pump out a pail of water to get a fresh, cool drink, as in its construction every cup goes down full of air to the bottom and fills with cold water as the air escapes. The cups on the chain in the Van Nette water purifier are placed two inches apart, throwing twice the amount of water usually thrown in pumps of a similar construction.

VAN NETTE WATER PURIFIER.

Improved Special Drills.

Geo. B. Burnham Co., 21 Hermon Street, Worcester, Mass., are manufacturing the upright drills which we illustrate in this article. Fig. 1 shows their No. 3 upright hand-drill and Fig. 2 the power drill. These drills possess a new style of gearing, claimed to give the most important results. Among the improvements noticeable in the construction of these special drills, it is claimed that high speed on the fly wheel can be held all the time. As there are a less number of gears engaged, less noise results, and less power is required to run them. In order to get slower speed, it is not necessary to change the crank to another shaft, the change being made instantly from fast to slow by simply throwing the lever. With a tight and loose pulley, as shown in Fig. 2, two speeds are obtained, which give the same results as a countershaft with a two-step cone pulley, the cost being greatly diminished. There is a ratio of 2 on spindle to 1 on crank, or a ratio of 1 on spindle to 1 on crank. It thus makes a very cheap and durable power machine, especially economical in the great saving of time when changing speed. This machine is destined more particularly for carriage makers and heavy blacksmith work. Will drill from 1-8 to 1 1-2 inch hole, having a diameter of spindle 1 5-16 inches, and is 15 inches in length. They will drill hole to centre of 16-inch circle, 4 1-2 inches deep, the greatest distance from spindle to table being 22 inches. The drill socket screws on to spindle, and takes drills with 41-64-inch round shank, or it can be removed and their Universal chuck put on in its place. The chuck is not, however, furnished with the drill. The drill has the automatic feed, with swing table 11 inches in diameter, and grinding attachment. The tight and loose pulleys are 8 by 2 1-2 inches face; extreme length, 66 inches; weight, 200 pounds. Further particulars may be had by addressing the manufacturers.

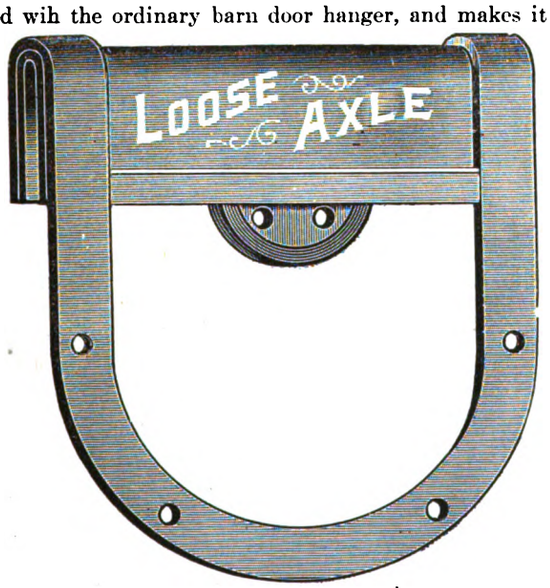
FIG. 1. IMPROVED SPECIAL DRILLS. FIG. 2.

The Dandy Sink Cleaner.

John W. Sudlow, 986 Halsey Street, Brooklyn, N. Y., is the patentee and manufacturer of the Dandy Sink Cleaner, which has been before the Hardware trade for several years, and has proved the most successful housekeeping specialty of the kind ever introduced to the trade. The Dandy Sink

Digitized by Google

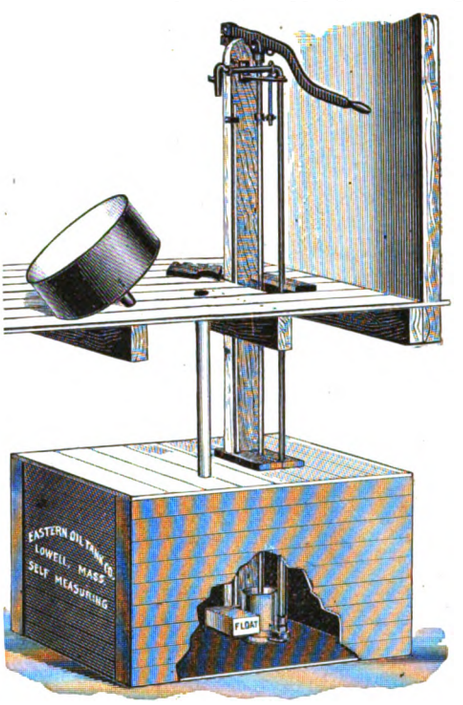
Cleaner is made from sheet steel of suitable gauge, handsomely and attractively lacquered a bronze color, the main part forming with suitable handle and crimped corners a miniature shovel of suitable size to use in the ordinary sink. Attached to the same by steel spring wire support holding it in its place, is a small sheet steel cleaner having a rubber edge, the whole well riveted, and strongly made, by the aid of which all the domestic refuse which usually collects in a



DANDY SINK CLEANER.

sink is readily swept into a corner, to be removed by the shovel attached, the rubber edge cleaner sweeping it off into the proper receptacle. The whole appliance is unique in its utility, and will be found a free seller by every Hardwareman adding it to his stock, as it can be retailed at a very moderate price, and pay the dealer a handsome profit.

Cronk's Steel-Covered Barn-Door Hangers.



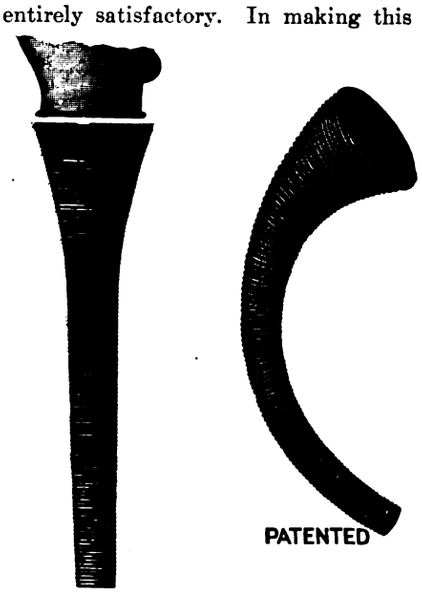
The Cronk Hanger Co., Elmira, N. Y., are makers of the Steel-Covered Endless Run Barn Door Hanger, an illustration of which is given herewith. This is claimed to be the only solid covered hanger placed before the Hardware trade, possessing features of strength and durability which commend it to the consumer, and has caused it to achieve the success universally credited to it. The wheel and axle is entirely protected from the storm, and in the method of its construction the continuous brace doubles its strength as compared wih the ordinary barn door hanger, and makes it correspondingly unique. It is made in four sizes, No. 1, 1 1-2 2 and 3, capable of a continuous run, according to size, of 6, 9, 10 and 15 feet.

CRONK'S STEEL-COVERED BARN-DOOR HANGER.

Eastern Self-Measuring Oil Tank.

The Eastern Oil Tank Co., 146 Fletcher Street, Lowell, Mass., are manufacturers of one of the most complete self-measuring oil tanks and pumps offered to the Hardware trade. There having been a great many complaints made against so-called self-measuring pumps, the above company feel that they are manufacturing the only system that comes within the scope of the requirements of the law covering the sale of this extensive product. The law in question states: "All liquids must be sold in sealed measures, and to meet the requirement of the laws of the United States, this seal must be in sight." They have provided a seal on their system, so that the State, city or town sealers by having their attention called to the same, can protect dealers completely and thus avoid liability to fine. The Eastern Self-Measuring Tank is made of iron and brass of heavy construction, and of great durability. It is simply constructed, having no cogs, wheels or gearing to create wear and tear, and increase the liability to get out of order. The style of the oil tank will be noted in the graphic illustration given herewith. The curved handle leverage has a duplex action, which gives a direct stroke, and lifts oil to any height with perfect ease. At each full stroke, two quarts is measured into customers' cans without tunnels or measures. A five-gallon can may be filled in less than a minute without spilling, dripping, shrinking or any

EASTERN SELF-MEASURING OIL TANK.



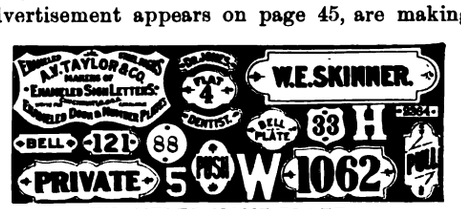
evaporation of the oil. The draught being only 4 1-2 inches, makes it, as claimed, the shortest draughted self-measuring pump on the market. Pumps can be built to order on the above system any length required, measurement being taken from bottom where tank sets, to the first floor. They are provided with an indicator that tells accurately the amount of oil on hand. If the tank is placed in the cellar, the indicator can be located on the first floor, avoiding the trouble of going below to investigate. Among the advantages claimed for this tank may be mentioned: Oil may be drawn at night with no possible need of a lamp, as the can can be simply hung on the apparatus, and the strokes can be counted until the desired amount is reached. They publish a catalogue giving full particulars, together with testimonials from those having used them, which it would be well worth while to send for by any Hardware dealer handling this commodity.

Spiral Wire Tubes for Grain Drills.

Poindexter & Hamilton, Cynthiana, Ky., are manufacturers of the spiral wire tubes for grain drills, with which this article is illustrated. These goods are being introduced to the trade in New York, Pennsylvania, Ohio and Michigan by the Lockwood-Taylor Hardware Co. of Cleveland, Ohio, they having been made general sales agents for those States. The tube can be attached to the receiver on any drill, which in its construction requires the use of rubber tubes. It is of

Digitized by Google

sufficient size to fit the largest receivers, and can be adjusted to properly fit smaller ones by simply cutting off one or more coils, and then screwing on. The regular size of the tubes is 1 7-8 inches at the flared end and 3-4 inch at the small end, inside diameter, and 21 inches in length. If required, however, the tubes can be furnished in any desired size. The manufacturers submitted these drills to the tests of experts interested in an invention of this character, and it was proved to be entirely satisfactory. In making this test a moving



SPIRAL WIRE TUBES FOR GRAIN DRILLS.

platform was prepared, covered with from 6 to 8 inches of lumpy, moist soil, with hurdles 18 feet apart, every fourth hurdle being 10 inches high. The Poindexter tube was then adjusted to a grain hopper, and conducted the same down into a spring hoe, or boot. On the same machine a standard rubber tube was also used. The result of the test that followed proved that the total number of hurdles was nearly 30 per cent. greater in number than those jumped with rubber tubes bending back under the same conditions as the wire tubes, no accident whatever happening to the Poindexter spiral wire tube during the test run, which extended to 28 miles, taking 10 1-2 hours to complete the circuit. A number of advantages are claimed by the manufacturers, among which may be mentioned the following: The tube is indestructible, lasting as long as the drill; it will not kink or buckle; it will not choke and cause the driver annoyance; being a force feed tube, there is always a continuous vibration; fertilizer can be used to perfection; the tube will not become displaced by corn stalks or other minor obstacles; it distributes the grain perfectly even. The tubes being always in perfect shape, from their improved construction, when the drill is started, the grain continues to flow regularly while tube is bent by any movement of the drill, hoes or other obstacles.

Enameled Name Plates.

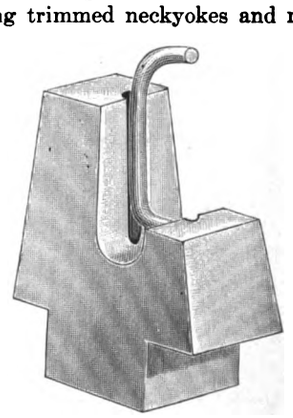
S. V. Taylor & Co., 1062 Central Avenue, Cincinnati, Ohio, whose advertisement appears on page 45, are making a spe-

ENAMELED NAME PLATE.

cialty of enameled street name plates, which they have supplied to a number of cities interested in properly keeping the names of their streets and avenues where they will prove a guide to the inhabitants. They also make a large number of steel signs for a variety of purposes, for outdoor use on wagons, trucks, houses, offices and railroads. The most appropriate window signs nowadays are these formed from white enameled letters, which are made by the above firm in several sizes, by which one pane or a whole window can blazon to the world the advantages to be obtained within. While the principal business of the firm is that of manufacturing enamelers, they make signs and sign letters from glass, wood, cloth, paper, metal and enameled iron, in all the modern modes and designs.

Practieal Lawn Weeder.

Walsh & Many, Cleveland, Ohio. Among the many useful specialties manufactured by this concern is the Practical Lawn Weeder, an illustration of which we give herewith. It is manufactured with tool steel blade and hollow steel handle. Operates in a very simple manner, quick working, and from its durable construction it may fairly be considered



PRACTICAL LAWN WEEDER.

indestructible. It is 39 inches in length, and weighs two pounds. For the purpose intended, the device possesses considerable ingenuity, and it should prove a quick-selling specialty to the Hardware trade.

Covert's Rope Tie Maker.

Covert's Saddlery Works, Farmer, N. Y., are manufacturing an exceedingly handy tool, which is called by them Covert's Rope Tie Maker, and is designed to be marketed at a moderate price. It is a practical and inexpensive method for the purpose of making rope ties. It consists simply of a steel die grooved to hold and form the wire clamp, as shown in the illustration herewith. After the rope is placed in position, a blow or two with a hammer simply fastens the clamp around the rope. The die is constructed in a way that it may be fastened in an ordinary vise for the purpose above mentioned, and this simple method of accomplishing the object will undoubtedly be appreciated by those wishing to make horse and cattle ties in a moderate way without going to the expense of fitting up expensive machines to accomplish the work. The necessary wire clamps, suitable for any size rope up to 3-4 inch diameter, can be furnished by the makers of this tool. This concern are well known as manufacturers of harness snaps and rope thimbles and other saddlery specialties, including trimmed neckyokes and neckyoke centres.

COVERT'S ROPE TIE MAKER.

They publish a very complete catalogue covering the line of specialties manufactured by them, which may be had upon request.

Old Lady (to chemist)—I want a box of canine pills.

Chemist—What is the matter with the dog?

Old Lady (indignantly)—I want you to know, sir, that my husband is a gentleman.

(Chemist puts up some quinine pills in profound silence.) —*Ex.*

REVIEW OF THE MARKETS.

Wire Nails: Business remains in a quiescent state and nominal transactions only are recorded. This is a dull month generally, and demand is extremely slack. Quotations may be named as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. off in 10 days:

To jobbers in carload lots	$2.20
" less than carload lots	2.25
To retailers in carload lots	2.30
" less than carload lots	2.40

New York prices remain as heretofore.

To retailers, carloads on dock	$2.48
" less than carloads on dock	2.61
Small lots from store	$2.60 to 2.65

Cut Nails: The Cut Nail market remains in same condition as last reported, with no change in current quotations. Large transactions are few and far between, and stocks are reported very light in dealers' hands. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days, 2 per cent. off in 10 days:

Carload lots	$1.95
To jobbers in less than carload lots	2.00
To retailers in less than carload lots	2.10

New York prices remain the same, the following may be said to represent the market:

To jobbers in carload lots on dock	$2.13
" less than carload lots on dock	2.18
To retailers in less than carload lots on dock	2.31
Small lots from store	$2.35 to 2.40

Barb Wire: An extremely moderate business is being done at this time in Barb Wire, prices, however, are well maintained. Quotations for domestic trade are as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	$2.50
" " Galvanized	2.80
To jobbers in less than carload lots, Painted	2.55
" " " Galvanized	2.85
To retailers in carload lots, Painted	2.60
" " Galvanized	2.90
To retailers in less than carload lots, Painted	2.70
" " " Galvanized	3.00

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

Plain Wire: No change is recorded in the Plain Wire market, transactions being at this period of the year uniformly light. Quotations, being without change, are as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. discount for cash in 10 days:

	Base sizes. Plain.	Galv.
To jobbers in carload lots	$2.15	$2.55
" less than carload lots	2.20	2.60
To retailers in carload lots	2.25	2.65
" less than carload lots	2.35	2.75

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS.)

Nos.					Galvanized.
6 to 9	Base				$0.40 extra.
10	$0.05	advance	over	base	.40 "
11	.10	"	"	"	.40 "
12 and 12½	.15	"	"	"	.40 "
13	.25	"	"	"	.40 "
14	.35	"	"	"	.40 "
15	.45	"	"	"	.75 "
16	.55	"	"	"	.75 "
17	.70	"	"	"	1.00 "
18	.85	"	"	"	1.00 "

For even weight bundles, 50 pounds and over, advance price 5 cents per bundle on above.

Bradley's Shelf Brackets: A concession has been made in the price of Bradley's Wire Shelf Brackets, made by Atlas Mfg. Co., New Haven, Conn. The discount quoted is 80 per cent. for full cases, and discount 75 and 10 per cent. for broken cases.

Binder Twine: No changes are reported in the quotations made on Twine, f. o. b. New York, Philadelphia or Boston, subject to a reduction of 1-4 cent per pound for orders less than a carload lot and over 10,000 pounds, and a reduction of 1-2 cent per pound for carload lots:

White Sisal, 500 feet to pound	8½ cents.
Standard, 500 feet to pound	8½ "
Manila, 500 feet to pound	11½ "
Pure Manila, 650 feet to pound	12½ "

Cordage: Very light demand for Cordage, buying being on a limited scale and applying to actual wants. Some manufacturers, however, report being very busy. The following quotations may be said to represent the market, with the usual rebate of 1-4 cent a pound, when purchased in carload lots:

	Pounds. Cents.
Manila, 7-16 inch and larger	11
Manila, ⅜ inch	11½
Manila, ¼ inch and 5-16 inch	12
Sisal, 7-16 inch and larger	8
Sisal, ⅜ inch	8½
Sisal, ¼ and 5-16 inch	9
Sisal, Lath Yarn, Medium and Coarse	7½

Linseed Oil: Dean Linseed Oil Co., under date of July 11th, quote as follows:

In lots of less than 5 barrels..... 70 cents per gallon.
In lots of 5 barrels or more..... 69 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.
Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 76 cents per gallon.

John H. Graham & Co., 113 Chambers Street, New York. We have received the following announcement, having reference to the important addition to the agencies already represented by the above firm, of the Continental Tool Co., of Frankfort, N. Y.:

To Whom it May Concern:

The Hardware Trade are generally well informed regarding the modern equipment, together wth the convenience of arrangement and excellent shipping facilities of our new plant. We now beg to advise that we have recently appointed John H. Graham & Co., of New York, our exclusive selling representatives for the export business, on our complete and comprehensive line of shovels, forks, hoes and rakes. We take this opportunity to solicit from such of the trade as have not already tested the superior quality, style and finish of our tools, at least a trial order; and to those who have already favored us with their valued business, we trust that they will extend to Messrs. Graham & Co. a continuance of their trade. Hoping to receive your valued orders, we beg to remain,

Very respectfully,
CONTINENTAL TOOL CO.
W. W. ROBERTS, Treasurer.

In addition to above, the Continental Tool Co., also announce as follows:

To Whom it May Concern:

We desire to inform the Hardware Trade that we have recently arranged with Messrs. John H. Graham & Co., of New York, in conjunction with our regular salesmen, to handle the product of our Shovel factory, and we hope to be favored with your valued orders, either through Messrs. Graham & Co. or direct. We are now carrying a complete stock of these goods in New York City, and are in a position to ship from there promptly as well as direct from the factory. Soliciting your valued orders, we beg to remain,

Very respectfully,
CONTINENTAL TOOL CO.
W. W. ROBERTS, Treasurer.

H. B. Ives Co.: We have received the following announcement regarding the formation of a new company under the above name:

We desire to notify our patrons that the business heretofore conducted by us will hereafter be carried on under the corporate name of the H. B. Ives Co. The personnel of the new company is essentially the same as that of the old firm. It has purchased the five-story factory at 11 to 17 Artizan Street, and thoroughly equipped it with the most improved

Digitized by Google

machinery, with the result that it can turn out a larger quantity and better quality of work than ever before. The new corporation has acquired the entire assets of H. B. Ives & Co., and assumes all their liabilities. The manufacture of the lines of Hardware Specialties so well known to the trade as the product of H. B. Ives & Co. will be continued and other lines added. The increased and improved facilities will insure the same prompt attention in the future that the trade has received in the past. Thanking you for past favors, we solicit for the new firm a continuance of your patronage.

Very truly yours,
H. B. IVES CO.

New Haven, Conn., U. S. A., July 14, 1900.

THE ALBANY TRADE.

The second half of the year has been entered upon, and comparisons with six months ago divide one's interest with the outlook and preparation for the remainder of the year.

That the volume of trade has been large, showing an increase on the corresponding months of 1899, will be generally admitted, and the present outlook indicates its continuance.

The shock caused by the heavy reduction in the price of wire and nails has gradually worn away and the stimulating effect shown by increased sale and consumption of these commodities has lessened to some degree the losses sustained by merchants who carry stocks for the prompt supply of the demands in their respective territories. The bitter must be taken with the sweet, and some consolation is derived from the few manufacturers who credit up the decline in stock on hand when prices of their goods are reduced. These few oases in the desert make lasting impressions on the merchant and constitute the strongest arguments for loyalty to these particular goods.

It would take a pretty good guesser to forecast the future with any certainty of correctness—a review of the trade papers for the year past makes excellent reading and even shows that they are not always infallible.

The somewhat lower prices in a few leading lines in which raw material is so important a part expected about July 1st, have materialized and the changes here have been but slight. Although some raw materials are reduced, yet labor still commands the wages that have been prevailing, and as the latter cuts such an important figure in the cost of so many goods, general reductions along the whole line of Hardware seems hardly threatened.

The confidence of the representatives of leading steel and iron consolidations noted of late in the newspapers appears to have resulted in no concert of action. While it appears that the price of many products have about reached bottom, yet it is generally believed the market price of pig iron and billets is still high in proportion to some finished products, though no public announcement of future reduction has been made. The extreme heat of late, so universal throughout the country, has lessened the activity of tradesmen and salesmen and invited a closer observance of the prevailing vacation and half-holiday season so much needed after the wear and tear of the busy half year just passed.

The closing of factories, mills, and shops for the customary inventories, repairs, and semi-annual adjustments will assist in making business quieter for a brief period at least. The next few weeks will be watched with interest in respect to prices, and the thrifty merchant will prepare to keep his assortment complete for the Fall trade commensurate with the demand that continually comes to the progressive "up-to-date" Hardware dealer. ALBANY HARDWARE & IRON CO.

THE PORTLAND TRADE.

The extreme hot, dry weather which prevails through Eastern New England, is making it very hard for our farmers, and when the farmers are having a hard time the jobber is always sure to suffer to a greater or less extent.

Building in this section seems to be at a standstill, there being hardly anything except a few large manufacturing plants being built. Plans for private dwellings have been laid by for another season, as the builder's estimates in the Spring were so large that those contemplating building would not let any contracts, preferring to wait until the prices of lumber and other building material had got back to their proper level. Had present conditions existed in March we should have had quite a good many building contracts let, which would have been a great advantage to Hardware men.

For the present prices are not unreasonable, and since the decline in lumber, nails and steel beams our architects have had about all they wanted to attend to planning for future work.

Summer business is holding up unusually well. Collections are good, and we think the prospect for a good Fall trade is excellent. THE EMERY-WATERHOUSE COMPANY.

THE BALTIMORE TRADE.

Having practically closed the business of the old firm June 30, and started new business July 1, the writer is again at the helm steering the newly launched bark into clear waters. During the past six months we have only purchased such goods as were actually sold and have therefore not kept track of the numerous changes which occurred within this time, but now that we are laying in stock we find a peculiar and weak market. In consequence of existing conditions we are marketing for each meal, hoping manufacturers will soon see the error of their ways, and come down from the roof. The little rush of business we've experienced since the first of the month has been most encouraging, and we hope to have a good Fall trade if energetic pushing will get it. Reports from different farming sections near us show that the recent drought has been severe on crops. Peas have been affected by little insects known as pea lice. Early tomatoes and cabbages by their especial worm enemies, and potatoes, have been only bringing the farmers of the eastern shore of Virginia about 60 to 65 cents per barrel. This does not indicate a superabundance of money in the hands of farmers in this section, nor their ability to pay inflated values for manufactured goods. We cannot have general prosperity until the consumer is able to pay for the necessaries of life, and an occasional luxury thrown in; so any reforms that will benefit the poorer classes and particularly the agriculturist will be most welcome. Collections are fair. H. W. WEBB & SONS.

THE CLEVELAND TRADE.

If government is to be for the benefit of the governed, it cannot always be by the consent of the governed. The civilized world are about to dictate the government to China, and it should be for the benefit of the people regardless of their consent. This may not be democratic, but it is practical common sense. If Cuba, Porto Rico, and the Philippines are ever to have a government with the consent of the governed they must first have one for the benefit of the governed as a preparation.

If this is cruel, it is the cruelty of kindness by the Nation to its wards. The emphasis must be upon benefit rather than upon consent. The obligation imposed on any people to decide, furnishes the authority for its execution. The basis of patriotism is the consensus of personal interest, the greatest good to the greatest number. The right to prevent harm to people under a nation's control is based on the moral law, and its occasional abuse cannot abrogate it.

Had Cuba been governed for the benefit of its people, there would have been no excuse for our interference. An excess of democracy in our Declaration of Independence has misled the public mind and created an impression that the consent of the governed is the equivalent of the benefit of the governed, whereas one is universal eternal principle and the other a dependent one.

The prosperity, happiness and well-being of the people is always promoted by one, and may be destroyed by the other. Commercial prosperity has come to mean development in what makes life worth living. Comfort, civilization and morality are its concomitants, and this does not depend upon government always being with the consent of the governed.

Digitized by Google

Promoters of trade and commerce are the missionaries of civilization and religion, providing always government is for the benefit of the governed, so it is evident that even the immortal Declaration of Independence is not of equal inspiration in all its parts.

Combinations and trusts may modify, but cannot control events; they are not superior to the law that consults no private interests, and that has its way without asking consent.

This power, or law, uses both individuals, political parties and nations as its instruments, compelling co-operation with or without consent, but always for the benefit of the governed. In and under this law we live, move and have our being in commercial as well as moral relations.

The indications are favorable for a good fall trade, notwithstanding the almost entire failure of the wheat crop in Ohio. The country is so large and the crop so diversified that the scare will soon be effaced, as other crops are being produced in its place. The country is too prosperous and the people too hopeful to be discouraged.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE BIRMINGHAM TRADE.

We have nothing very encouraging to write. Last year at this period, goods were advancing and hard to get them fast enough, and now the opposite is the case. Goods are declining and manufacturers are anxious for orders. We feel that this district is doing better than some other sections. There is considerable railroad construction under contract, giving employment to many laborers, and creating demand for supplies.

The Semet-Salvery Company, at Ensley, Ala., have decided to enlarge their plant, which will require an outlay of considerable money and we also hear that the Birmingham Cement Company will rebuild their plant, recently destroyed by fire. It is stated that the Tennessee Coal, Iron & Railroad Company will soon begin the work on a rail and structural mill, and thus have a large outlet for their material.

The rains are not so frequent and the agriculturalist is more hopeful. We think if prices would become steady and confidence established, that the demand would be good and trade lively. We all understand how to work on an advancing market, better than we do when goods are declining and unsettled.

We do not see manifested yet, any great degree of anxiety about political results. There is some anxiety about the complications in the Orient, showing that we have obligations to our fellow-man, even though far away and whom we have not seen. We will have to go around the world when we seek to find the circumference of our influence and interests. MOORE & HANDLEY HARDWARE COMPANY.

THE SAGINAW TRADE.

The outlook for Fall business is much brighter in Michigan to-day than it was 60 days ago. The crops are good, and the retail merchants' buying has been carried on in such a conservative manner, that stocks are quite badly broken and the demand for goods is consequently better. The volume of business for this month to date is quite satisfactory, although this is always the quietest time of the year.

MORLEY BROTHERS.

THE CHICAGO TRADE.

We are pleased to state that trade with us has been keeping up remarkably well on all lines, and especially so on seasonable items. While orders for such goods have been given later than usual, they are now coming in with a rush and in certain departments are taxing us to our utmost. Shelf goods are also moving very freely and our business on builders' Hardware is increasing. As the labor troubles have about ended, we anticipate quite a large sale of builders' Hardware in the next sixty days particularly here in the city. During the early part of the month we had very hot weather, when there was something of a falling off in business, more especially with respect to our city trade. In the middle of summer it is, of course, customary for merchants as well as their clerks to take Summer vacations, as this is the season of the year between the Spring and Fall trades, when we have less to do than usual.

With an exception, however, of the States of Nebraska, a small portion of Kansas and part of Dakota, the entire Western and Northwestern country seems to be blest with fine prospects for a good grain crop. Wheat, corn, and oats are fetching an uncommonly good price. The country as a rule is prosperous and we are expecting that Fall trade will open up about the first of August with some considerable vigor. There were a few changes made by manufacturers on the first of July, and we are assured by representatives of mills throughout the country that their expectation is to hold prices firmly through the coming season. In some cases it is even intimated that there will be a scarcity in some classes of manufactured goods.

Manufacturers of axes and edge tools inform us that they already have more specifications for goods than they can deliver for the next three or four months to come. Prices of axes by all the leading manufacturers are at least 50 cents per box higher than they obtained from jobbers who gave their first orders last February.

Trade in snaths, scythes, ice cream freezers, grass hooks, and lawn mowers is remarkably good.

WELLS & NELLEGER CO.

THE ST. PAUL TRADE.

According to the best information, we shall have but 50 per cent. of our usual wheat crop in both the Dakotas and Minnesota, and as this is our main dependence, we feel rather poor. New buildings and new enterprises will be scarce, but the necessaries of life will be here. This is the nearest to a failure in crops that we have ever had and we feel it worse than if we lived in Kansas, where they have gotten used to it by having failures every other year.

The situation in regard to prices does not improve, the jobbers are still trying to reduce stock and the retailer is getting the benefit. C. W. HACKETT HARDWARE CO.

THE DAVENPORT TRADE.

In a letter just received from Messrs. V. L. Tissera & Co., 3 Canal Row, Colombo, Ceylon, they say: "There is a field for the Hardware business, particularly in the building accessories, such as bolts, locks, hinges, etc." Proceeding, the letter says:

"As we are aware, you have a large interest in these commodities, and also being a member of the National Hardware Association you may be able to secure us a great many accounts in this line, with samples sent forward. We believe Robert Sickels, your President at New York, will be glad to aid us in this matter as well, since it will not only redound to our mutual benefit but to the whole country at large. You will doubless notice that we are carrying out my original plans, and rely on receiving your usual sympathy and support in the matter, and I further rely upon my American friends, also their strong support in tackling the Oriental market."

We make brief extracts from the letter that all readers of Hardware may have the benefit of this information from that far away island of spicy breezes.

The amount of sales for June was larger than last year. Weather warm, but favorable to growing crops, which are looking very well indeed. Collections are satisfactory.

SICKELS, PRESTON & NUTTING CO.

THE OMAHA TRADE.

The usual midsummer dullness, while reasonably expected to be perhaps more noticeable than usual, is hardly meeting expectations in this respect. There is a good, fair, if not large volume of business moving, and the active demand for barbed wire has hardly spent its force, and the sales so late in the season are something unusual. Builders' Hardware is very quiet, as is usually the case at this time of year, but seasonable goods are in active demand and are still being

Digitized by Google

called for. The volume of business is all that can reasonably be expected, and collections are considerably above the average. Considerable apprehension for the future was felt a week ago on account of the drouth prevailing over most of the State, particularly the western portion; this, however, was broken by a general heavy rain a few days ago, which has insured possibly the largest crop of grain that the State ever raised, and farmers and dealers are correspondingly encouraged. In a general way, the grain crop bids fair, with favorable conditions from now, to be above the average, though limited areas have suffered from drouth and hail, but as far as present conditions indicate, we may safely figure on a large volume of Fall business.

RECTOR & WILHELMY CO.

THE PITTSBURGH TRADE.

While this is vacation season, the part of the force on duty is kept fully employed and sales for the first half of the month show a good increase over last year.

There is a good consumers' demand for almost the entire line and retailers' orders are frequent, and they demand quick shipment. No one is buying in quantity, yet the actual needs make up quite a respectable total. There will soon come a time when rock bottom will be reached in pig iron and billets, if it has not been already reached. All that is needed is to feel that that time has come when orders will be freely placed. We believe there will be an active Fall trade, and prices once started on bed rock, will be firm, and the demand good all along the line.

LOGAN-GREGG HARDWARE CO.

THE SAN FRANCISCO TRADE.

Vacation days have come, the gladdest of the year, and Hardware men are leaving town to fish for fish and shoot for deer.

A local Hardware jobber's salesman, who is said to be worthy of encouragement and is hoping for early promotion on merit, contributed the foregoing, including this quartet trade personal:

Behrend Joost, of Joost Brothers, Inc., is vacationizing at summer resorts in Contra Costa County; L. H. Kohn, of L. H. Kohn & Co., is with his wife and daughter enjoying an outing in Yosemite Valley; C. A. Bennett, of Bennett Bros., is at Capitola, a lively seabeach center near Santa Cruz, and Chas. Watts, manager of the Alexander-Yost Company, is making ready for a start next week, up into the Sierras to pitch his tent on the shady side of famous Lake Tahoe.

The following score of names represent the charter membership of the new trade society, the San Francisco and Oakland Retail Hardware Dealers' Association: Osborn Hardware & Tool Co., Alexander-Yost Co., Palace Hardware Co., Joost Bros., S. B. Bogart, S. J. Dean, Bennett Bros., E. E. Gillen, J. H. Kruse, Philpot & Armstrong, L. H. Kohn, W. Havard, C. W. Marwedel, Henry Gracy, W. A. Etting, F. G. Norman & Sons, Chas. Brown & Sons and Geo. M. Hickman, all of San Francisco; Pierce Hardware Co. and John P. Maxwell, of Oakland.

This association wants it understood that it is not formed to assist any particular firm or firms, or any particular branch of the Hardware business, but for the general welfare of the Hardware trade, and to discourage unfair and unmercantile competition, to remove, by concert of action, all evils and customs that are against good policy and sound business principles, and to take such other action from time to time that will subserve the best interests of each other, and the prosperity of all. And as retailers they desire co-operation with, and the good-will of the wholesalers, recognizing that each have rights and equities which the other should respect, thereby making their business agreeable and profitable to all legitimately engaged therein.

The voice of the retail trade dovetails nicely with this July 17th expression given to the Hardware correspondent by Alfred C. Rulofson, head of Baker & Hamilton's Hardware department:

"Hopeful expectancy is the feeling just now. Trade activity now in evidence, generally speaking, is hovering roundabout the usual midsummer level; but it is not by any means the lowest level that ever happened hereabout. Small sort-up orders are the rule; and this, by the way, is the sort of careful business we like best to see. We are expecting a highly satisfactory Fall trade; in fact, we anticipate that this end of the century year will round up for us a grand business that will rank as the best we have had in a long time."

Within the last month the San Francisco Board of Trade have had to deal for creditors with thirty-two Pacific Coast business firms in distress, but of this number, only one is classified under the head of Hardware, reported on as follows:

Winchell Hardware Company, of Vallejo, Cal. Assets, $5750; liabilities, $9000. Settlement effected at 65 per cent. on $6047.80, $1500 cash, $1500 note indorsed, payable August 6, 1900; $931.11 note indorsed, payable September 20, 1900. Notes held by W. W. Montague & Co. for benefit of creditors.

TRADES PRESS ASSOCIATION.

Customs Regulations in Canada.

Commercial Agent Johnson, of Stanbridge, under date of June 9, 1900, reports that the Canadian Government has adopted similar regulations to those of the United States, requiring triplicate invoices, one to be filed at the port of entry, one with the shipper, and the remaining one to be forwarded to the Department of Customs at Ottawa.

On June 15, Mr. Johnson adds that the department is putting into force the following regulations, which are of particular interest to importers:

The invoice produced for entry at the Custom House, in respect of goods purchased by an importer, shall be an invoice from the person, firm, or corporation selling the goods to such importer. The invoice shall be properly certified and shall faithfully represent the transaction between the seller of the goods and the importer in respect of such goods, and shall truly exhibit the actual price paid and to be paid for the goods by the importer making entry thereof, including the cost of coverings of any kind and all charges and expenses incident to placing the goods in condition, packed ready for shipment direct to Canada. Goods bona fide exported to Canada from any country, but passing in transit through another country, shall be valued for duty as if they were imported directly from such first-mentioned country, subject to the following conditions, namely:

(a) The bill of lading for the transportation of the goods to Canada shall show the ultimate destination of the goods from the place of original shipment to be a port in Canada, without any contingency of diversion, and the goods shall not

be entered for consumption or for warehouse, or remain unclaimed, or remain for any purpose other than their transshipment or transit in any intermediate country.

(b) The said bill of lading for the transportation of goods from the port of original shipment to Canada, or a certified copy or copies thereof, and such further evidence as the collector may require to establish the direct exportation of the goods from the place of original shipment to a port in Canada, as hereinbefore provided, together with a proper invoice of the goods, shall be produced by the importer to the Collector of Customs at the port of entry; provided that a customs certificate showing the trans-shipment of the goods in a British or foreign port, without entry thereat, for consumption or for warehouse, or for any other purpose than their transportation in transitu to the port of destination in Canada, may be required by the said Collector as further evidence, in any case where he deems it necessary, in addition to the bill of lading; provided also that any original bill of lading when so produced to the Collector and marked with the customs stamp may be returned if a "transitu statement" (in a form approved by the Minister of Customs) containing the material facts set forth in the bill of lading respecting the consignment, including package marks and freight charges, be filed with the Collector and be by him compared with the particulars in the original bill of lading.

(c) Goods subject to an ad valorem duty not imported in conformity with these regulations shall be valued and appraised at their fair market value, as sold for home consumption in the principal markets of the last country whence the goods were transported into Canada, at the time when the same were exported from such country.

Miss Marjorie—And how is your son James getting on, Mr. Giles?

Giles (whose son has gone to London "in service")—Well, to tell ye the truth, Miss Marji, Oi'm very troubled about 'im. Oi 'ad a letter last week, an' 'e says that 'e's living in a buildin' with 'undreds of people in it, an' it's three or fowr 'ouses one on top o' t'other. 'E says there's a railway carriage without an ingin' that goes up the middle of th' buildin', an' the lights is all in bottles, an' you turns 'em on with a tap without usin' a loocifer, an'——

Miss Marjorie—But why are you troubled about James?

Giles—Aye. Oi fear 'e must 'a took to drink, Miss"—*Punch.*

Of all occupations the average life of soapboilers is the highest, and that of grindstone-makers the lowest.

HARDWARE DEALERS' RECORD.

Hardware dealers, the country over, are requested to contribute to this page. News of new stores, changes, improvements, etc., will be gladly received, and promptly published.

New Hardware Stores.

Baltimore, Md.—The Hardware Supply Co. has been incorporated, with capital stock of $15,000, by William H. Whiting, J. Walter Abbott, Andrew V. Cutino, James Walker and others.

Corning, N. Y.—Frost & Williams expect to open a branch Hardware store at Big Flats.

Findlay, O.—J. D. Buss, the Rawson Hardware merchant, has purchased a Hardware store in Kalida, and will put his son John in charge.

Greeley, Col.—J. H. Clark has opened his new Hardware store in the Dupree building, Main street.

Hanna, Ia.—The North-Western Grain Co. is putting in a Hardware store.

Krum, Tex.—Jackson & Dodson are repairing their large grain house preparatory to opening of a large stock of Hardware and implements by H. L. Lathrop.

Kuhl, Pa.—F. Hirt, Jr.

Munith, Mich.—John Schnackenberg.

New Rochelle, N. Y.—W. F. Davids and E. H. Harmer have opened a Hardware store in the new Welinsky building, at the corner of Main and Lawton streets.

Seatonville, Ill.—J. C. Glover & Co.

Westport, Ind.—N. E. Howe has leased his storeroom on Main street to Fred Myers, who will put in a stock of Hardware.

Changes and Improvements.

Beeville, Tex.—Burrows Bros., the Hardware and implement people, are erecting a large warehouse, which will be completed by the end of the month.

Bel Air, Md.—Edward H. Hall has leased the business stand of P. F. Ball and purchased his stock of Hardware.

Bertha, Minn.—H. F. Heinck has bought out Mr. Gibson's Hardware business and taken charge of it.

Bourbon, Ind.—J. A. Cutler will remove his stock of Hardware into the building adjoining his present location on August 1.

Brashear, Mo.—C. A. Chadwick, who recently exchanged his Hardware store to Willis Eshom of Gibbs, is now back at his old stand again.

Bridger, Mont.—The Haskins Hardware Co. has just completed the erection of a commodious warehouse.

Gardiner, Me.—The Decker & Day Hardware & Coal Co. is the name of the new company that has absorbed and is successor to the firms of Dingley & Decker, Dingley Hardware Co. and Dingley Bros.

Connellsville, Pa.—The addition to the Munson building on Main street is about completed and the Hardware store of Munson Bros. is now located there with an entrance on Orchard alley.

Greenwich, N. Y.—Hiram C. Hill has sold his Hardware stock to George E. Trumbull and James McGrouty.

Kenyon, Minn.—L. Olson has sold his interest of the Kenyon Hardware Co. to C. A. Petterson.

Kingston, Ill.—Campbell & Houston are invoicing their Hardware stock and at the conclusion of the work J. H. Campbell will assume control.

Lake Charles, La.—The Rock Hardware Co., Limited, have closed a contract with H. G. Reimers for the erection of their Ryan street building.

Lancaster, N. Y.—Delzer's stock of Hardware has been moved from the Schwartz building on West Main street into the John Stephan block on the same street.

Long Prairie, Minn.—The building occupied by W. A. Barto's Hardware store is being improved very much in appearance by a fresh coat of paint.

Louisville, Ky.—Amended articles of incorporation have been filed in the office of the Secretary of State by the W. B. Belknap Hardware Co. It increases its capital stock from $450,000 to $750,000.

Madisonville, Tenn.—A. J. Patterson has sold his interest in the Hardware store of McFarland & Patterson to Ulie Milligan.

Mitchell, S. Dak.—Matt Gosche has closed the purchase of Wm. Koch's Hardware store at the corner of Main street.

New London, O.—The old firm of Washburn & Skinner, dealers in Hardware, has been dissolved by the retirement of Mr. Washburn, who has sold his interests in the business to N. O. Allen.

Orlando, Fla.—The Hardware and furniture firm of Guernsey & Long has dissolved, Mr. Long selling his interest in the business to his partner.

Osceola, Ia.—E. F. Freeman has disposed of his Hardware store.

Ottumwa, Ia.—The Hardware, stove and tinware establishment of the late P. C. Biddison, at 322 East Main street, has been purchased by Brown and Wm. McCarroll, and the firm will in the future be known as McCarroll Bros.

Portsmouth, O.—The J. C. Hibbs Hardware Co. have moved into their new quarters.

Pueblo, Col.—W. E. Andrus, 322 North Santa Fe avenue, has formed a partnership with J. B. Ferguson, under the firm name of the Andrus-Ferguson Hardware Co.

Reading, Mich.—Hartwell & Doig have moved their stock of Hardware into the new store built this summer by S. N. Curtis.

Skowhegan, Me.—The interior of the Hardware and stove store of F. G. Heald & Co. has been entirely torn out and is to be papered and repainted, new shelving built and many other repairs made.

Superior, Neb.—W. F. Allen has sold out his Hardware store to T. J. Burgess of St. Joseph, Mo.

Tigerton, Wis.—Arthur Heins has bought the Roemer Hardware store.

Tomah, Wis.—Smith & Thomas are now located one door south of Warren's bank with their stock of Hardware, where they will hold forth until the completion of their new brick store.

Business Embarrassments.

Clark's Hill, Ind.—John E. Bates, Hardware merchant, has made an assignment to C. P. Marcum.

Gillespie, Ill.—A petition in bankrutpcy has been filed by Francis G. Kimble and Albert G. Kimble, doing a Hardware business under the firm name of F. G. Kimble & Co. The firm liabilities are scheduled at $1,100.40 and the net assets, $638.01.

Montreal, Can.—Martin Beck, Hardware merchant, has assigned at the instance of Wm. B. S. Reddy, with liabilities of about $3,500.

Osceola, Ia.—A petition for an involuntary declaration of bankruptcy has been filed in the United States Court by creditors of the Hardware firm of Ruby W. Meyer and John W. Bernard.

Fires in Hardware Stores.

Cass Lake, Minn.—C. M. Taylor & Co.'s Hardware store has been destroyed by fire. Loss, $3,500.

THREE-BAR LEATHER
shoe-soles and top-lifts (for heels) are the best.
Write us; we'll give you points.
Baxter Schenkelberger & Co,
350 Congress street, Boston.

Germany increased her pig iron output from 1,988,000 tons in 1872 to 7,215,000 in 1899.

The Bon Marche in Paris has the largest kitchen in the world. It provides food for all the employees of the house, 4000 in number. The smallest kettle holds 75 quarts; the largest, 375 quarts. There are 50 frying-pans, each of which is capable of holding 300 cutlets at a time, or of frying 220 pounds of potatoes. When there are omelettes for breakfast, 7800 eggs are used. The coffee machine makes 750 quarts of coffee daily. There are 60 cooks and 100 kitchen boys employed.

Within the last few years it has been repeatedly asserted that the stock of first-class lithographic stone, which comes from certain German quarries, was being exhausted, and that the supply would soon be gone. The American Consul at Nuremberg writes to the State Department to say that this story is false. There is practically an unlimited supply of good stone, to say nothing of an abundance of an inferior quality.

The greatest banquet in history took place August 18, 1889, when the 40,000 Mayors of France sat at a table in the Palais de l'Industrie in Paris. There were three relays of about 13,000 guests each. To prepare the feast required 75 chief cooks, 13,000 waiters, scullions, cellarmen and helpers, 80,000 plates, 52,000 glasses, knives, forks and spoons in proportion, 40,000 rolls, and fish, meat and fowl by the ton. The banquet was part of the centenary celebration of the events of 1789.—*Exchange.*

The great bulk of Yucatan's exports is made up of one thing, hemp. The country is covered with plantations of it, some of them covering eight and even ten square miles. The plants are about two feet high when first ready to bear, usually five or six years after the slips have been put in the ground. The hemp is a species of cactus, and grows to the height of a man. From its thick central stalk it puts out a forest of leaves in every direction. These leaves are three or four feet long, narrow, and pulpy. A certain number are cut off about twice a year, and from them the hemp commerce is made by the natives. A hemp plant will bear for eighteen or twenty years.

"I never was ruined but twice," said a wit; "once when I lost a lawsuit and once when I gained one."

WE would call the attention of the Hardware Trade to our Sales-offices in Chicago, Boston and San Francisco. We have assembled samples of our lines at these offices, exhibiting more especially the better grades of Builders' Hardware.

We solicit the inspection of the samples and inquiries for prices. Requests for estimates from plans, comparative schedules, or on Hardware shown in our catalogues will receive prompt and careful attention.

We maintain complete lines of samples at our Factory and Warehouses.

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Alton, Ill.—The well-known mining tool firm of Beall Bros. will be organized under the State laws as a corporation. The capital stock of the new organization will be $90,000.

Bridgeport, Conn.—The Curtis & Curtis Co. has been organized with a capital of $200,000, in 2,000 shares of $100 each, for the purpose of making and dealing in machinery and tools, etc.

Calais, Me.—The Maritime Edge Tool Co., composed of Charles E. Heustis, John Wilson and Harry W. Broad, expect to begin the manufacture of axes at an early date.

Canton, O.—The Excelsior Hard Rubber Co., to manufacture all kinds of rubber goods and saddlery Hardware, capitalized at $10,000, has been incorporated by F. E. Pfendler, M. E. Fisher, M. E. Halter, G. R. Pfendler and A. V. Fisher.

Detroit, Mich.—The Wayne Stove Co. has filed articles of incorporation. The capital stock is $5,000.

Detroit, Mich.—The Continental Varnish & Paint Co. has been incorporated; capital, $10,000 paid in. Incorporators: Chas. R. Brown, Otto E. Enell, L. Johnson Lennox.

Dublin, Ga.—The Oconee Mfg. Co. has been incorporated with a capital stock of $5,000. The incorporators are Messrs. J. A. Spain, J. A. Jackson and B. H. Rawls and it is proposed to manufacture axe handles, hoe handles, baseball bats, etc.

Dublin, Ga.—The Dublin Plow Works has been incorporated. The incorporators are J. L. Manning, J. A. Spain, J. D. Smith and Walter B. Jones, of Dublin; Moses Smith, of Jasper, Fla., and John B. Floyd, of Wolcox County, Ga. Capital, $10,000. Will manufacture all kinds of plows, plow stocks and make a specialty of the Mose Smith roller patent plow.

Joliet, Ill.—The Triumph Adjustable Stove Pipe Mfg. Co. has been incorporated, manufacturing iron products. Capital, $15,000. Incorporators: G. B. Barclay, H. T. Keltie, G. E. Antram, all of Joliet.

Louisville, Ky.—The Brinly, Miles & Hardy Co., manufacturers of plows and other farm implements, having recently reorganized, the new concern has filed articles of incorporation in the County Clerk's office. The style of the new firm is the Brinly-Hardy Co., Mr. C. L. Miles having withdrawn from the firm. Its capital stock is placed at $75,000. The incorporators are as follows: I. E. C. Brinly, J. E. Hardy, J. L. Brinly, W. B. Hardy, L. R. Hardy.

Norfolk, Va.—The Columbia Filter Co. has been incorporated. Capital, $100,000.

Port Henry, N. Y.—A cartridge factory is soon to be started at Swanton, Vt., in connection with the Robin Hood Powder Co.

San Antonio, Tex.—The Wrought Iron Range Co., of St. Louis; capital stock, $1,000,000, and the Minneapolis Threshing machine Co., of Minneapolis, with a capital stock of $1,000,000, have been granted permits to do business in Texas.

St. Paul, Minn.—The Aetna Powder Co., of Indiana, has been incorporated in Minnesota under the Somerville law. The capital stock is $300,000, of which $14,200 is assigned to this State.

Toledo, O.—The Toledo Tool Co., a new manufacturing concern, has purchased four acres of the old McKee farm, below Economy, on the Ohio River, for $21.000. The company will erect a large factory on the site.

Wichita, Kan.—A. T. Buckridge has organized a company with a capital of $25,000 to establish a pump factory in this city. It is his intention to have it in operation by August 1.

Changes and Improvements.

Boston, Mass.—The property of the Atlas Tack Co., which is located in several cities and towns of Massachusetts and other States, has been sold under foreclosure proceedings for a second time at the Real Estate Exchange and Auction Board here. The purchaser was Miss K. I. Harrison, of New York, private secretary of H. H. Rogers, of the Standard Oil Co., and the price paid was $200,900. The property disposed of consists of factories, real estate, privileges, etc., in Taunton, Fairhaven, Island Creek, Duxbury and Plymouth; also merchandise and warehouses in Boston, Lynn, New York, Philadelphia, San Francisco, Chicago and Baltimore.

Cedar Rapids, Ia.—Contracts soon will be let for the construction of a building for the Lang Cutlery Co. to be erected at Third Street and Seventh Avenue. The structure will be 40x106, two stories in height. The entire plant will be located therein, with offices, packing, buffing, plating, grinding and polishing departments separated.

Chester, Pa.—The additions and improvements to the edge tool works of H. B. Black & Co. have been completed and the plant is again in operation. A new engine, built by Wetherill & Co. and a new tempering house are the leading improvements, which place the works in better condition for handling large orders than at any time in the company's history.

Fairport, N. Y.—The Thistlewaite drill factory is to be moved to Despatch.

Kokomo, Ind.—At a meeting of the stockholders of the Kokomo Rubber Co. it was decided to build another large two-story addition to the South Kokomo factory. The new wing will be built on the north side of the present buildings and will be 44x100 feet, constructed of brick and stone with a slate roof.

Lancaster, Pa.—The Union Lock & Hardware Co., whose works give employment to several hundred men, have begun an extension to their already large plant, which will be devoted to a malleable iron department. This will be an entirely new industry to Lancaster, and, while greatly increasing the company's business, will also give employment to an increased number of hands. The new plant will be in operation in a few weeks.

Middletown, Conn.—The brick walls for I. E. Palmer's new factory building, at the foot of Center Street, have been completed.

New Britain, Conn.—Many improvements are being made by the Humason & Beckley Mfg. Co. in the interior of their factory. New floors are being laid in some of the rooms and new machinery is being put in.

Ottawa, Ont.—The Ottawa Saw Works Co. have secured their old site and in all probability the company will rebuild and begin business anew on a much larger scale than before.

Quincy, Ill.—The J. D. Warren Mfg. Co., of Chicago, have taken a lease for four years of the Rogers building at Fourth and Oak Streets and will use it for the manufacture of Hardware specialties.

Recent Embarrassments.

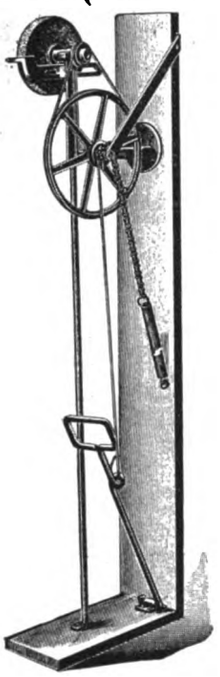
Canton, O.—The Princess Plow Co. has assigned to Homer V. Briggle. Assets, $10,000; liabilities not estimated.

Rockford, Ill.—The Rockford Tack Co. is bankrupt. A petition has been filed in the United States District Court at Chicago by Fredericka Rhoades and others to have the company declared insolvent. Mrs. Rhoades' claim is for $2,000 and there are others to a sufficient amount to cause the factory to close.

Muncie, Ind.—Titus Hutzel, Herman Hutzel, Robert Hutzel and Bert Casmire have asked in Circuit Court that a receiver be appointed for the Enterprise Stove Co.

New York, N. Y.—Justice O'Gorman of the Supreme Court has appointed Henry B. Ketcham temporary receiver for the Brainard-Tanner-Gallien Co., manufacturers of Hardware, with offices at 90 Chambers street and at 72 and 74 Church street, on application of Harry J. Brainard and William F. Tanner, composing a majority of the directors, for a voluntary dissolution of the corporation.

Recent Fires.



Rankin, Pa.—The Garland Chain Works have been destroyed by fire. Loss is 100,000. The fire was caused by the explosion of a tank of chemicals.

Shenandoah, Pa.—John Roberts' powder mill has been destroyed.

Young America, Ind.—The mill and handle factory owned and operated by Frank Speavy has been burned, involving a loss of $3,000, with but small insurance.

Utica, N. Y.—Utica Stove & Repair Co., 55 John Street.

Warren, O.—W. W. Morrison, 31 Market street.

Wilmington, Del.—The Eclipse Mfg. Co. has been incorporated. Manufacturing bicycles. Capital, $500,000. Incorporators: A. B. Stoughton, of Fort Washington; E. T. Kalas, of Morristown; W. J. Jackson, of Germantown, Pa.

Youngtown, O.—National American Co. will open a branch store.

Changes and Improvements.

Hartford, Conn.—The Columbia & Electric Vehicle Co. has transferred to the Electric Vehicle Co. the entire automobile works on the corner of Park and Laurel Streets. The transfer is simply the merging of the business of the Columbia Automobile Co., and the Columbia & Electric Vehicle Co., into the Electric Vehicle Co.

Harrisburg, Pa.—The Kline Cycle Co., Second and Walnut Streets, have purchased business of J. N. McCulloch, 12 North Market Square.

Le Roy, N. Y.—Post & Meacham have dissolved partnership.

New Haven, Conn.—An independent gas plant, the structure alone to cost $5,000, is soon to be erected by the Winchester Repeating Arms Co. It is to be as near fire proof as possible and will be composed principally of brick and iron, the floorings being of sheet iron and the walls of brick. The main part of the building will be 34x94 feet with a wing of 29x32 feet.

Naugatuck, Conn.—Stockton & Goodyear have retired from business.

New London, Conn.—Stadden & Holmes, dissolved; Chas. S. Holmes will continue business.

Racine, Wis.—The reconstruction of the plant of the Wisconsin Wheel Works, which was destroyed by fire June 7 last, is already under way; the officials expect to have it in operation and delivering bicycles on or about August 15th.

South Norwalk, Conn.—H. A. Saunders has discontinued business.

Red Key, Ind.—Williamson Bros. succeed C. W. Watson.

St. Mary's, O.—Jos. H. Kohler is succeeded by the Coaster Cycle Co.

Springfield, Mass.—The business of the Snow Cycle Chain Co., of Syracuse, N. Y., which was recently purchased by Crosby & Dana, proprietors of the Springfield Drop Forging Co., has been removed to this city and consolidated with the forging company.

Recent Embarrassments.

Baltimore, Md.—The Columbus Bicycle & Typewriter Co., at 24 East Gay Street, has been, upon the application of the Saudan Mfg. Co., placed by Judge Badger into the hands of a receiver.

Fort Wayne, Ind.—A. C. Katt; creditor in possession.

Haverhill, Mass.—F. H. Fernald, Washington Street, has made an assignment to Essex S. Abbott.

Milwaukee, Wis.—The Julius Andrae Cycle Co. have failed. Liabilities, $100,000.

New York, N. Y.—The Starr Wheel Co., dealers in bicycles and bicycle sundries, at Lexington Avenue and Twenty-third street, have made an assignment to Thomas L. McConchie without preference.

Staunton, Va.—Humphrey & Co. have assigned.

Recent Fires.

Ballston Spa, N. Y.—R. H. Mott & Bro., damaged by water; insured.

Bennington, Vt.—R. H. Mott & Co., stock damaged by fire.

Cleveland, O.—Fire has inflicted considerable damage on the Cleveland Cycle Fittings Co., 16 to 20 High Street. The conflagration was confined to the second floor, but smoke and water added to the loss, which amounted, including that on the building, to $5,000.

Lowell, Mass.—Duffy & McKenzie.

Lowell, Mass.—A. O. Austin, Paige Street. Loss about $250, not insured.

Lynn, Mass.—Jos. Soucey, Market Street, loss about $500.

New York.—S. M. Marcus, Sixty-third street and Madison avenue.

Ontario, N. Y.—Foley's repair shop, damage slight.

Pittsburg, Pa.—J. B. Kaercher, 439 Wood street, loss $2,000, covered by insurance.

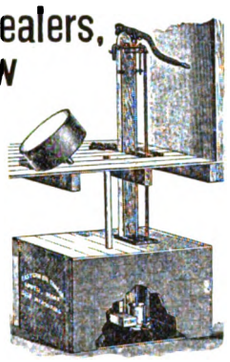
Reno, Nev.—T. A. Massey.

Sandusky, O.—Fire has totally destroyed the Standard Wheel Co.'s plant in this city. Sparks from an adjoining foundry probably caused the fire. The loss is estimated at $100,000.

York City, Pa.—Fire has damaged the building in which J. W. Richley has his bicycle repair shop. Almost a total loss.

Recent Burglaries.

Columbus, O.—Joseph Buff, 218 West Broad street.



Middletown, N. Y.—Worcester & Crans, James street.

New Haven, Conn.—Setlow Bros., State and Bradley Streets.

ALL THE NEWS. HARDWARE HARDWARE EXCLUSIVELY.

The name of the only Hardware Trade Journal in America with the motto "All the News; Hardware Exclusively."

It is published on the 10th and 25th of each month, which is as often as any dealer desires to receive a trade paper which he intends to read.

Has tabulated records of all new firms and companies and their various changes in the manufacturing line. All the new stores and business news among the jobbers and retailers of the country; with a Bicycle and Sporting Goods Record covering the changes daily occurring in that important line.

For the benefit of the retail dealer it has a "Prices Current" in every issue covering 32 columns of its pages. A careful consideration given to this department of the paper may save many dollars to its subscribers.

It offers to the advertisers advantages possessed by but few of its competitors in its legitimate field. In addition to foreign circulation, embracing 74 countries besides our own, it reaches within the limit of the United States every State and Territory, where trade and traffic have a foothold.

It has just completed its **twentieth** volume and is consequently in no experimental stage, waiting to establish a subscription list.

HARDWARE'S rate card is based on actual value. It is a paper for the Hardwareman, possessing the respect of the trade, the confidence of its patrons, the thanks of its subscribers and the courage of its convictions.

... PUBLISHED BY ...

THE HARDWARE PUBLISHING CO.,

275 Broadway, New York.

PRICE $1.00 PER YEAR FOR 24 ISSUES.

Digitized by Google

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

"A PROFITABLE MEDIUM TO ADVERTISERS."

Gilbert & Bennett Mfg. Co., Chicago and New York. [*Wire Goods*]: You have reason to be proud of HARDWARE's success both as a journal of interest and of usefulness to your readers, and as a profitable medium to the numerous advertisers. From the fact that our card has been steadily published in its columns from the first number, it must be concluded that we have found you a satisfactory medium.

"GIVE YOU YOUR MONEY'S WORTH."

Coldwell Lawn Mower Co., Newburgh, N. Y. [*Lawn Mowers*]: We think HARDWARE is enterprising, pushing, up-to-date, so to speak, and has a certain amount of get-up-and-get spirit about it, combined with a certain flavor of "I give you your money's worth when you advertise with us," that we like it—not for fun or sentiment, but for real business, and so long as you continue thusly you can count on our continuance.

"COULD NOT KEEP HOUSE WITHOUT IT."

Sickels, Preston & Nutting Co., Davenport. Iowa. [*Wholesale Hardware*]: We would not know how to keep house without HARDWARE. The review of the Hardware markets, trade reports and editorials are frequently read before letters are opened that are received in the same mail with HARDWARE.

"THE MOST HELPFUL AID."

Pike Mfg. Co., Pike Station, N. H. [*Whetstones, Oil Stones, etc.*]: We like to keep our name and our wares before the public in a modest way. We have found HARDWARE the most helpful aid toward accomplishing that purpose.

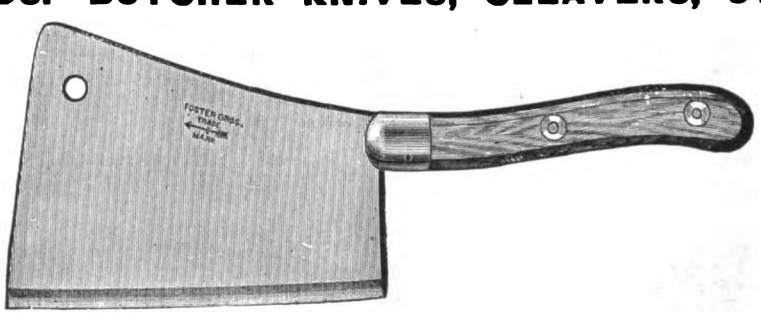
CHATILLON SPRING SCALES.

OUR attention having been called to the fact that inferior makes of Spring Scales are being sold to butchers as "Chattillon" Scales, we deem it due to the trade and to ourselves, in order to protect the merits of our Spring Scales, so well and favorably known for more than sixty years, to inform you that every Spring Scale manufactured by us

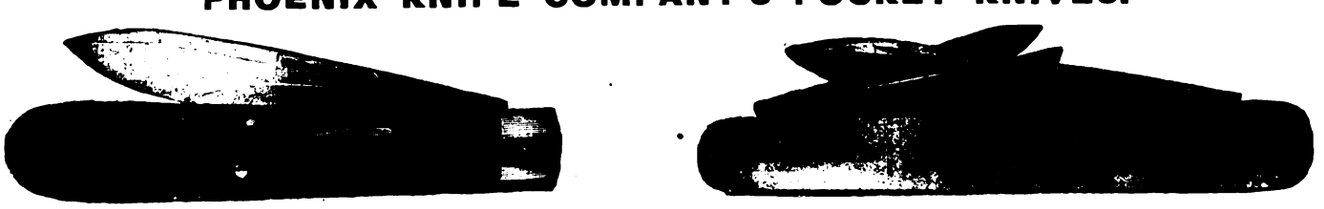


has our name as makers plainly on the dial, thus:

John Chatillon & Sons. Makers. New York. U.S.A.

and any scale without this name on the dial is NOT A GENUINE CHATILLON SCALE.

FOSTER BROS.' BUTCHER KNIVES, CLEAVERS, STEELS, ETC.



These Tools are recognized in the Markets, Packing Houses and Abattoirs throughout the United States as the standard of excellence, quality being the first consideration. We carry in stock every style and size of Knives, Cleavers and Steels used in cutting meat; also Knives for kitchen use in Hotels, Restaurants and for domestic purposes.

FRIEDERICH DICK'S MAGNET DIAMOND STEELS.

By careful workmanship and the use of a special steel in their manufacture THEY HAVE BECOME FAMOUS THROUGHOUT THE WORLD.

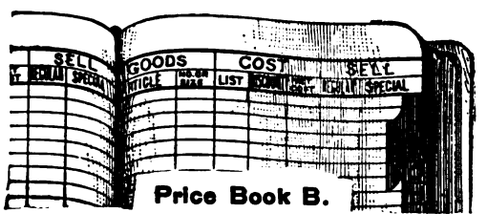
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

A



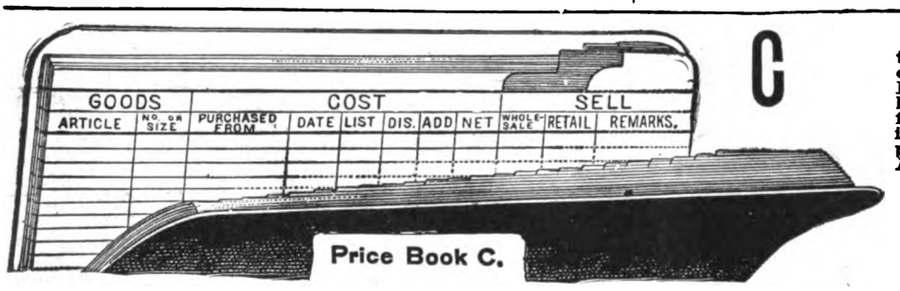
Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages,	$1.00	**A 2**, 400 pages,	$1.50
A F, 200 pages with flap,	1.25	**A F 2**, 400 pages with flap,	1.75

B



Price Book B.

In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

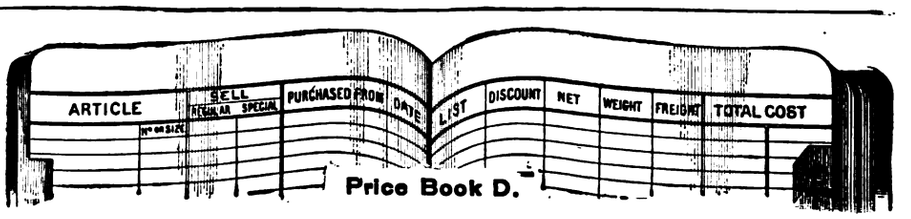
B, 200 pages,	$1.00	**B 2**, 400 pages,	$1.50
B F, 200 pages with flap,	1.25	**B F 2**, 400 pages with flap,	1.75

C

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4¼ x 7¼ inches.***

FOUR EDITIONS:



C, 200 pages,	$1.00
C F, 200 pages with flap,	1.25
C 2, 400 pages,	1.50
C F 2, 400 pages with flap,	1.75

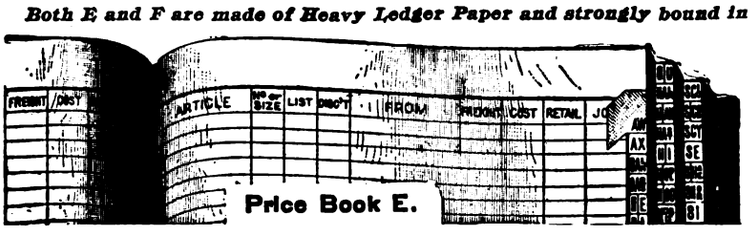
Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages,	$2.00
D F, 200 pages with flap,	2.50
D 2, 400 pages,	3.00
D F 2, 400 pages with flap,	3.50

D

Price Book D.



MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers,	turn to	AU	For Chisels,	turn to	CH$^{I}_{U}$	For Iron,	turn to IRO
" Parers, Apple	"	PA$^{P}_{R}$	" Cutlery,	"	CUT	" Irons,	" IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.

HARDWARE

At a meeting of the Board of Directors of the G. & H. Barnett Company, Philadelphia, on July 25th, called to fill vacancies caused by the death of their late president, Henry Barnett, the following officers were unanimously elected: Henry W. Scattergood, president and secretary; Alfred W. Barnett, vice-president and treasurer, and Geo. F. Barnett was chosen to fill the vacancy in the Board.

The Board of Education of the City of New York and the School Board of Newark, N. J., after a thorough investigation of its manifold merits, decided to adopt the Ogden automatically regulated door check and spring on all school buildings within their respective jurisdictions. As a further evidence of its successful introduction into modern office buildings, the architects of the Broadway Chambers, New York City, have ordered 125 of these Ogden door checks to make a perfect equipment for that world famed building.

The J. D. Warren Mfg. Co., Chicago, Ill., whose perfect methods of providing cabinet shelving for Hardware merchants is one of the greatest advanced movements of the industry, has recently published a large chart showing in a graphic and intelligent manner the application that is possible by employing their improved facilities in store construction. This is accomplished in 38 designs, showing varying sections adapted for the different branches of the business. Those in the trade contemplating changes of this important character should send for this chart to assist them in properly laying out their space to the best advantage. It may be had from J. D. Warren Mfg. Co. free of charge, upon application for the same.

The Laflin & Rand Powder Co., 99 Cedar Street, New York, have recently distributed an advertising novelty in the shape of a smokeless shell, which is so constructed that by turning the red side of the shell the heading appears, "The Loads That Win," and each leaf between the front and back covers gives a resume of the events in which their expert shot, John S. Fanning, has brought out Laflin & Rand Smokeless, giving an evidence of what it is capable of doing. On the last leaf is given the load that Mr. Fanning uses as an inanimate target load, and also his live bird load, which is important information for the sportsman. The covers of this advertising shell, one side being purple and the other red, are indicative of the two leading shells now on the market, the purple being the U. M. C. "Acme" and the red being the Winchester "Leader."

John J. Teeple, who for nine years has been the traveling representative of the Van Wagoner & Williams Hardware Co., has recently resigned his connection with that company, in order to accept the position of associate manager of the New York business of the Peck, Stow & Wilcox Co., succeeding to the lines of work formerly allotted to Winfield D. Walkley, now of H. D. Smith & Co. Mr. Teeple brings to his new departure an experience obtained through personal contact with the leading buyers of the country, which cannot prove otherwise than advantageous to him in his new environment. A hustler naturally, with the conscientious temperament of a practical salesman, the interests entrusted to his care by the old-established company with which he is now associated will be promoted by his efforts, for his friends in the trade their name is legion.

Thomas W. Munroe, New York store manager for the Allerton-Clarke Co., and the Arcade File Works, left for the Paris Exposition on July 25th by the *St. Louis*. As he was accompanied by Hobart B. Ives of the H. B. Ives Co., of New Haven, it is acknowledged by all their friends they will undoubtedly pass an agreeable vacation abroad and return in about five weeks refreshed and recuperated for the busy Fall season ahead.

E. Bertram Pike, secretary and treasurer of the Pike Mfg. Co., Pike Station, N. H., and 151 Chambers Street, New York, the leading American manufacturers of sharpening stones, returned August 1 on the *Oceanic*, having been abroad for three months in connection with the installation of their handsome exhibit, of national importance, at the Paris Exposition.

At the annual meeting of the Gilbert & Bennett Mfg. Co., held at Georgetown, Conn., on July 24th, the following directors were elected for the ensuing year: Edwin Gilbert, David H. Miller, Samuel J. Miller, Geo. H. Brown and Edward F. Jones. The directors subsequently elected the following officers: Edwin Gilbert, president and treasurer; David H. Miller, vice-president and secretary, and Samuel J. Miller, superintendent.

Underhill, Clinch & Co., 94-96 Chambers Street, New York, have just been appointed as direct representatives of the Miller Lock Co., Philadelphia, Pa., for Greater New York and its nearby territory. It is their intention to carry a full stock of the goods, and in their new sample rooms a fine exhibition of samples can be made. The Miller Lock Co. have never before had such energetic representation in this city as this progressive firm can give them; and for the first time a full and complete display of their high-grade products will be a feature of the agency that cannot do otherwise than add largely to future sales.

A complete reorganization of the Atlas Tack Co., Taunton, Mass., has just been made. The new company, which has been incorporated under the laws of New Jersey, has a capitalization of $700,000. At a meeting held in New York city on the 25th ult., the following directors were elected: H. H. Rogers, H. H. Rogers, Jr., U. H. Broughton, John Bushnell and G. W. Weymouth. The officers of the company are named as follows: G. W. Weymouth, president and general manager; U. H. Broughton, secretary and treasurer, and H. A. Holden, assistant secretary and treasurer. The various plants will continue in operation as at present, as the prospects for a prosperous future were never so good.

The Venezuelan Government has taken steps for the collection of specimens and material for its exhibit at the Pan-American Exposition in Buffalo in 1901. A Central Board of Directors, with residence in Caracas, has been named. The chairman of this board is the Minister of Public Works. He is assisted by two vice-presidents, a treasurer, a recording and a corresponding secretary. The Central Board of Directors will appoint a board in the capital of each State. These in turn will appoint subordinate boards in the districts within their jurisdiction. The Central Board shall take charge of the specimens and other objects which go to form the exhibit of the Republic.

HARDWARE

VOL. XXI. AUGUST 10, 1900. NO. 9.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 275 BROADWAY, NEW YORK.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

L. E. MITCHELL, - - President.
A. P. MITCHELL, - - - Secretary and Treasurer.
W. C. BRUNDAGE, - - Business Manager.
HENRY HOPKINS, - - Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

Editorial Trade Review.

Midsummer dullness properly characterizes the present commercial conditions in Hardware centres of trade. With a large portion of the forces from whom hard work is to be expected, at present enjoying well-earned vacations, and most of the principals taking a few days off at a time, spending the same with their families at some Summer resort within reach, there is little or no indication of that season of great activity which is anticipated on every hand to prove the feature of the Fall trade.

Orders have already been prepared to cover the probable wants of a season's business, but the buyers have been warily watching the gradual recession of quotations so strenuously insisted upon a month or more ago, and with a natural desire to buy at the lowest ebb, are waiting for still further inducements before booking their wants.

It would seem as though the market conditions were as faithfully studied by the manufacturers and their representatives, for with nearly every weakening in the prices of the raw material, with the necessary buying for current demands, changes are made in previous ruling quotations for the purpose of stimulating orders which are still withheld.

Many goods, it is conceded, have reached prices low enough by comparison with 1898 quotations to urge the desirability of ordering them, even with a clause guaranteeing against further decline previous to an early delivery. Orders just for sorting up depleted stocks are freely given as the days go by, but stock orders in any volume of customary fullness await a conservative decision regarding the trend of the markets of the immediate future.

The retailers are holding themselves well in hand, even under the special inducements offered by the jobbers where their wholesale stocks are heavy enough to encourage a cut in prices.

The present conditions favor an extension of the export trade now so hopefully cultivated by the large producers, and as important movements of stocks suitable for a foreign demand are being made almost daily under these most favorable auspices, less fear is experienced as to the outcome of the present dullness in home requirements.

The reports from the travelers for manufacturers now on the road are favorable in the main as to a good Fall trade. Some impossible-to-meet demands from the buyers occasionally disturb them, but these simply indicate the waiting market so long prevailing and which is now getting in shape for business.

Crop conditions in the West are showing up more favorably for the producers than was at first supposed would prove to be the case, and excepting North and South Dakota and some parts of Minnesota, the chances are extremely good for valuable crops to favorably impress the traders in these prosperous sections.

Opinions seem to vary in regard to the advantages of holding some prices at the maximum rate prevailing; some old-time buyers of experience would prefer the entire drop to take place at once in the manner of the "Steel and Wire Co." in April; others would prefer—their own stocks being heavy in some lines—that prices should be fairly maintained in a line with earlier discount sheets for fear of scaring the trade into a hand to mouth plan of purchasing, which would make the jobbers carry the stocks, while the retailers ran no great risk having stocks too light to speculate upon. It has always been found hard work to keep purchasers in line on a declining market.

To Cancel or Not to Cancel.

This must be a trying time to those merchants who, having been compelled to give orders for stock or supplies away ahead of their immediate requirements, find themselves with unfilled orders out for many thousands of dollars' worth of goods or material, the prices for which have now reached a lower level.

Of course, when the market prices went steadily upward after placing the orders, it seemed as though the buyer possessed a wise head, and could look for nothing less than a fine profit on his sagacity in anticipating the trend of the markets. This was the case, no doubt, on the six months' sales for which the orders were given, but the liberal belief in a future when high prices would rule for the entire year, finds the dealer with goods yet to come on which, by comparison with present bids, a loss is certain.

What is the first thing many are apt to attempt? Find a flaw in the contract of terms of delivery that will cancel the unfilled portion; or endeavor to discover a difference in the finish or quality which, in the hurry of urgent demands, may have occurred through rushed deliveries. But the obdurate manufacturer doing his share of the work with materials bought at top-notch prices to cover these very orders, continues to deliver the goods delayed in transmission until orders are completed, while the merchant feels heartsick at the prospect.

The dealer doesn't remember that the manufacturer, filled up with his largely augmented orders, was prevented from making sales in other directions equally as desirable and certainly as profitable. And this makes him less of a humanitarian in regard to letting up on the dealer who was persistent in getting as large an order entered as the manufacturer would agree to entertain.

Perhaps the fear of orders being cancelled has kept some manufacturers' prices out of harmony with the quotations on raw material. In order to fill these very orders stock was bought on which a loss could readily be reckoned unless the orders were filled at the prices at

Digitized by Google

which they were booked; and until they are filled, previous prices will be maintained.

There are few greater evils presented to a manufacturer in his methods of doing business than the unexpected cancellation of all contracts that approach unprofitableness. One would think that buyers who make a practice of doing this would soon be unable to get quotations on which they would be willing to purchase their stocks; surely the fact that they are not to be relied upon in taking all the goods they have ordered would militate greatly to their disadvantage when entering the market as a prospective buyer.

On a rising market, every buyer becomes the possessor of an extremely wise head, and orders more goods than he has any idea he can sell, judging by his previous purchases; but the temptation to gamble on the future chance of cutting the prices has the effect of loading him up, or forcing him to cancel unfilled balances the moment the current of cost runs against him.

Commercial morality would seem to be at a low ebb when a question arises as to the delivery of goods purchased at a price above the market of to-day and yet below the current quotations when entered on date of purchase. At a time like the present, when daily concessions affect undelivered balances of contracts unfavorably, it should certainly be to the merchant's credit that he is able to stand up like a man and swallow his medicine even though a little bitter.

"Comstock's" Philosophy.

From his rostrum at the Corbin works, New Britain, Conn., "The Man in the Corner" every month endeavors to add to the happiness of the world. The following is the latest:

A few days ago I accosted a fellow Corbinite with, "Well, how is the world using you?"

"My friend," said he, "the world is not using me at all. I am not so poor a thing as to let it use me. It is I who am using the world, and I am using it well."

I suspect that somewhere hereabouts lies the secret of success. It is the man who uses the world—who has that in him which enables him to overcome difficulties and turn them to account—who achieves prominence and makes for himself a place and a name. The most of the biographies of successful men are histories of life-long struggles to achieve ideals, and of triumphs over intervening obstacles in making the world serve their turn. At the heart of every great enterprise, at the foundation of every important departure from beaten paths of thought or research, at the head of every powerful commercial establishment there is to be found a man, keen and alert, with a single purpose so firmly fixed as to be the ruling motive of his life, and not to be swerved from it by untoward circumstances or unfavorable conditions. The men whose names are household words with us began life with empty hands and an unflinching determination to succeed, and have made events their servants instead of their masters.

It is said that any American of average attainments who cares enough about it can become wealthy. I presume that this is in a large measure true, and that the reason why so many of us are content with a fair amount of comfort and a slight margin between income and outgo is that we are too fearful to take the risk of a venture, or lack definiteness of aim. Inquiries recently made of a large class of young men in one of our Eastern colleges developed the fact that only one member in ten had a vocation chosen or was working to any clearly defined end. If this is a fair example of what is to be found on the training ground for careers, it is safe to presume that no better conditions prevail elsewhere. Thus nine-tenths of us are creatures of our environment, to whom the question, "How is the world using you?" is especially pertinent, and the other tenth makes its own destinies and rules ours as well.

Development of Our Manufacturing Industries.

The development of the manufacturing industries of the United States during the past decade, and especially during the second half of the decade, is illustrated by the completed figures of the Treasury Bureau of Statistics, showing the imports of manufacturers' materials and exports of finished manufactures in the fiscal years 1890, 1895, and 1900. From 1890 to 1895 importations of manufacturers' materials increased $9,047,231, and from 1895 to 1900 they increased $114,781,363. From 1890 to 1895, the exports of manufactures increased $32,493,367; from 1895 to 1900, they increased $248,688,623. Manufacturers' materials formed in 1890 23.06 per cent. of the total imports; in 1895, 25.64 per cent., and in 1900, 35.57 per cent.; finished manufactures formed in 1890 17.87 per cent. of the exports; in 1895, 23.14 per cent.; and in 1900, 31.54 per cent.

The table which follows presents the figures for each of the periods named:

	Manufacturers' materials imported.		Manufactures exported.	
Fiscal year.	Dollars.	Per cent of total imports.	Dollars.	Per cent of total exports.
1890.....	178,435,512	23.06	151,102,376	17.81
1895.....	187,482,743	25.64	183,595,743	23.14
1900.....	302,264,106	35.57	432,284,366	31.54

The following table shows the exportations of principal manufactures, arranged in the order of magnitude in the fiscal year 1900, including all whose value in that year exceeded $1,000,000, and compares the exports of 1900 with those of 1895 and 1890:

Articles exported from the United States.	1890. Dollars.	1895. Dollars.	1900. Dollars.

Wool manufactures	437,479	670,226	1,263,602

New Words in the Language of Business.

Imagine a business man of a hundred years ago transported to the present time, and attempting to read down the "want" columns of a modern newspaper. The motorman, the conductor, the district manager, the telegraph operator, the telephone girl, the elevator boy, the electrician, the lineman, the typewriter, the stenographer, the engineer—would convey no idea to his mind of the requirements and duties of the situations wanted. Fancy his inability to comprehend the shipping news, the commercial items, with the hosts of new words which modern transportation has introduced, such as the steamboat, the railroad, the express train, the freight train, the grain elevator. The gentleman of the olden time, who might have been a power in his financial world, could go to school to his nine-year-old great-grandchild with advantage, for an understanding of the most simple terms of commerce and trade.—*Exchange.*

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—Some time ago I bought a ticket on a sleeping car from Detroit to New York. When I took my vest off there was $500 in the inside pocket and when I woke up in the morning it was gone. Please inform me if the company is liable or not.

REPLY.—According to the better authority sleeping car companies are not insurers of the baggage or other personal effects of the passengers, and the Courts have generally refused to impose upon them the absolute liability of inn keepers and common carriers of goods. The car company is, however, not relieved totally from responsibility, but their liability rests upon the ground of negligence. A sleeping car company is bound to maintain a reasonable watch during the night while the passengers are asleep, and if it fails in this or is negligent in the maintenance of a proper watch it may be held liable for the natural and probable consequences of its negligence.

QUESTION.—I live in New Jersey in a leased house. The well on the premises has lately run dry and I am compelled to buy water. The landlord refuses to dig the well any deeper. What are my legal rights? Isn't it a landlord's duty to provide water for his tenants under such conditions? No one would hire a house with a well likely to run dry and leave him without water. S. M.

REPLY.—We are of the opinion that you have no damages against the landlord. In the absence of some express contract or covenant on the part of the landlord to the effect that the property is fit for the purpose for which it is leased the lessee takes the property as he finds it (Clifton vs. Montague, 33 L. R. A. 449) and without an express covenant, the lessee cannot be held liable for repairs, nor can he be compelled to remove any nuisance unless caused by his own act or he has covenanted to that effect. On page 347, Vol. 1, of Washburn on Real Property, the author in stating the rule says: "A case affording a further illustration of this point was one where a canal company made a lease of a water power which had been created by the construction of the canal. It was held not to constitute a covenant on the part of the lessors to keep the canal in repair or supply it with water and if the canal was discontinued the lessee was without remedy, so the lease of a water power out of a mill pond there existing was not held to constitute an obligation on the part of the lessor to keep the dam in repair and the grant of a right to take water from a well does not bind the owner of the well to repair it."

QUESTION.—If a firm agrees to the terms of a letter sent and acknowledges the same in a letter written in reply, does the contract so made by these two letters require an internal revenue stamp?

REPLY.—The Internal Revenue law provides that certain instruments, such as deeds, mortgages, bills of sale, and others which are mentioned in the act shall be stamped. As to contracts, the decisions seem to hold that where a contract or any instrument which does, under the revenue law, require no stamp, is acknowledged before a notary public, the acknowledgment or certificate of the notary public should be stamped. The decisions as to which instruments should be stamped and which should not are not over clear nor are they very definite. We would therefore advise you, as a matter of caution and to guard against the effect of a decision holding a stamp to be necessary in such a case, to place a ten cent revenue stamp upon the letter which constitutes the contract and cancel the same.

QUESTION.—Some time ago I went on a bond for a friend whereby I agreed to indemnify A from any loss he might sustain through my friend's failure to perform the contract which my friend had with A. I have since been informed that A is about to assign this contract, together with the bond, to B. I should like to know, 1st: Whether I can withdraw from this bond? and 2d: Whether B could enforce this bond against me, since I agreed to indemnify A and not B?

REPLY.—If you entered into a valid bond to indemnify A against loss you could not withdraw from this bond at pleasure. You could withdraw if A consented to your withdrawal or if the contract in question had expired and ceased to exist or differed as to his bond. If, however, the contract itself was not in any way changed by A's assignment to B, you would not be released from your indemnity as to B until the expiration of the contract. Second: The rule in New York seems to be that if B could enforce the contract against your friend, he would also have the right to enforce the bond against you. (Chaflin v. Orstrom, 40 N. Y., 180.) If, on the other hand, the contract was changed in any way and your obligation varied without your consent, you would be released from your liability as bondsman.

QUESTION.—A short time ago, for the consideration of one dollar, I transferred my fixtures and stock in trade to my wife by giving her a bill of sale, which she at once recorded. Two weeks after this I was served with a summons in a suit brought on a promissory note not over a year old. The judge decided the case against me. Can the sheriff or marshal levy on the stock and fixtures just described? I am managing the business, but I own nothing at the present time.

REPLY.—If you gave a bill of sale of your property for a valuable consideration and without the intention of defrauding your creditors, the sheriff would not be allowed to attach this property. As the property stands at present he would have no right to levy upon the goods in question. The creditor could begin an action against you, and if he could prove that this bill of sale was given by you to defraud your creditors, the bill of sale would be canceled and the sheriff could then levy upon the goods. If the bill of sale were given within the last four months your creditor would have a right to force you into involuntary bankruptcy if he wished to do so.

A Trip to the Market.

It is almost indispensable to the highest success of the retail merchant, no matter where his store is located or of what dimensions it may be, to occasionally visit the market himself. He can buy of the traveling salesman, it is true, and post himself more or less satisfactorily from the trade journal; but after all there are ideas to be gotten only in the great centers of trade. A survey of the huge stocks of the wholesale houses not only affords him an opportunity to pick up some bargains which would never suggest themselves to him otherwise, but gives him a knowledge of styles, qualities, etc., that cannot but be beneficial. It is a great advantage to have a practically limitless variety from which to choose, too. When, in addition to the foregoing, one considers the object lessons to be observed in the retail quarters of the large cities, the windows, the display of stock and the use of the latest and most effective methods in conducting business, the educational advantages of a trip to the market must be very patent to him. There is no better way to get one's self out of the old rut.

As to Successful Advertising.

A stupid boy, or even an educated dog can carry a stick or convey a message, but to sell goods requires intelligent representation. In other words, says an expert, and truly, almost anybody can write an advertisement, but successful advertising depends very largely upon the writer's ability to inspire confidence and favorable recognition on the part of intended purchasers, without which an advertisement must of necessity prove "stale, flat and unprofitable."

The body of a dead Chinaman is often kept in his late home for three or four years before burial.

ITEMS OF INTEREST FROM EVERYWHERE.

The little island of Iceland, with about 70,000 inhabitants, has the same number of newspapers as the great Empire of China.

The International Silver Co., Meriden, Conn., recently received a $4000 order for a sterling silver service to be presented to the cruiser *Albany* by the citizens of Albany, N. Y.

The year 47 B. C. was the longest year on record. By order of Julius Cæsar it contained 445 days. The additional days were put in to make the seasons conform as nearly as possible with the solar year.

A new foundry and machine shop are being built in Newark, N. J.. by the John Simmons Co., New York City, The plant will be used in the manufacture of soil pipe and fittings, plumbers' castings, etc. The new plant will be capable of a production of 100 tons daily.

According to figures being prepared by the statisticians of the Municipal Board of Health, the population of New York City is estimated at 3,654,594. The population is distributed through the five boroughs of which the city is composed as follows: Manhattan, 2,007,741; Bronx, 174,370; Brooklyn 1,267,158; Queens, 136,559; Richmond, 69,266; total, 3,654,594.

A thousand paper bags could formerly be made in 6 hours and 30 minutes by hand; they are now made in 40 minutes with the aid of a machine. To rule 100 reams of paper on both sides by hand required 4,800 hours; with a ruling machine the work is done in 2 hours and 30 minutes of one man's time. In shelling corn by hand 66 hours and 40 minutes would be required to shell a quantity which can be handled by a machine in 36 minutes.

In all India, Madras is the only city where electricity is used as a power for street railroads. Bombay's tramways are run by horsepower, and the city is lighted by gas. Electricity is used only in a limited way; in some of the better houses and bungalows and on an occasional fete or holiday, a public park may be lighted by a portable electric plant. The general merchant and dealer is not sufficiently acquainted with electric manufactures to make a successful agent, and besides the demand for goods of this line is quite limited.

The first railroad in Brazil was opened for traffic in 1856. It ran from the head of Rio Bay to the foot of the mountain range upon the crest of which is the summer capital—Petropolis. It is now part of the Leopoldina, and has been extended up the mountain to and through Petropolis. It was called the Maua Railway, in honor of its promoter—Evangenista de Souza, Viscount Maua—to whom the distinction of being the pioneer of Brazilian railroad-building belongs. The enterprise was private, and no subvention was given by the Government.

The telephonograph is a new invention which comes to us from Denmark. Not quite for the first time, for we had heard of it about a year ago; since then, though, the inventors have made progress. The telephonograph is a combination of the telephone with a newly constructed phonograph, which makes it possible to fix and preserve conversations in the absence of the intended hearer, so that he can listen to the message after his return. But the importance of the invention reaches much further. Through the use of magnetophonography it is possible to multiply the effect of the sound and to give the sound greater force.

An Italian electrician has invented an electric cartridge, which he offers as a substitute for dynamite and smokeless powder in mines, rock blasting, and for heavy ordnance. The composition used in the cartridge is made up of carbonates of potash and chloride of ammonia, the proportion varying according to use. The discharge is effected by an electric spark, which produces electrolytic effects upon the chemicals. The inventor claims that the cartridges, until subjected to the effect of electricity, are entirely inoffensive and perfectly safe, so that there will be no necessity for isolating the magazines where they are stored.

There is on exhibition at the Birmingham (Eng.) Art Gallery at the present time an unusually interesting and valuable collection of artistic productions in steelware. The lock and key from the door of the infamous Star Chamber is one of the exhibits, and, apart from its historic interest, the key is noteworthy as a superb specimen of seventeenth century work. The lock is cased in brass, has an engraved front, and is provided with two richly modelled handles. The keys of Windsor Castle, dating from about 1689, are also shown. These are delicate examples of English work, and bear the initials of William and Mary, the then reigning monarchs. Another attractive object is a fine etched bright-steel helmet which formed part of the armor of the Earl of Essex. The collection is quite cosmopolitan in character, however, and includes old Italian swords, French door knockers, a steel casket once the property of the Medici family, Neapolitan dueling daggers, a massive carved steel horse's bit of Italian manufacture, and many other curios rich in historical associations.

Writing of the sale of tinware, tools, and machines in China our Consul says: "There is practically no opening for this class of goods in China. Cheap unglazed earthenware in a great measure takes the place of tinware in other countries. The tin that is used for small household articles is made up by hand, with the aid of a pair of shears and a soldering iron. Of course, there is a considerable amount of sheet tin imported, and the thousands of kerosene tins that pass through the hands of the hawkers also find their way to the tin shops. There is no canning industry among the Chinese. All of their sauces and compotes are preserved in earthenware jars, or in old wine and beer bottles. What tools they have are very crude and are made locally at a small price, and there are no shops that make a business of dealing specially in them. The time has not yet arrived when foreign tools of any class can be introduced among the Chinese. Within the last year, an American firm made a shipment to Hongkong embracing a complete assortment of modern tools. They were accompanied by a representative. After coming here and testing the market in an intelligent way, he gave up the enterprise and reshipped all his tools to the United States. As I said before, as long as labor remains at 10 cents a day, stones will be quarried, timber sawed, bricks made, piles driven, and goods transported by hand. Machinery at present cannot compete with cheap labor, and the only tools that gain a footing on this coast are those of warfare, and even these are of the cheapest kind."

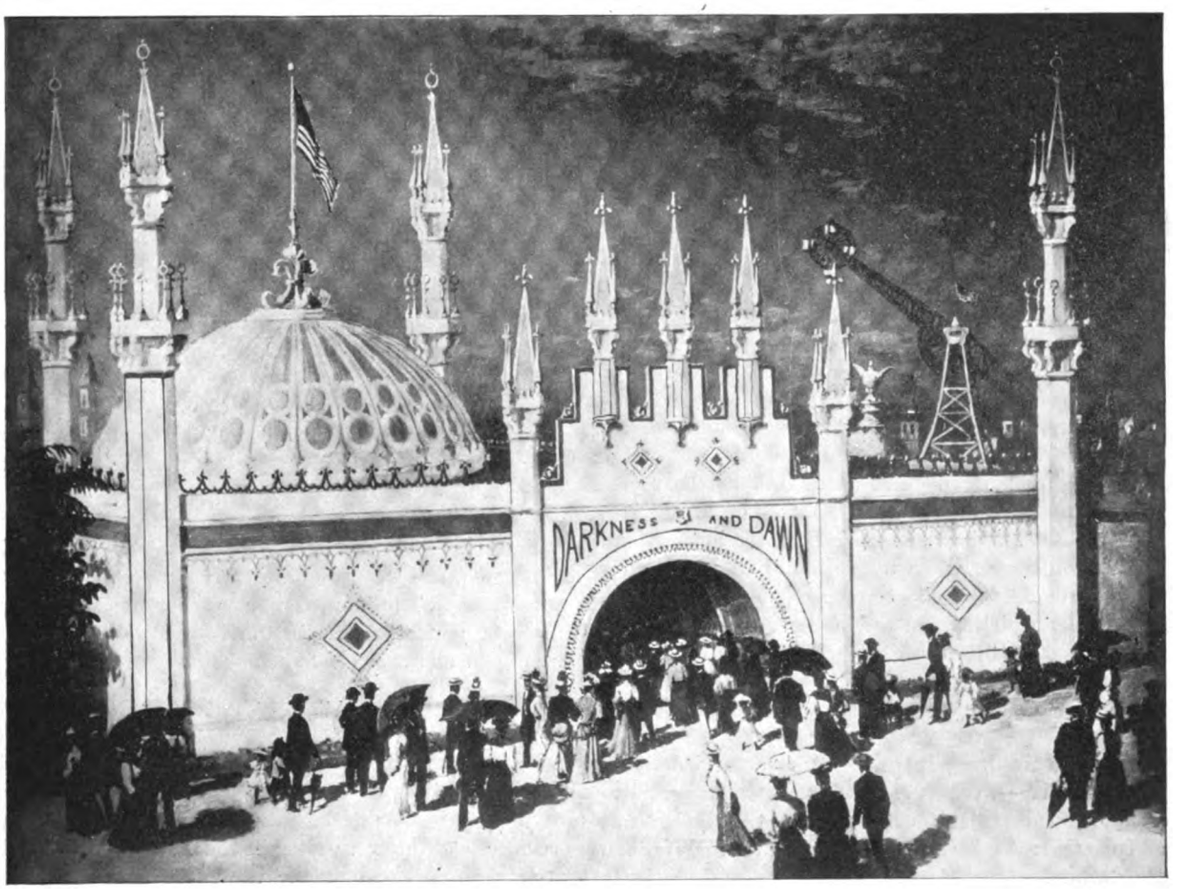
THE PAN AMERICAN EXPOSITION, 1901.

"A TRIP TO THE MOON."

ONE OF THE MIDWAY ILLUSIONS THAT WILL EXCITE WONDER AND INTEREST.

The Midway at the Pan-American Exposition in Buffalo in 1901, will be over half a mile long, giving a mile or more of frontage for the wonderful variety of novel entertainments there to be presented. It will outrival in interest and extent anything ever created in this line. It will include some of the best of standard attractions, vastly improved, and a strong array of new ones fresh from the fertile brain of the inventor and artificer. It will be a display of ingenuity impossible to anticipate by any process of extravagant reasoning or guessing. Who but a professional of ripe experience could have planned "A Trip to the Moon?" The voyager is directed to go aboard the airship *Luna,* moored at a convenient landing. It is night, and the heavens sparkle with a myriad of stars. When all is ready the cables are thrown off and the ship rises steadily to a height of about two miles. The air is clear, and you can see the many lights on earth below. We now pass eastward over Rochester, Albany and then southward over New York. The earth now falls rapidly behind. We are going at a terrific velocity, as noted by the resistance of the air which seems to blow hard in our faces. The earth becomes a large ball and the moon grows larger. We are fast nearing the satellite, and soon find the ship moored to a landing in the moon. Guides receive us and show us to the palace of the Man in the Moon. His Majesty receives the party, bidding them welcome and accords them the freedom of his domains. We are then shown about the splendid palace and through the streets of the City of the Moon. The ladies are especially interested in the show windows of the Moon shops. The trip may be made with entire safety, and the return to earth leaves one with the remembrance of having passed through a wonderful experience.

"A TRIP TO THE MOON."—ONE OF THE MIDWAY ILLUSIONS THAT WILL EXCITE WONDER AND INTEREST.



"DARKNESS AND DAWN."

A WEIRD AND FASCINATING FEATURE OF THE MIDWAY AT THE PAN-AMERICAN EXPOSITION.

"Darkness and Dawn," which is to be one of the features of the Midway at the Pan-American Exposition in Buffalo next year, is a presentation of Dante's Inferno. It is remarkably realistic, with enough of comedy to relieve the gruesomeness that otherwise might jar sensitive natures. The visitor is taken in hand by guides and conducted to an elevator by which he seems to go down, down into hopeless darkness. As he steps from the cage he finds himself in a cool retreat with jovial companions, such as a living skeleton, a widow in her weeds, an undertaker or two. It is the threshold of the place which good people expect to avoid in

Digitized by Google

the hereafter. The visitor, under the protection of guides, is assured of safety. He is led through a series of corridors and grottos, along burning lakes and other devices of torture, where he may witness the punishment of those who juggle with the truth, who borrow umbrellas and neglect to return them, who gossip about their neighbors and who otherwise trespass on the rights of others. The lesson is a salutary one. Presently the scenes of purgatory are passed and the visitor comes to the "Grotto of Dawn," where maidens are dancing and singing and wonderful illusions greet the eye. The music and brilliant scenes form a happy ending of the journey. After tarrying a few moments in the grotto the visitor returns once more to the realm of every-day life.

"DARKNESS AND DAWN."—A WEIRD AND FASCINATING FEATURE OF THE MIDWAY AT THE PAN-AMERICAN EXPOSITION.

Meaning of Some of the Commoner Electrical Terms.

People who are not actively engaged in electrical work are becoming familiar with the names of the common electrical units, volt, ampere, ohm, and watt, but few of them have any idea of what these words mean. A simple analogy may be of assistance to them. Imagine a pipe carrying a stream of water—an ordinary service pipe from a street main entering a house, for example. If water is flowing through it its analogy to a wire carrying a current of electricity is quite close. The pressure of the water is measured in pounds per square inch. The corresponding pressure or electro-motive force, which forces the electric current through the wire, is measured in volts. The rate of flow of the water in the pipe is measured in gallons per minute; the electrical flow is measured in precisely corresponding units called amperes. Suppose, with a given pressure on the pipe, its area of cross section is made smaller or its length larger, or it is roughened inside, less water will flow through it, or we may say its resistance is increased. This property of all substances and objects which conduct electricity—resistance—is of great importance. It is measured in units called ohms. To illustrate these units practically, an ordinary cell or battery, wet or dry, such as is used with electric bells, keeps up a pressure of about one and one-half volts on wires connected with it. The current used in ringing an electric doorbell is about one-tenth of an ampere. The resistance of iron telegraph wire is about twenty ohms per mile for the ordinary size. Whenever a current of an ampere passes under a pressure of one volt it does one watt of work. The watt is an exceedingly useful unit; it represents work done at a given rate of power, and it is the connecting unit between electrical and mechanical measurements. It represents work equal to lifting three-quarters of a pound one foot in one second. A sixteen-candle power lamp uses about fifty watts. A fan motor of the usual kind requires about eighty watts, both taking current from mains kept at a pressure of 125 volts in New York city. Larger powers are expressed in kilowatts, a kilowatt being 1,000 watts, and equivalent to about one and one-third horse-power. All these units are named for famous electricians; the ohm in recognition of Dr. George Francis Ohm, a Danish physician, who discovered the laws of electrical resistance. The volt is named after Alessandro Volta, who invented the electric battery just a century ago this year. The ampere commemorates the name of Andre Marie Ampere, a French electrician, who did brilliant work in the early years of the nineteenth century, and the watt is named for James Watt, the man who made the steam engine practical.—*American Exporter.*

The statistics of German emigration for 1899 show that 23,740 persons left the country to cross the ocean. There has been a great falling off in emigration since 1894, when there were 120,089 German emigrants. The decrease is due to the commercial and industrial prosperity of Germany and to the care taken by the State for the welfare of the working classes. Out of the 23,740 German emigrants, 19,016 went to the United States in 1899, and 1089 sailed from Bremen for Brazil, against 629 in 1898. The increase is due to the concession obtained by the Hanseatic Colonization Society.

Indiana Retail Hardware Dealers' Association.

The fourth semi-annual meeting of the Indiana Retail Hardware Dealers' Association opened Wednesday morning, August 1st, in the parlors of the Grand Hotel, Indianapolis, with President W. H. Weed, of Vincennes, in the chair.

Upon calling the meeting to order, at 10.30, the roll call followed, fifty members being present. The reading of the minutes of the last regular meeting was next in order, and this was followed by the report of the secretary-treasurer, W. W. Robb, of New Harmony. Mr. Robb, in consequence of too much pressure of business matters, was compelled to tender his resignation, which was accepted with regret, and the selection of a new secretary was deferred until the afternoon session.

Several invitations were received from Indianapolis manufacturers, extending to the delegates the hospitality of their establishments, and other forms of entertainment during the stay of the association.

WEDNESDAY AFTERNOON SESSION.

The Wednesday afternoon session was called to order at 1.30. It was decided to permit the trade press to take down the discussion, subject to the revision of the press committee. Messrs. W. P. Lewis, Comstock and Bowen were chosen as a press committee.

The election of the secretary following, M. L. Corey, of Argos, was unanimously elected. Mr. Corey accepted this office, returning his sincere thanks to the associated members for their confidence in his ability, and made a very pretty little speech, urging harmony and hard work as the prerequisites for a successful organization. A vote of thanks was given to W. W. Robb, the retiring secretary, for his services.

The Association concurred in the action of their delegates to the Inter-State Association conference held in Chicago, March 12th, under which action the Indiana Association became members of the Inter-State Association. A committee of three was next appointed on the revision of the constitution, the committee consisting of Messrs. Pugh, Fulton and Bush.

Some discussion resulting in regard to free rural delivery contemplated by the parcels-post bill before Congress, as to its effect upon local trade if carried out, a resolution was moved and carried: As individual members of the Indiana Retail Hardware Dealers' Association, each should write a letter to his congressman, asking him to oppose this bill. After discussing the parcels-post and free delivery bill above referred to to some considerable extent, the meeting adjourned at 3.40 P. M.

WEDNESDAY EVENING SESSION.

The evening session of the Association convened in the parlors of the Grand Hotel at 8.15, President Weed calling the meeting to order, and motion was passed that representatives of the manufacturers who were present should be invited to participate. W. C. Kelly, of the Kelly Axe Mfg. Co., Alexandria, Ind., made a short address having reference to their goods being sold by catalogue houses. Mr. Clark, of E. C. Atkins & Co., was also called upon and made an informal speech on the same subject, and M. L. Corey, of Argos, also had something of interest to say upon the subject, and he was followed by Mr. Lewis. The discussion proved of considerable interest, and was participated in by a number of delegates. The meeting adjourned at 9.20.

THURSDAY MORNING SESSION.

President Weed called the meeting to order at 9.15, and referring to the invitation extended by E. C. Atkins & Co. for a trolley ride to be participated in by the members, as a large number had already stated their intention of attending this ride, on motion of Secretary Robb the Association accepted the invitation as a body.

Considerable business of an executive character was participated in and finished, including the appointment of a committee of five to make arrangements for holding the next annual meeting of the Association at Indianapolis; also a committee of three to arrange for a programme and necessary appointments for the forthcoming meeting of the Association in February.

The committee appointed to revise the constitution and by-laws then reported through Mr. Bush, the chairman. The results of their labors having been read were passed upon affirmatively and adopted. Motion was made and carried that on and after February, 1901, the annual dues should be $4. M. F. Lewis, C. F. Boonshot and W. H. Gordon, of the committee on resolutions, then presented the following resolution, which was carried:

Resolved, That the Indiana Retail Hardware Dealers' Association are opposed to the passage of the Pettigrew post and parcel bill, as it could benefit but a small class, and would be detrimental to the business of the people generally, and that the secretary be instructed to send a copy to each senator and congressman, asking them to vote for the defeat of this bill.

The Question Box was next opened, and the usual subjects for discussion taken from it, covering a number of points of interest to the members present, which aroused more or less discussion.

A motion was passed, thanking the manufacturers who had so liberally entertained them, including E. C. Atkins & Co., the Estate of P. D. Beckwith, and others.

The question of increasing the Association's membership was thoroughly discussed, the decision being that a good canvasser for members should be secured to go through the State, it having been ascertained that this was the most economical method of securing the same.

The meeting adjourned at 12.30 P. M., having enjoyed the semi-annual convention with a greater degree of interest than usual, and from which they might reasonably anticipate a more complete organization, more thorough work for mutual interests, and a success in the future well deserved by the intelligent efforts made to achieve it.

Nothing to Learn.

When a retailer takes the ground that there is nothing to learn, write it down that there is a retailer that is a failure. His methods of doing business will not stand the test of experience, continues a writer in the *Trade Review*. Whenever you find a retailer who is seeking information, who is interested in new methods as he finds them, who believes in doing business on a better basis this year than he did last year, write it down that there is a retailer who is competent by instinct and that he will grow.

The spirit of economy that says one dollar a year is too much to pay for a well-ordered, thorough trade paper, is that kind of economy that at the same time speaks out the narrowness of the retailer who says it and tells of his incompetency as a retailer. Do not misunderstand. We are not contending here for the reading of a trade paper for selfish purposes; we are drawing the legitimate conclusion that if a retailer has not yet reached the point where he knows the importance of spending a moderate sum of money a year for trade information, he is not sufficiently wide-awake to be a good retailer, and he will never be a leader in the community in which he works.

Why is it that we speak of a certain merchant as being enterprising? Is it because he believes in economy in the matter of store light? Is it because he permits his store to be a center for gossip? Is it because he does not understand the art of displaying goods? Not a bit of it. We say he is enterprising because there is an atmosphere about his place that impresses us. We know instinctively when a man is awake in business. And just as instinctively we drift into his place of business when we wish to purchase, because we know that we will be best treated from every standpoint when we buy our merchandise from the retailer who knows most about what is going on in the centers of trade.

The "P. & B." Paris Exhibits.

Among the most novel of the American exhibits at the Exposition is a pavilion erected by The Standard Paint Co. of New York. It is unique in construction and its location at the Avenue d'Iena entrance.

The inscription, "Standard Paint Co.," the American and European trade marks, and the various head offices—New York, London, Paris, Hamburg, Berlin, and Sydney—appear on the front of the pavilion, while, surmounting the roof as a weather-vane, is the well-known "P. & B.," with the rooster trade mark in gold. The trade mark seems peculiarly fitting in a place so entirely Gallic in character, as the building itself is occupied by the officers of the Paris Customs, which is indicated by the legend "Poste d'Octroi."

By special concession, after the French architects had themselves made successful use of P. & B. Ruberoid in the hallways and on the stairways of the chief operating building of the Exposition Commissioners at No. 2 Avenue Rapp for more than a year before the Exposition opened, it was arranged that an ornamental pavilion, to be constructed inside and out, flooring, sides, ceiling and roof, of Ruberoid, should be erected for the use of French authorities in the Colonial

THE STANDARD PAINT COMPANY'S PAVILION AT PARIS EXPOSITION 1900
CONSTRUCTION EXTERIOR AND INTERIOR DECORATED RUBEROID

THE "P. & B." PARIS EXHIBITS.

section. Thus a building purely American in material is being actually used during the term of the Exposition by the French Government. It is classified in the section of architecture.

Ruberoid, which has been so largely used as a roofing all over the United States, in nearly every European country, in Australia, Africa, and parts of Asia, is shown in the Paris pavilion capable of the highest art decoration.

The Ruberoid covering the exterior walls is decorated in imitation of gray birch with pilasters in oak. The roof is Ruberoid undecorated. The interior walls, above the base of imitation wood, are tastefully painted in floral designs on a delicate background as in fresco. The ceiling is paneled and the Ruberoid elaborately decorated in allegorical design, emblematic of the American, European, Asiatic, and African continents. The flooring bears a tastefully colored border in Grecian design, and though Ruberoid was in service as a decorated flooring at the recent Brussels, Sydney, and other expositions, the Paris decorations are of a higher artistic grade than has heretofore been attempted, and as floors covered with Ruberoid have shown a lasting quality of over five years, here would seem to be a material that will ere long prove a formidable rival to oil and other floor cloths, having the further merit of being far below such in cost. While other flooring manufacturers were paying high prices for the privilege of laying their floorings in various parts of the Exposition, many solicited Ruberoid for their floors.

The roofs of the Exposition warehouses in the Rue Javelle are also covered with Ruberoid, and thus has this American product on its special merits won the highest place, where the barriers of tariffs, natural trade prejudices, and the world's competition were all encountered.

In the American section (Machinery and Electricity department) the P. & B. electrical compounds, insulating varnish and tape are shown; in the Civil Engineering and Transportation Department are the well-known P. & B. insulating papers, roofing, and other products of the Standard Paint Co.

The reproduced photograph shown in this issue gives a very clear idea of the pavilion which typifies a material, the use of which in the past ten years has spread from its native New York and New Jersey to the De Beers mines, South Africa, to the German settlement at Kiautchau, China, and every portion of the civilized earth.

The chief offices of the company in Europe are at 50 Boulevard Haussman, Paris; 59 City Road, London, E. C.; both of these offices being in charge of Robert W. Blackwell & Co. (Ltd.), at 16 Friedrich Strasse, Berlin, and 33 Grimm, Hamburg; the German offices being in charge of Allut Noodt & Meyer Co. (Ltd.).

American visitors to the Exposition will be heartily welcomed at these offices, and every possible courtesy will be extended to them.

J. D. Warren Mfg. Co.'s New Factory.

The J. D. Warren Mfg. Co., Chicago, Ill, are moving into their own establishment recently secured at Quincy, Ill. They gave that city preference over other locations on account of freight facilities in securing material by water transit and less liability of labor trouble that larger cities are exposed to. They also favor Quincy on account of the expense of living being much less for their workmen, which naturally reduces cost of production, and this their customers will receive the benefit of. Their new factory will be equipped with the most modern machinery, every new device will be secured for rapid and perfect construction of their Hardware Cabinet Shelving, to which they will confine their entire attention. Their finishing department alone is 150 feet long, 40 feet wide, and four stories high, aside from separate buildings for machine work, dry kilns, and lumber sheds. In this department all outfits, whether of one or one hundred cabinets, bases, etc., are placed in position and fitted as perfectly as if they were in the store for which they are designed, the height of ceiling of one large room being ample for this special purpose.

When to Stop Advertising.

An English journal requested a number of its largest advertisers to give their opinions concerning the right time to stop advertising, and the following replies were received:

When the population ceases to multiply, and the generations that crowd on after you and never heard of you stop coming on.

When you have convinced everybody whose life will touch yours that you have better goods and lower prices than they can get anywhere else.

When you stop making fortunes right in your sight solely through the direct use of the mighty agent.

When you forget the words of the shrewdest and most successful men concerning the main cause of their prosperity.

When younger and fresher houses in your line cease starting up and using the trade journals in telling the people how much better they can do for them than you can.

When you would rather have your own way and fail than take advice and win.

John Chatillon & Sons' New Catalogue.

John Chatillon & Sons, 85-93 Cliff Street, New York, have recently published an extremely important catalogue of spring balances, scales, butchers' cutlery, and other goods controlled, manufactured or handled by this old house. This is one of the most progressive catalogues they have ever issued, being extremely complete in every particular, printed on excellent paper, handsomely illustrated, containing 264 pages, and bound in cloth with gilt back and title. Included in its contents will be found everything connected with their line of business, from the ordinary common straight spring balance to the heavy circular dial balance in use by butchers, fishmongers and others desiring convenient methods of weighing the products they handle. Their regular line of goods has been so long before the trade that they are being imitated by others, and Messrs. Chatillon & Sons feel called upon to announce to the trade that in order to protect the merits of their spring scales, so well and favorably known for sixty-five years, they desire to inform the trade that every spring scale manufactured by them has their name as makers plainly on the dial. They have advertised this fact thoroughly not only in the columns of *Hardware*, but those of other trade journals, and there is no excuse whatever for the trade being deceived in this important particular. Any scale without this name on the dial is not a "genuine Chatillon scale." Included in the contents of the catalogue will be found warehouse balances, circular coal balances, leather inspectors' scales, dynamometers, board scales for weighing pasteboard, chair balances, underwear scales, the inner circle of the dial giving the weight of a single article placed upon the scale, while the outer row of figures at the same time gives the weight per dozen. Every variety of scale now before the Hardware trade seems to be included in the assortment manufactured by this concern, more particularly such scales as are in use by prominent manufacturers, such as equivalent scales, by which manufacturers and dealers estimate quickly and accurately the weight of a quantity by simply weighing a sample piece. In using an ordinary scale for this purpose the inaccuracy of the weight of a single piece multiplies according to quantity, all of which is obviated by the use of this scale. One of the most suggestive scales made and included in the assortment is called the "Favorite" beer scale. It is well known that beer cannot be measured accurately in a liquid measure, and that the same quantity cannot be given twice alike except by weighing it. By the use of this scale the dealer is enabled to know exactly what quantity is furnished every time, as the froth does not count in the weight. Family scales of every description are also included; likewise market scales with high columns and extra bases. Included in the assortment of goods covered by the catalogue may be found various appliances used in common with the scales, such as weights, brackets, measures, twine reels, etc. A portion of this catalogue is devoted to the product manufactured by the Foster Bros. & Chatillon Co., which embraces the large line of knives, cleavers, steels, etc., formerly made under the name of Foster Bros. and the Phœnix Knife Co. The Foster Bros. knives are made especially for the meat-cutting industry, and by that large body of users have been favorably and universally known. They are here fully illustrated in all the styles that are made, list prices accompanying the same, and in addition to those shown are a variety of other appliances that are desirable in the same connection. This line also includes a large assortment of cleavers that have been marketed under the name of Foster Bros. and still retain that stamp. John Chatillon & Sons are the sole agents for the United States for Friederich Dick's Magnet Diamond steels. These goods have attained their high standard of merit by the aid of a special steel which is used only by Dick's Works in Esslingen. This catalogue is one that no Hardware library should be without, as it covers so large a line of goods not apt to be found in any other catalogue in the trade between two covers. We are pleased to state that John Chatillon & Sons will gladly distribute the catalogue to the trade upon application being made to them for the same.

National Enameling & Stamping Co.'s New Catalog.

One of the most pretentious and ambitious catalogues ever offered in the interest of the line of goods now controlled by the National Enameling & Stamping Co., 81-83 Fulton Street, New York, has been recently issued as "Catalogue No. 1" of this concern. It is certainly the most complete one that has come under our observation, embracing this great line of goods. They state in the prefatory remarks that they illustrate and describe in it the various goods manufactured by the company, it being their object to embody in this book the complete lines manufactured by their predecessors, whose individual plants they acquired, and which embraces the following well-known concerns: Haberman Mfg. Co., New York; Kieckhefer Bros. Co., Milwaukee, Wis.; St. Louis Stamping Co., St. Louis, Mo.; Matthai, Ingram & Co., Baltimore, Md.; American Stamping Co., Brooklyn, N. Y.; Eastern Tinware Co., Portland, Conn., and the Stewart Enamel Co., Bellaire, Ohio. The enumeration alone of the companies here given is sufficient indication of the contents of this important catalogue, in compiling which it was found necessary to change quite a few conflicting numbers, but an endeavor was made to arrange the new numbers so that when ordering by name and number only it may be understood what is wanted without a further description, and this, it may be mentioned, is one of the most important features of an intelligent catalogue. It is considered quite necessary that the numbers as given in this book shall be used in the future in making up orders, as that is the only way by which correctness can be assured. The compiler deserves great credit for his work, as he has undoubtedly had an abundance of it. No attempt has been made to give prices throughout the catalogue, it being intended especially as one of reference in making up orders, and prices no doubt will be furnished on separate price lists. A telegraphic code is given to facilitate rush orders by telegraph or otherwise, which will undoubtedly be found of great assistance. The contents of the catalogue are divided into the followng divisions: Granite steel ware; Blue and white enameled steel ware; White and white enameled steel ware; Ornamented enameled steel ware; Deep stamped ware; Plain and retinned shallow stamped ware; Tinners' trimmings; Wrought steel and copper metal ware; Plain and retinned seamless sieves; Tea, table, and basting spoons; Railroad milk cans and dairy supplies; Pieced tin ware; Heavy polished ware; Polished and nickel-plated copper and brass ware; Japanned ware and heavy japanned ware; Tea trays; Black and galvanized steel ware; Kitchen sinks; Plumbers' supplies; and Lawn and garden furniture. No previous catalogue has ever embodied in its contents so desirable a variety of housefurnishing goods, and it must prove admirably advantageous in the extension of an export trade for this particular product. The issue of this book amounts to 35,000 copies, and over a year was occupied in its compilation and publication. Over four carloads of material entered into its construction, the paper weighing 96,000 pounds. One ton of paper was used for the covers alone, and it required 3,050 illustrations to properly embellish its pages so that it might be thoroughly understood. A few lithographed pages are inserted in their proper places, calling attention to Granite steel ware, Venetian and Brilliant enameled steel ware, which are there shown in their natural colors. It is the intention of the company to distribute this book liberally to all interested throughout the entire world, and they state if any dealers who have not received a copy should like one and will write for the same, their requests will receive prompt attention. This offer on the part of the company, we hope, will be largely availed of by the trade, as a more important catalogue of its kind has never been brought to our attention; so portable and yet so complete.

THE GREAT INVENTOR, HARVEY.

A handsomely printed and illustrated book of 100 pages, in which is given in detail the work of Hayward Augustus Harvey and his father, Gen. Thomas William Harvey, just published, is of considerable trade interest. Hayward Augustus Harvey was for some time prominent in the affairs of the screw companies established in Providence, and later as the inventor of the armorplate which about eight years ago successfully met the severe tests of the Navy Department. This memoir was prepared by the sons of the distinguished inventor, and it contains a great deal of information relative to the manufacture of screws and the making of Harveyized armor, the name given the new material for protecting ships of war.

Thomas William Harvey, the father of Hayward Augustus Harvey, was born in Vermont in 1795, and invented machinery for cutting screws and established a screw factory in Poughkeepsie, N. Y. Later he became interested in the iron and steel business. One of his principal inventions was the "rotary toggle joint press," patented in 1832, and described as "a machine of immense power, possessing all the advantages of the screw or inclined plane, with the additional advantage of almost a total reduction of friction." It was utilized in the heading of screw blanks and other screw machinery, and was patented in 1837. Gimlet-pointed screws were made. In 1846 he patented automatic machinery for the production of screws, and was identified with various screw companies. Gen. Harvey died in Connecticut in 1854 from injuries received in the Norwalk railway accident. His age was 58 years.

HAYWARD AUGUSTUS HARVEY.

Hayward Augustus Harvey was born in Jamestown, N. Y., in 1824. His first connection with the screw industry was in the capacity of draughtsman, and after his marriage in 1849 he located in Somerville, N. J., where he had charge of a wire mill which furnished material for a screw company. Then he was employed by the Harvey Steel and Iron Company at Mott Haven, where the stack is still standing near the Harlem river, and after his father's death took up the subject of screw machinery and came in contact with the Providence manufacturers of screws, who had made use of Gen. Harvey's patents. Mr. Harvey was one of the agents of the American Screw Company until 1863, when he retired and invented a set of automatic machines, consisting of headers, shovers, and nickers, and in 1865 established the Continental Screw Company of New York. The Continental plant four or five years later was purchased by the American Screw Company and the machinery was taken to Providence. Mr. Harvey again became an adviser of the American Screw Company and spent a great deal of time with the Peru Steel and Iron Company, a concern with mines and forges at Clintonville, N. Y. His next important work was in the production of machinery for rolling threads on screws. The Harvey Screw and Bolt Company was organized, but the factory commenced at Lime Rock, Conn., never was finished, and the patents and machinery were sold to the American Screw Company of Providence and the Nettlefolds of England. The cold forged screw then became the standard, displacing the screw on which the threads were cut. Mr. Angell, of the American Screw Company, in a letter written in 1887, gave Mr. Harvey credit for his inventions, and the Harvey machine for rolling threads attracted much attention in Europe.

The Harvey Steel Co. was formed in New York in 1886 for the purpose of developing a new process of hardening low grade steel invented by Mr. Harvey. Furnaces were erected in Jersey City, and hardened armor plate was the most important product. The validity of the Harvey patents was established, and the contest between guns and armor commenced again. The Harvey armor, it was estimated, afforded from 50 to 70 per cent. more protection than any furnished by European makers. In 1892 the plate resisted five projectiles from an eight-inch gun without cracking. The adoption of the armor by the United States Government followed, Commodore Folger having pronounced it the "most wonderful armor ever made, its resisting power being astounding." The process hardened the plate several inches deep, the remainder being left in its original condition. The surface was hard and the back soft and tough. Tests were made in England, and the Harvey plates were adopted by various foreign nations. Mr. Harvey died in 1893, just after receiving notice of the recognition of the great value of his process by European Governments. Three years later only the Harvey plates were acknowledged as the standard.

From 1859 to 1893, Mr. Harvey was granted 78 patents, the greater number being on screws and screw-making machinery. His armor plate was patented in 1891, and the composition for super-carburizing steel and the manufacture of steel rails in 1893.

The author of the very interesting volume is Dr. Thomas W. Harvey, of Orange, N. J.—*Providence, R. I., Journal.*

Obedient Boy—Mamma, may I speak?

Mother—You know that you must not talk at table.

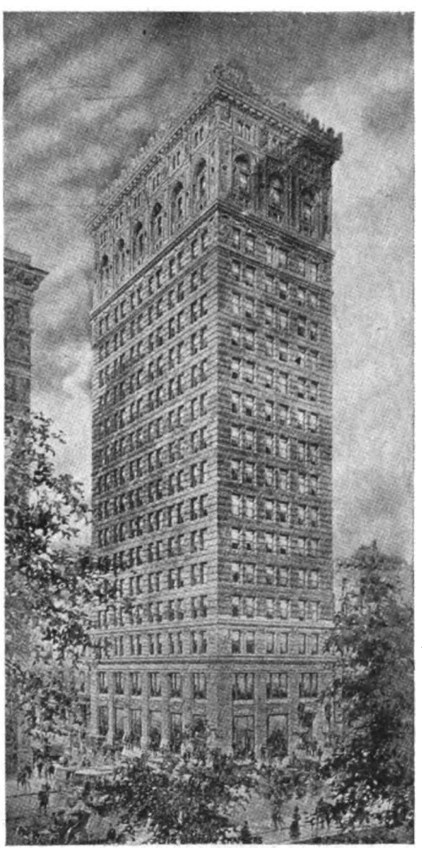
"May I not say just one thing?"

"No, my boy. When papa has read his paper you may speak."

Papa reads through his paper, and says, kindly: "Now, William, what is it?"

"I only wanted to say that the water-pipe in the bath-room had burst."

Then they heard an ominous "drip, drip," and all hands were piped to swab floors.



Paris has the largest and most complete sewerage system in the world.

Model of a New "Sky-Scraper" at the Paris Exposition.

One of the most striking and instructive of the American exhibits at the Paris Exhibition is that showing the construction of the modern type of steel-frame office building. The people of the Old World have never believed in the eggshell structures of the present day in America. Their masonry has been always massive and, therefore, low. With them the walls are used to support the weight of the building, and it would be almost impossible to construct walls capable of supporting the immense pressure of superincumbent masonry which would be present in a stone building of twenty stories. They insist that walls are massive because they are weight carriers.

This American skyscraper is being sent across the ocean in the hope that Europeans may be convinced thereby that their ideas about walls are wrong. They are to be shown that the wall, as newly constructed in America, is not a weight bearer at all; that the weight of great buildings is now supported by the steel skeletons concealed behind their fronts of terra cotta, just as the bones within a man's body maintain him in an upright attitude; that the inclosing bricks and mortar have no more stiffening power than the coat on a man's back, and serve no other office than to exclude the wind and rain.

BROADWAY CHAMBERS.

The building represented is not an imaginary one, but an actual structure, known as "BROADWAY CHAMBERS," which was erected at the corner of Broadway and Chambers Street, in New York city, during the fourteen weeks ending January 23d of the present year. It is eighteen stories high, ornate in decoration and symmetrical in contour. Several models representing the whole and portions of this structure in miniature constitute the exhibit. One of these is a model of the building as it now appears, made of plaster of paris. It stands only twelve feet high, while the building which it represents is 228 feet high, yet every little detail of the ornamentation is faithfully reproduced in it.

A second model, less beautiful than this but far more striking and instructive, and also much more troublesome to construct, was one showing the steel frame. It took no less than three months to find a machinist who could do this work. To appreciate the magnitude of the undertaking, it is only necessary to say that every beam and joint and upright in this last building had to be reproduced in miniature, and that there were no less than twenty thousand separate pieces in all. Several machinists tried to roll them out of solid metal and failed. At last the work was successfully accomplished by using thin sheet brass, laboriously cutting it to the required size and then soldering the sheets together, so as to give the effect of the hollow steel beams used in the actual construction. In each one of these hollow beams four sheets of brass were used, and the whole was nickel plated. This model will have imitation boilers, engines, and furnace in the basement, and from the last a tall smokestack will rise up through the frame and project above the roof. There will be three elevators, whose 12 feet of height will be expressed in little bronze cages only 5 1-2 inches high, and in which two or three humming-birds would be crowded. In fact, it is interesting to note that if the completed model could be peopled with manikins, each 2 1-2 inches high, they would have just about as much room as full-sized men now enjoy in the real New York skyscraper. In addition to the engines the metal skeleton will be fitted up with all the steam pipes, water pipes, gas pipes, and electric wiring which the real building has, and each of these systems will be expressed in pipes of different colors. One of the little elevators will be run by electricity.

Behind the metal skeleton will be shown an exact, full-size reproduction of the engines and dynamos by which the machinery in the "BROADWAY CHAMBERS" is operated, and on the opposite of the aisle, behind the plaster model, there will be a complete room, which will look as if it had been actually sawed out of the original building, in such a way as to expose the beams which hold up the floor, the joists which help to form the wall, and the entire system of piping and fireproofing which is usually concealed behind the plaster. The inside will present all the appearance of an actual room, with finishing, painting, and decoration complete, even to the chandelier hanging from the ceiling.

It is hoped that many, if not all, who see this exhibit and take time to study its details will be convinced that American steel construction is the most economical and useful, if not the most artistic, method of building.—*American Exporter.*

Making Wooden Dishes.

The manufacture of wooden dishes at Sandy Creek, N. Y., which is a center of this industry, is thus described: Coming from the veneer machine the strips are cut by a swing saw into squares, the thickness being 1.20 of an inch and from 6 to 12 inches square. These go up an elevator to a dry room. Each square is placed on edge in long, dry racks, this work being done by girls. The wood is thoroughly dried by means of hot air, on racks drawn by two endless chains through a corridor some 200 feet long, arranged with a huge fan at one end and myriads of hot steam pipes at the other. When dried the "sides," as they are then called, are cut, forty at a time, into circles by means of circular knives and a die cutter. The sides are put up by girls into bunches of forty each. Great pains are taken to cross the grain to prevent splitting while being cut and pressed into shape. Now what were 'sides" are called "circles." The circles go below to the press room and are again sorted over by men, who put them ten and twelve in a bunch, according to the kind of plate, whether plain or fluted, to be made. The presses are run by power and open and shut like an ordinary cheese press, each machine having from sixteen to eighteen heads or dies. These presses are kept as hot as possible by live steam running through them. Each man makes from forty to sixty-five crates for a day's work. The plates, after being pressed, are counted and sorted by girls into piles of 250 each, which are put into crates.—*Exchange.*

RECENT TRADE PUBLICATIONS.

ANSHUTZ-BRADBERRY Co., Pittsburgh, Pa. Artistic leaflets calling attention to the manifold merits and superior ornamental excellence of the Triumph Air Tight and the Tremont Hot Blast parlor stoves. They are handsomely printed in two colors on coated paper, and would attract attention wherever seen.

A. L. SMITH & Co., 1305 Arch Street, Philadelphia, Pa. Catalogue of the Fifield Automatic Drilling Attachment, which is self-feeding and can be used in any brace. Illustrated throughout, showing the various uses to which the same may be applied, and the methods and manner of its use, the half-tone illustrations being sufficiently graphic in themselves to make detailed instructions entirely unnecessary. What little information is needed is conveyed in an off-hand manner that is original and unique.

CHAMPION STEEL RANGE Co., Cleveland, Ohio. Catalogue No. 5, illustrating and describing their line of double-flue hot blast wrought steel ranges, marketed under the names of Champion, Active Champion, Champion Jr., and Marquart. Pamphlet catalogue of 40 pages, handsomely illustrated with wood cuts, showing in detail all the important advantages embodied in the construction of these up-to-date goods. Sizes and dimensions of every particular one is given, with list prices under various conditions. Handsomely printed on good paper, and is well worth perusal by the Hardwareman who receives it, and the one who has not should ask for it.

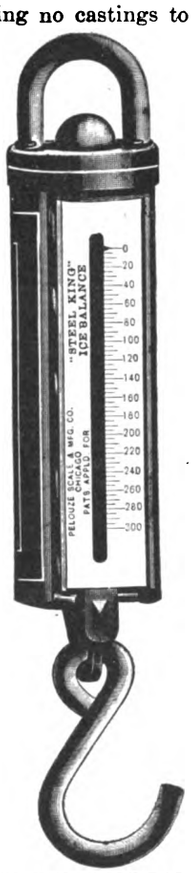
FERRACUTE MACHINE Co., Bridgeton, N. J. Catalogue No. 13 of presses and dies. This is a pamphlet of over 40 pages, gotten up in the usual style for which the above company is noted, in which enough material is put into one catalogue to fill a volume four times the size. The catalogue refers to nearly 500 kinds and sizes of foot and power presses, lathes, beaders, dies, etc., for working bar and sheet metals, paper, cloth and leather, superseding all previous catalogues covering these lines. It is filled with illustrations giving in detail the dimensions and prices of every description of press shown, and, as above observed, is loaded with just the information that everybody requires when contemplating the purchase of manufacturing facilities of this character. It is a very useful catalogue of a very important concern.

INDIANA BENT RUNG LADDER Co., Indiana, Pa. Catalogue and price list of the patent bent rung extension ladders and step ladders. Catalogue of 50 pages, printed throughout in two colors, handsomely illustrated with half tone engravings, showing interior of Hardware stores where their system of store ladders is in operation, and illustrating their various products as well, including the single bent rung ladder, which is made in a number of lengths from ten to twenty-two feet; their single and double Columbia step ladder, the six-feet step ladder of which is claimed to sustain a weight of 700 pounds. They manufacture a variety of step ladders, among which is the Hastings step ladder, which is made with a groove in side pieces, in which there is a brace of the same material as the sides. This method of construction creates additional strength, and is highly spoken of. The Wettling step ladder is another one of their products, the sides and back made of bass wood and ironed in the same maner as the Hastings. A portion of the catalogue is devoted to testimonials from parties who have used or sold the product of this company, which would naturally commend the goods to those handling goods of this character. This catalogue may be had for the asking.

JOS. DIXON CRUCIBLE Co., Jersey City, N. J. Booklet catalogue covering their one specialty of graphite facings, and, as is customary with all publications of the Jos. Dixon Crucible Co., it is printed in good style, full of information, and very easily understood, calculated to largely create a demand for this important part of their business.

ESTATE OF P. D. BECKWITH, Dowagiac, Mich. Pamphlet catalogue of 138 pages, very artistically gotten up, handsomely printed on coated paper, and adorned with an extremely ornamental cover in imitation of water colors, reflecting considerable credit upon the catalogue maker. It is published under the name of the "Round Oak Year Book," which book and its contents cover the "Round Oak" line of their productions, showing the principle used in all its various forms, from the ordinary parlor heater to the combination heater that warms the entire house. Many special features are referred to, and the advantages of the "Round Oak" line of cook stoves and ranges are fully set forth. The illustrations are very attractive, and altogether it is an extremely handsome catalogue of its kind, without being mammoth in its proportions.

BOSTON BRIDGE WORKS, 70 Kilby Street, Boston, Mass. A very attractive publication of upward of sixty pages, embodying in its contents handsome descriptions taken by the albertype or similar process, serving to show some examples of the important work which this company have constructed during the twenty-five years they have been engaged in businesss. They are large engineers and manufacturers of steel bridges, roofs, buildings, frames, turn-tables, and in fact all classes of structural steel work, and the illustrations given in this pamphlet give an excellent exposition of the quality and style of work that may be entrusted to them. It is about as handsome a publication as we have had brought to our attention, impressing the reader with the great importance of the work, and the superior facilities the company must have to be able to do justice to it.



DEXTER HARRINGTON & SON, Southbridge, Mass. Catalogue No. 4 covering their line of high-grade cutlery, long and favorably known to the trade, as would be naturally indicated by their catch line, "Old Stand 1818." It is stated that some twenty or more new styles and lines are given not heretofore illustrated. The catalogue shows by the aid of full-size cuts a very important line of shoe knives of every description demanded by the workers in that important industry. They are large manufacturers of rubber knives, for which particular use heavier blades of special temper are needed, although the regular styles are similar to shoe knives. They are large manufacturers of blades for the various purposes to which these useful tools apply. One handle can be used for a number of styles, including rubber blades, illustrations showing four principal kinds, and shoe blades, of which a larger number of styles are required, together with the handles necessary for their completeness. Cloth blades for clothing cutters are also largely represented in the catalogue. Other styles of knives, such as butcher, steak, skinning, boning and sticking knives are well illustrated. Fish, carving, cheese and kitchen knives are included in the contents; also putty, paperhangers', broom, and broom corn knives, banana, oil cloth, cork knives, etc. This is a very desirable catalogue of an excellent line of goods, and a class of manufactures that the Hardware trade should be familiar with.

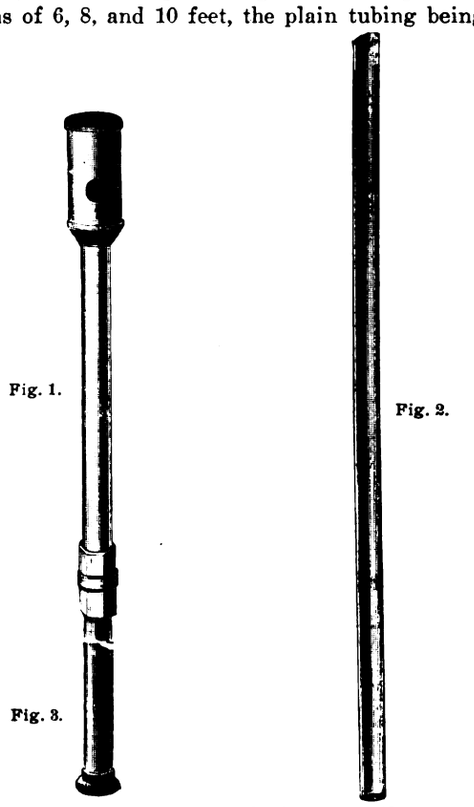
NEW GOODS AND SPECIALTIES.

"Steel King" Ice Balance.

The Pelouze Scale & Mfg. Co., 133-139 South Clinton Street, Chicago, Ill., have recently put on the market the superior ice balance of which we give an illustration. It is marketed under the name of the "Steel King," and among its many features referred to by the makers, it is constructed entirely of steel, having no castings to break nor screws to



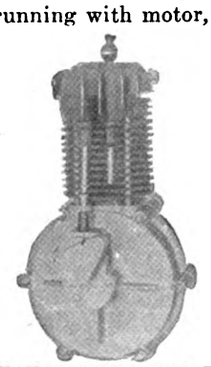
"STEEL KING" ICE BALANCE.

shake loose. The dial is finely nickel-plated, having large black figures, which can be distinctly seen, and is beyond the usual length. Each scale is provided with what is known as a "limiter," which is applied to it in order to limit the action and guard against the spring being strained beyond its capacity through any carelessness. The scale can be readily adjusted, if necessary, by removing the cap on the top, giving the screw a slight turn, this method assuring a permanency to its action. Any part can be supplied separately, and replaced by the owner without returning the scale to the factory. This alone should naturally commend its use. The "Steel King" is made in three sizes, No. 200, which weighs 200 pounds by 2 pounds; No. 300, weighing 300 pounds by 5 pounds, and No. 400, weighing 400 pounds by 5 pounds. They are boxed and weigh in all 4 1-2 pounds each. The company are manufacturers of a large line of postal, counter, family, market and confectioners' scales, spring balances, and similar Hardware goods and willingly furnish full information regarding their different products in answer to a request forwarded to them at the above address.

Kegler's Patent Tubing for Chain Pumps.

The Williams Pump Co., Norwalk, Ohio, are manufacturing Kegler's patent galvanized tubing for chain pumps, which possesses important features, substantiating the claim that it is light, clean, strong, and durable, and far superior to many kinds of wood tubing now on the market. The tubing consists of a reservoir or top piece united with a coupling, as shown in Fig. 1. Plain tubing, as illustrated in Fig. 2, is added between the top and bottom piece, shown in Fig. 3, wherever the depth of cistern or length of tubing required is greater than 19 feet. It is manufactured from the best galvanized iron, which it is claimed will not rust for a number of years. It only weighs about one half pound to the foot, while wood tubing, especially when submitted to moisture, weighs six pounds or more to the foot. This enables the Kegler tubing to be taken out easily, and put in again when necessary without much labor. The manufacturers guarantee it never to freeze, as the top or upper section is made on a taper, or is enlarged so as to allow the buckets to remain loose and the water to settle back below frost line. Among the advantages referred to by the manufacturers, it can be attached to any make of curb. It is perfectly round and smooth inside, thus avoiding all slimy accumulations. It allows the buckets to run more freely, and necessarily increases their durability. Being connected with couplings, it is readily put together, and can easily be put in under low porches and ceilings. The tubing is made in lengths of 5, 6, 7, 8, 9 and 10 feet. Long reservoir pieces are recommended for use in greater depths only. The funnel tubing forming the bottom piece is made in lengths of 6, 8, and 10 feet, the plain tubing being made

KEGLER'S PATENT TUBING FOR CHAIN PUMPS.



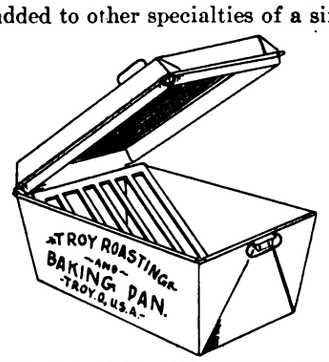
in the same lengths. The manufacturers state that if not ordered otherwise a complete coupling is attached to all reservoir and plain sections, and as it can be attached to and used with any wood curb, they are prepared to furnish free with every reservoir section a block and clamp.

Advance Bicycle Motor.

The Lowell Model Co., Lowell, Mass., are placing upon the market an improved hydro-carbon motor designed especially for use on bicycles. This is marketed under the name of the Advance Bicycle Motor, and is of the four-cycle type, and develops one horse power

Digitized by Google

at one thousand revolutions per minute, weighs 25 pounds with aluminum crank case, and is 13 inches high. This motor can be attached to any bicycle frame by the aid of braces, and can be placed over rear wheel in position to drive with chain to friction on wheel. Or, if more to be desired, it may be placed in the frame and drive either with the friction or by chain to large sprocket on the rear hub. Either method can be applied in connection with the coaster brake, thus allowing use of the pedals in starting, and when running with motor, pedals serve as foot

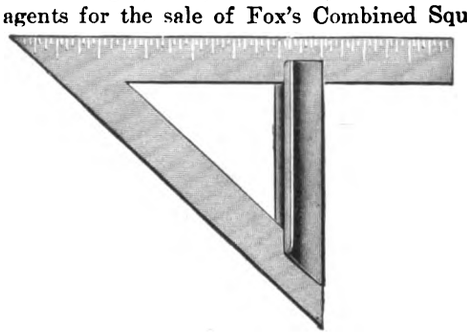


ADVANCE BICYCLE MOTOR.

rests. The manufacturers state that in the construction of this motor they have introduced several improvements over the general construction of the flange cooled motor. The crank shaft is a steel casting which obviates the liability of crank ever going to pieces from unexpected loosening up of any parts which is possible to occur with a crank built up of several pieces bolted together. This method of construction will also be appreciated by those who wish to construct motors from these castings, as work is more easily accomplished, and better results insured when completed. The manufacturers recommend for ignition on these motors the jump spark as being more reliable for the high speed than either the contact or wipe spark, as it allows a closer control of speed by variation of time of ignition. Full information regarding this improvement on bicycles will be furnished by the manufacturers upon request. As the indications are at present the motor cycle will be one of the great improvements of the future, coming to the front under the popularity of the automobile, and it is desirable that those in the Hardware trade at present handling wheels should look into these improved methods of propulsion and be prepared to undergo a civil service examination.

Troy Roaster and Baking Pan.

The Royal Polished Steel Roaster Co., Troy, Ohio, are manufacturing the Troy Roaster and Baking Pan, which has been recently added to other specialties of a similar character

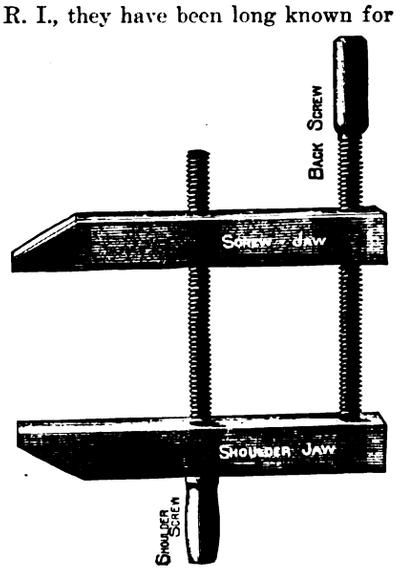


TROY ROASTER AND BAKING PAN.

that have been made by this company for a long time. This is intended to meet the demand for a lower-priced baking pan than their Royal Roaster and Baker, so well known to the Hardware trade. It is made of the best quality of American iron, smoothly finished, in four sizes, Nos. 6, 7, 8 and 9, varying in size from 10 inches wide 15 inches in length and 7 inches in depth, to 12 inches wide, 18 inches long, and 8 inches in depth. As will be seen from the illustration of this specialty given herewith, it is composed of one cover or lid, one deep pan, and one grate bar, upon which to roast. It is practically self-basting, and requires no attention in order to have it perform good work. They will be found by the housekeeper a great labor-saver, and the Hardware trade adding these to their similar line of goods, will find them a salable specialty, as their moderate price brings them within the reach of a class of trade that would hesitate in purchasing the more expensive grades of these goods.

Fox's Square and Miter.

Wiebusch & Hilger, Ltd., 15 Murray Street, New York, are sole agents for the sale of Fox's Combined Square and



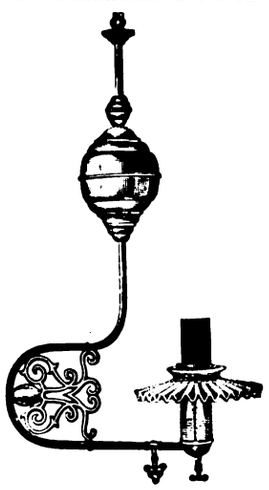
FOX'S SQUARE AND MITER.

Miter, which they are placing on the market through the Hardware trade, and which we illustrate herewith. The tool is now being made by the Challenge Cutlery Corporation, Bridgeport, Conn., which company have an established reputation for manufacturing high-grade goods, and this alone is a guarantee of the quality and finish of the article under consideration. It has been greatly improved in design, made stronger and more durable in the manufacturing of it by the aid of improved machinery. It is entirely of steel, and is guaranteed true and accurate. The desire on the part of the manufacturers is to market it at a price that will enable the customers to purchase readily, while at the same time it affords a good, profitable margin to the dealer, the manufacturers giving a liberal trade discount. The makers report that its popularity is increasing with successive orders, and the indications are that it will rapidly supersede all similar appliances for accomplishing the same purpose.

Superior Hand Screws.

Among the numerous high-grade wood specialties manufactured by the R. Bliss Mfg. Co., Main and Garden Streets, Pawtucket, R. I., they have been long known for making the

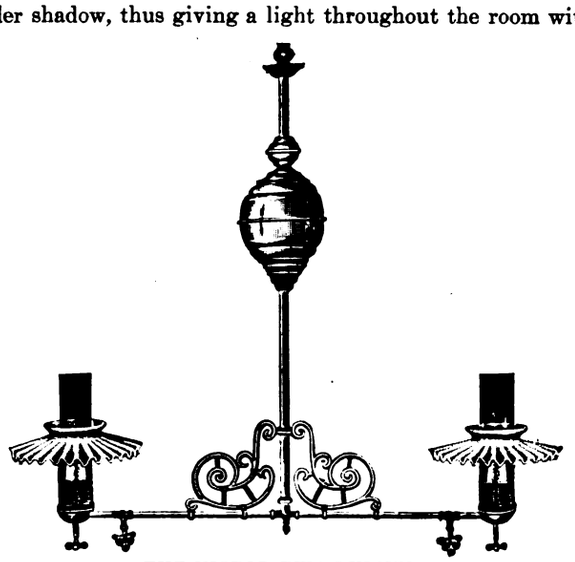
SUPERIOR HAND SCREWS.



finest hand screws now before the Hardware trade, finished in a superior manner, with screws carefully cut, perfect adjustment and alignment, and just exactly the grade of goods that every Hardware store should be glad to have in their stock to meet the demands of captious customers. Separate parts of these are furnished, if desired by the trade, and screws of extra length, if ordered, can be furnished at a special price. All these hand screws are marketed oil-fin-

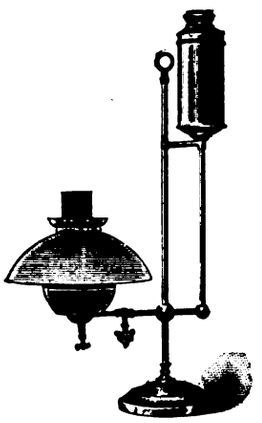
Digitized by Google

ished. They are made in 17 sizes, running from the diameter of screws 3-8 to 1 1-4 inch by eighths of an inch, to an extreme length of screw from 5 inches up to 28 inches, and the whole length of jaws 4 inches to 24 inches, at varying list prices. The R. Bliss Mfg. Co. make a large line of wood specialties suitable for the Hardware trade handling mechanical appliances, and will gladly furnish catalogues of their complete line upon request.



The Victor Lamp.

The Reserve Foundry & Mfg. Co., 95-97 Woodland Avenue, Cleveland, Ohio, are the manufacturers of the Victor Lamp,



THE VICTOR JUNIOR.

illustrations of a few of which will be found in this article. It is founded upon a principle entirely new, giving the lamp an individuality of its own, and they are produced in ornamental styles that readily adapt them to furniture of the most elaborate or unconventional styles. The manufacturers claim that the light produced is more brilliant than gas or electricity, giving very little heat, and when the directions are properly followed, is absolutely non-explosive. It is claimed when these lamps are properly placed there is no under shadow, thus giving a light throughout the room without variation, making it a very convenient and desirable method of illumination for small rooms, being specially adapted for store window lighting. It is made in a number of styles suitable for suspending from the ceiling, for use as a table lamp, or in another pattern as a wall lamp that will be found useful in factories, barns, stables, etc., this latter style being the cheapest that is manufactured by this company. The lamps are made from brass throughout, each piece being inspected before being used, and thoroughly tested under air pressure in water before being placed on the market. The joints are all cut with special threaded taps and dies—on a taper, thus assuring an absolutely perfect joint. This is mentioned in order to impress the dealer with the fact that every care is taken in the construction of this lamp to avoid all possibility of danger. The goods are guaranteed by the manufacturers for one year, and they desire to have agents and distributors in each town, county and State with whom liberal arrangements will be made, as this would be a desirable addition to any stock of Hardware or house furnishing goods.

THE VICTOR TWO BURNER.

THE VICTOR TABLE LAMP.

Crescent Enamel Co.'s New Plant.

The Crescent Enamel Co., of Cleveland, have nearly completed the repairs and additions to their buildings and expect to be in full operation by the middle of August. Mr. Henry C. Milligan, who is president of this new concern, has been engaged in the enameling business since 1868, having been connected with a number of different firms during that time, and in building the new plant he has used his experience to a good advantage, for while the plant is not large—the capacity being about 8000 pieces per day—it comes very near to being perfect in arrangement.

The process used by this firm is a new one, invented by Mr. Milligan after experiments covering a period of nearly twenty years. His books record nearly four thousand different tests.

In the process of enameling, cobalt bears the same relation to enamel that solder does to tin; that is, it is used to make enamel adhere to the metal. However, in the manufacture of mottled goods, commonly called "granite ware," the cobalt cannot be used as it destroys the color of the goods, consequently the "granite ware" now on the market has a tendency to chip, or scale off, thus destroying the value of the ware to a greater or less extent. Mr. Milligan has succeeded in finding a process by which the scaling is prevented and the mottled color retained. It is the intention of this firm to place on the market a complete line of high-grade enameled goods in all the different styles and colors.

Mr. A. B. Davis and Mr. Homer Hurst, who are associated with Mr. Milligan in the management, are both men of long experience in the stamping and enameling business.

Cholly (in cheap beanery)—I say, waitaw! There's a fly in this soup, ye know!

Waiter (to group at adjoining table)—Say, fellers! Here's a guy still dreamin' it's winter!—*Puck.*

"Here's a new suit for you," said the Deputy Sheriff on the morning of the execution.

"H'm!" grunted the condemned. "For once in my life I'll be dressed to kill."—*Philadelphia American.*

John Simmons Co.'s New Catalogue.

John Simmons Co., 106-110 Centre Street, New York, have issued a well printed and completely illustrated catalogue of 470 pages, bound in cloth, with gilt title on side. This is a very important catalogue, covering the extensive line of goods controlled by this company. The first few pages are devoted to cipher codes, by the aid of which telegraphic orders may be given at slight expense, the name indicating the article desired. The ciphers include pipe cipher, oil well casing, line pipe, drive pipe, and boiler tubes, with the length of the same indicated in feet and inches by code words. This part of the catalogue is made very complete, and accompanied as it is by the three divisions of "Queries and Commands," "Answer to Queries" and "Answer to Orders," it will undoubtedly facilitate all operations with this concern. The line of goods covered by the catalogue may be mentioned as iron welded pipe of every description, lap welded casing, lap welded boiler tubes, cast iron pipe, with a variety of specialties adapted for use with this description of supplies; and galvanized spiral riveted flanged pipe. Every description of pipe and pipe fittings will be found well illustrated and described, list prices being given in every instance. A discount sheet accompanies the book, being furnished to the trade only. Included in the contents of this desirable catalogue will be found every description of valve necessary for steam or water, gas or oil, and all the necessary tools in use by machinists and mechanics using these goods, including an immense variety of supplies in large assortment, making it a very valuable catalogue for the Hardwareman.

The Future Importance of Aluminum.

In a recent issue of the *Century* magazine there was a very striking and interesting article by Nikola Tesla on "The Coming Age of Aluminium," in which the famous inventor says:

"The coming age will be the age of aluminium. It is only seventy years since this wonderful metal was discovered by Woehler, and the aluminium industry, scarcely forty years old, commands already the attention of the entire world. Such rapid growth has not been recorded in the history of civilization before. Not long ago aluminium was sold at the fanciful price of $30 or $40 per pound; to-day it can be had in any desired amount for as many cents. What is more, the time is not far off when this price, too, will be considered fanciful, for great improvements are possible in the methods of its manufacture.

"The absolutely unavoidable consequence of the advance of the aluminium industry will be the annihilation of the copper industry. They cannot exist and prosper together, and the latter is doomed beyond any hope of recovery. Even now it is cheaper to convey an electric current through aluminium wires than through copper wires; aluminium castings cost less, and in many domestic and other uses copper has no chance of successfully competing. A further material reduction of the price of aluminium cannot but be fatal to copper. But the progress of the former will not go on unchecked, for, as it ever happens in such cases, the larger industry will absorb the smaller one; the giant copper interests will control the pigmy aluminium interests, and the slow-pacing copper will reduce the lively gait of aluminium. This will only delay, not avoid, the impending catastrophe.

"Aluminium, however, will not stop at downing copper. Before many years have passed it will be engaged in a fierce struggle with iron, and in the latter it will find an adversary not easy to conquer. The issue of the contest will largely depend on whether iron shall be indispensable in electric machinery. This the future alone can decide.

"While it is impossible to tell when this industrial revolution will be consummated, there can be no doubt that the future belongs to aluminium and that in times to come it will be the chief means of increasing human performance. It has in this respect capacities greater by far than those of any other metal. I should estimate its civilizing potency at fully 100 times that of iron. This estimate, though it may astonish, is not at all exaggerated. First of all, we must remember that there is thirty times as much aluminium as iron in bulk available for the use of man. This in itself offers great possibilities. Then, again, the new metal is much more easily workable, which adds to its value. In many of its properties it partakes of the character of a precious metal, which gives it additional worth. Its electric conductivity, which, for a given weight, is greater than that of any other metal, would be alone sufficient to make it one of the most important factors in future human progress. Its extreme lightness makes it far more easy to transport the objects manufactured. By virtue of this property it will revolutionize naval construction, and in facilitating transport and travel it will add enormously to the useful performance of mankind. But its greatest civilizing potency will be, I believe, in aerial travel, which is sure to be brought about by means of it. Telegraphic instruments will slowly enlighten the barbarian. Electric motors and lamps will do it more quickly, but quicker than anything else the flying machine will do it. By rendering travel ideally easy it will be the best means for unifying the hereto geneous elements of humanity."

Barrows Lock Co.'s New Catalogue.

Barrows Lock Co., Lockport, Ill. We are in receipt of a very handsome catalogue published by the Barrows Lock Co., Lockport, Ill., covering the line of locks and builders' Hardware manufactured by this company. It gives evidence of a great deal of care being taken in its compilation, and the illustrations are superior to those usually found in catalogues of builders' Hardware except those of old established companies. It is printed on excellent coated paper, the designs are well grouped, special pages being devoted to each, and on the page opposite a full set of numbers with description complete is given of every item shown, the illustrations in every case having the number or combination of numbers given in connection with the same. The book is printed in a manner that reflects credit upon the printers having the work in hand. The contents include the usual variety of builders' Hardware, and running from small latches to large store door handles. A number of front door sets and inside door sets are shown in the proper manner and described intelligently, so that the dealer may understand what he is purchasing; the illustrations are half size throughout the book, with rare exceptions. Store door handles are shown in large variety; door pulls, push plates, push buttons, name plates; even door knockers are not neglected; cast bronze and wrought steel butts in great variety; fancy surface hinges and corner plates cover a number of pages, and in addition to the usual variety of fancy bronze and bronze plated builders' Hardware will also be found the less expensive variety of goods known under that head, including hat and coat hooks, chest handles, door pulls, door handles, hinge hasps, shelf brackets, sash locks, etc. This is a book that will naturally inspire the dealer with the belief that the product contained therein will amply suffice for any retail requirement. It is well bound in cloth, gilt title, red edges, and of convenient size, 7 x 11 inches in dimensions.

"That trip to Europe did much to broaden your son Henry's views and polish his manners, didn't it?"

"I should say so. Instead of saying 'I'll bet you,' as he used to do, he now says 'I'll lay you a wager.'"—*Chicago Times-Herald.*

"What is the honeymoon, pa?"

"Well, the honeymoon is the only period in a man's life during which he considers it funny to come home and find that his dear wife hasn't dinner ready on time."—*Ex.*

How Wire Fencing is Made.

The rapid extension in the use of American steel wire fencing renders the following account of how such products are made of widespread interest. The factories described are among the largest in the country and are engaged in making every kind of fencing in general demand, including field and hog fencing, poultry fencing, lawn and cemetery fencing, and park fencing. Over 130 different machines, according to *Farm Machinery*, are used in these factories, and the variations in height, fabric, mesh, pickets, etc., constitute a remarkably large assortment. No less than 222 different styles, sizes, and varieties of fencing are constantly carried in stock to supply the trade. The highest fence made is 8 feet and the smallest regularly turned out is 13 inches. The machines used are in each case specially adapted to turning out one kind of fencing, but in manufacturing narrow widths two rolls of fencing are often turned out at the same time on one machine.

The improvements made in the more recent machines are quite marked. In the first machines, for instance, the pickets for hog and field fencing were crimped in a special machines for that purpose and then inserted by hand in their proper place in the weaving machine, previously prepared with cables or longitudinal wires after the fashion of a cloth weaver's warp. In the improved machines the whole process is done on one machine, which automatically draws the wire from a side reel into the proper place for a picket, cuts it off and crimps it and locks it into the cables. Probably the most interesting machines are those weaving poultry fencing. In these fencing wire is wrapped alternately on two strands of the heavier wire or cables running longitudinally. In crossing back and forth they form the mesh, which can be made large or small as desired. The guides through which the fine wires pass are shifted automatically from one cable to the other as soon as the necessary wraps are made. The shifting is done by an ingenious arrangement in connection with the cable twisters in the head of the machine, operated by a series of gears moved in unison with one another. The poultry fencing thus made is of unique pattern, having a cabled selvage and a cable every foot in the height of the fence. The lines all being parallel in this fence, the tension is distributed equally throughout it and on a straight line. Owing to this construction a full roll of 20 rods can be stretched at one time without injury. The posts are placed 16 to 20 feet apart. This enables saving to be made of fully half the number of posts ordinarily required, while top and bottom rails are rendered unnecessary, thus making a saving in that respect. The body of the fencing can be stretched as firmly as the edges.

The weaving machines are all built to weave the fencing in a horizontal position, the completed fencing being rolled on a large drum or cylinder not very high from the floor, so that the finished roll can easily be taken off the drum and removed. The machines are arranged with the finishing ends near the sides of the factories, thus leaving a space down the centres of these buildings for bringing in the coils of wire to be woven. These coils can thus be placed on reels on the right or left for feeding the weaving, picket or cable twisting machines. In some of the weaving machines it is desirable to feed the wire from long spools instead of coils, and an arrangement has been devised for filling a large number of spools at one time. The company have adopted 20 rods as the standard length for their rolls of field and poultry fencing. The old standard for poultry was 150 feet, but it has been found in practice that the new standard is better for the trade, as not so much scrap accumulates on the hands of a retail merchant with the greater length. Lawn fence is put up in rolls of 300 feet.

An important adjunct to the fence business is the manufacture of gates and posts. An entire building is devoted to this purpose, which is run by its own motor, and is equipped with punches and other machinery. The company manufactrue three distinct lines of gates, namely, steel frame garden and lawn gates, wood frame garden, all lengths, and pipe frame farm gates. Their pipe frame gate is of novel construction, which secures unusual rigidity. Instead of being bent at the corners, as is customary, the pipe is cut to the exact lengths required for the sides and ends. Two malleable castings are then used for each corner, one on the inside and the other on the outside, which are of a shape to hold the ends of the pipe firmly when bolted together. The castings are made with a lug on each end to enter holes drilled in the pipes, and thus provide additional rigidity. Diagonal braces extend across the gate, passing through holes in the inside corner casting and secured by nuts on the ends. Fencing of any pattern desired is fastened to the framework, and thus a farm gate is secured which is at once ornamental, light and unusually strong and rigid. No less than 180 different kinds of gates are carried in stock, but special gates are easily made to fit any space. Various patterns of steel posts are made for either lawn or field fencing.

The company built a machine shop two years since and now make all their own machines. This was found desirable, because improvements are constantly being devised and new forms of machines are being designed and tested, and the progress of such work can be more easily supervised when done in their own shop. The equipment is of the most approved character, comprising automatic gear cutters, milling machines, drills, planers, etc. The scope of the work done is drill are included in the equipment. An electric motor runs indicated by the fact that a 16-foot planer and a 5-foot radial all the machines in this shop.

The Rogers Screw Co.

The Rogers Screw Co., Providence, R. I., have added to their manufactures a complete line of regular cut thread steel and brass wood screws. Their experience in the manufacture of this description of goods has been a wide one, and they have every confidence that they will be able to improve on the design of the screws heretofore made. Some of these improvements are noted in their present product. Among other things they have a wider slot in the head, permitting the use of a screwdriver that has not an extremely thin bit. The thread is made sufficiently deep throughout the entire length of the screw from the beginning to the extreme point in order to give the screw increased holding power. More than the usual amount of attention has been paid to the manner of putting up their goods, in boxing the same and also in the style of labels used to designate the contents. In fact, the labels are a new departure, the adoption having been fostered and encouraged by a number of practical Hardware merchants. The words "flat" and "bright," being the most important, with the exception of the size, are made conspicuous and stand out in a pronounced manner, greatly facilitating the getting out of the goods and charging them up correctly. As the company's works are new and of the most modern construction, fully equipped with the most improved machinery and tools, there is no doubt their career will be a successful one, and their production prove exceedingly popular. Olney Arnold II., who is the treasurer of the company, and Henry R. Rogers, the superintendent, have been long and favorably known to the Hardware trade from their previous connection with the American Screw Co.

During last year 25,000 Japanese landed in the Hawaiian Islands. Within the current year 50,000 of these Yankees of the Orient will come to the Pacific coast if the movement is not interfered with. These are the figures given by Representative Kahn, of California, who is bringing Government attention to the influx.

"Does our new office boy ever pretend to be busy?"

"Does he? Why, whenever he is busy at all he is just pretending."

REVIEW OF THE MARKETS.

Wire Nails: No new or important movements are noted in the Wire Nail market. Some buyers anticipate that lower prices will inaugurate the Fall trade, and are holding back large orders with the feeling that there is nothing to justify any higher prices. Nothing received from the manufacturers would indicate this. The business is maintained in satisfactory shape, the demand being a conservative one in the face of present conditions. Quotations may be named as follows, f. o. b. Pittsburgh, terms 60 days or 2 per cent. off in 10 days:

To jobbers in carload lots	$2.20
" less than carload lots	2.25
To retailers in carload lots	2.30
" less than carload lots	2.40

New York prices remain as heretofore.

To retailers, carloads on dock	$2.48
" less than carloads on dock	2.61
Small lots from store	$2.60 to 2.65

Cut Nails: No change was made in the prices of Cut Nails at the meeting of the manufacturers on July 26. Prevailing prices were reaffirmed. No increased demand is noticeable. Orders for ordinary quantities of less than carload lots being the usual requisition. Prices being fairly were maintained. Quotations are as follows, f. o. b. Pittsburgh, terms 60 days, 2 per cent. off in 10 days:

Carload lots	$1.95
To jobbers in less than carload lots	2.00
To retailers in less than carload lots	2.10

New York prices remain about the same, the following may be considered as representing the market:

To jobbers in carload lots on dock	$2.13
" less than carload lots on dock	2.18
To retailers in less than carload lots on dock	2.31
Small lots from store	$2.30 to 2.35

Barb Wire: It is doubtful if a largely increased demand for Barb Wire will be experienced until the trade is satisfied of a settled market. Prices are well sustained, but a feeling is gaining ground that a concession to invite larger specifications will be made in the quotations before the season opens in full. Quotations for domestic trade are as follows, f. o. b. Pittsburgh, net cash 60 days, or 2 per cent. discount for cash in 10 days:

To jobbers in carload lots, Painted	$2.50
" " Galvanized	2.80
To jobbers in less than carload lots, Painted	2.65
" " " Galvanized	2.85
To retailers in carload lots, Painted	2.60
" " Galvanized	2.90
To retailers in less than carload lots, Painted	2.70
" " " Galvanized	3.00

Ellwood and Baker Wire is 5 cents and Washburn & Moen Glidden 10 cents per 100 pounds higher than the prices above named.

Plain Wire: Trade in Plain Wire is at present of but moderate dimensions. Demand being for small lots, and prices well sustained. Quotations, being without change, are as follows, f. o. b. Pittsburgh, terms 60 days, or 2 per cent. discount for cash in 10 days:

	Base sizes. Plain.	Galv.
To jobbers in carload lots	$2.15	$2.55
" less than carload lots	2.20	2.60
To retailers in carload lots	2.25	2.65
" less than carload lots	2.35	2.75

Above prices are for the base numbers, 6 to 9. The other numbers of Plain Wire and Galvanized Wire take the several advances noted in the following table:

PLAIN FENCE WIRE ADVANCES (CATCH WEIGHTS.)

Nos.					Galvanized.
6 to 9	Base				$0.40 extra.
10	$0.05	advance	over	base	.40 "
11	.10	"	"	"	.40 "
12 and 12½	.15	"	"	"	.40 "
13	.25	"	"	"	.40 "
14	.35	"	"	"	.40 "
15	.45	"	"	"	.75 "
16	.55	"	"	"	.75 "
17	.75	"	"	"	1.00 "
18	.85	"	"	"	1.00 "

For even weight bundles, 50 pounds and over, advance price 5 cents per bundle on above.

American Screw Co.: Under date of July 26, the following discounts are announced by the above company:

TIRE BOLTS.	Per Cent.
Norway Philadelphia	75
Eagle Philadelphia	77½
Bay State, Plain	65
" " Fluted	65
Sleigh Shoe Bolts	77½

STOVE BOLTS.	Per Cent.
Flat Head	67½
" " Annealed	67½
Round Head	67½
Stove Rods	67½
Sink Bolts	67½

Cordage: There is a fair demand for cordage at the present condition of the Rope market; although occasional irregularities exist in the prices quoted, the following fairly represents the market, with the usual rebate of 1-4 cent a pound, when purchased in carload lots:

	Pounds. Cents.
Manila, 7-16 inch and larger	10¾
Manila, ⅜ inch	11¼
Manila, ¼ inch and 5-16 inch	11¾
Sisal, 7-16 inch and larger	7¾
Sisal, ⅜ inch	8¼
Sisal, ¼ and 5-16 inch	8¾
Sisal, Lath Yarn, Medium and Coarse	7¼

Binder Twine: The end of the season being at hand, there is but little, if any, change in the quotations current in the present market, which may be represented by the following, f. o. b. New York, Philadelphia or Boston, subject to a reduction of 1-4 cent per pound for orders less than a carload lot and over 10,000 pounds, and a reduction of 1-2 cent per pound for carload lots:

White Sisal, 500 feet to pound	8½ cents.
Standard, 500 feet to pound	8½ "
Manila, 500 feet to pound	11½ "
Pure Manila, 650 feet to pound	12½ "

Linseed Oil: Dean Linseed Oil Co. quote as follows:

In lots of less than 5 barrels..... 70 cents per gallon.
In lots of 5 barrels or more..... 69 cents per gallon.
The five-barrel price only applies to deliveries of that quantity at one time.
Boiled Linseed Oil, 2 cents per gallon higher than Raw.
Calcutta Oil, 76 cents per gallon.

Foster Bros. & Chatillon Co., 89 Cliff Street, New York, make the following important announcement:

The corporation heretofore operating under the name of Foster Bros. Co. assumes to-day by permission of the proper authorities of this State the name Foster Bros. & Chatillon Co. We have recently purchased the plant formerly operated by the Phoenix Knife Co. for the manufacture of pocket knives, have made extensive additions to our factory, and have now the most complete and best equipped factory in the United States for the manufacture of butcher knives, cleavers, steels, etc., as well as pocket knives.

Messrs. John Chatillon & Sons, 89 Cliff Street, New York City, will continue to act as our sole sales agents as heretofore.

FOSTER BROS., & CHATILLON CO.
J. A. FOSTER, President.
E. H. CHATILLON, Vice-President.
C. E. FOSTER, Treasurer.
C. F. FOSTER, Secretary.

89 Cliff Street, New York City, July 10, 1900.

THE PHILADELPHIA TRADE.

The past ten days have seen an improvement in trade, and salesmen are now making themselves heard and seen, and Fall trade is commencing, after quite a vacation season.

Already, we hear reports that the decline in the price of raw material has reached the limit, and that reaction may be expected. Whether this is true remains to be seen, but there is good reason for believing that stocks in the hands of jobbers are badly broken, and that those in the hands of retailers are not heavy, and there can be no doubt that under

Digitized by Google

ordinary circumstances there will be a large demand from the jobbers to replenish their depleted stocks. This is a very healthful and satisfactory state of affairs, and a little patience on the part of the manufacturers should soon make trade in good shape.

Many manufacturers are now complaining that at present prices they cannot afford to make goods with raw material at current prices, and that they are losing money in meeting the market.

Orders that are coming in are for good assortments and covering the general line, proving stocks are not heavy; while collections are in the main very good, indicating the movement of a large amount of money for crops and wages.

BIDDLE HARDWARE CO.

THE PITTSBURGH TRADE.

The early days of August see the commercial traveler brightened up by his vacation, posted up by the manager, and braced up by anticipations of a good season's trade, starting on his Fall campaign. During the travelers' rest, mail orders have come in regularly for current wants, showing that merchants have little stock, and that the consumer is willing to buy and has the money to buy with. While the shaking-down process in pig iron and near products has been going on, we hear of contracts being placed for armor-plate for Russia, bridges for Burmah, and as home buyers must now feel satisfied that bed-rock has been reached, orders for the wants of agricultural implement manufacturers and others will soon be placed. This will steady the market, and give a chance for more firmness than we have seen for some months. Conditions are favorable for a good Fall trade. Good crops, good prices for them, good money and confidence of the trading public are all here. The Presidential campaign and the Chinese trouble are the only drawbacks, but we believe they are not sufficient to prevent a good active business being done.

LOGAN-GREGG HARDWARE CO.

THE CLEVELAND TRADE.

Trade was excellent for July. Orders for wire and nails are unusually plenty as a result of the light purchasing earlier in the season. The same is true of many other lines of goods. A strong impression prevailed that trusts had put prices too high, and a determination existed among the dealers not to buy; the result is that stock is much depleted.

Manufacturers of some lines, owing to the trade being so light, became panicky and made prices lower to the cost of production than they were in '98. The custom of sending specifications for bids has been revived and competition has been fierce. Jobbers who were overloaded in some lines have competed with manufacturers, and the impression has been created that there was no bottom. Some staple lines are being sold within 10 per. cent. of the lowest price they ever reached.

These are our exceptions, and most lines are held steadily. Before September confidence will be restored and trade improved at remunerative prices. The waiting process is nearing its end. We are not to be gobbled up by trusts nor robbed of our freedom by imperialism, but business men will be kept busy to care for the demand. Those who have the goods that are wanted will be rewarded. There will be no place for pessimists in the Fall campaign. The people have been too busy to listen to them.

We have the right to expect that a definition of imperialism will be given by those who base their campaign on its denunciation, so that the people may know what sort of crime is being committed. It is to be feared, however, that the size of the word may be relied upon to inspire terror without definition.

The power of so-called "Trusts" to harm the public is modified by the sentiment of the public against them. Farmers, in the early part of the year, seem to have been united in a determination not to use wire in fencing, because they believed it would aid Trusts.

The erection of buildings costing millions of dollars has been postponed or abandoned to beat the Trusts. Since the American Steel & Wire Co. reduced the price on wire, farmers commenced buying freely, although the price is still high because they now think the company have abandoned the idea of robbing the public.

It is too late to recover the loss in building this year, but preparations are being made to push that work next season. If the manufacturers will now be satisfied with reasonable profits, their wheels will all be turning. The plentiful rains have helped to cure the effect of the earlier lack of them and late crops will be bountiful. With good Fall feed for stock, it should do much to overcome the loss caused by the small hay crop.

If we could be left to ourselves as a nation, we should be rich and probably grow mean and stunted. The ministers tell us that no soul is saved alone. Be this as it may, no nation ever grew great by being walled in. No man is a good citizen who is careless of obligations and lives for self alone. "On the topmost wave alone is life." Stagnation is dangerous to a nation's life. Strife and poverty seem necessary to make men, which is the only valuable national product. If cost is to be counted, it is well to estimate the expense of withholding. Nations must advance or recede. Repose produces one; activity the other.

A nation cannot dictate the activities of national life without considering the forces that sway the world. Notwithstanding our Declaration of Independence, we are subject to the power "not ourselves." We cannot shirk responsibility to save the cost without a greater sacrifice. First pure and then peaceable seems to be the law. It is more dangerous for a nation to grow rich than it is for an individual and it is quite as important that a nation has something to do, as the devil will find work for an idle nation as well as idle hands. A worthy wish to bear our burdens should be our first purpose if self respect is to be maintained.

The foundations of national life rest upon ability and willingness to fight if need be, and our interest in the law of nations has become large enough to demand our assistance in compelling obedience and we cannot afford to have it done without our aid. If this is imperialism every self-respecting American should be an Imperialist.

THE LOCKWOOD-TAYLOR HARDWARE CO.

THE COLUMBUS TRADE.

We have no complaint to enter as to trade so far this year, as every month shows a nice increase over corresponding months in 1899. Had prices been kept within reason by manufacturers, trade would have been still better by a large per cent. No one will deny the fact that sales have been curtailed on account of the unreasonably high prices asked by manufacturers. Had jobbers asked the full advance on goods, it would have been still harder on the consumer. Jobbers have been underselling manufacturers for the past 12 months, on almost all lines of Hardware. Every one knew that some of the boom prices could not and should not last and the result has been that every jobber has been bearing the market on some of the lines where manufacturers were holding them up. We are in favor of good liberal prices at all times, so all can make a fair profit from the digger of the coal and ore, all along the line to the consumer; but we are dead set against highway robbery. Prices are gradually settling back to their legitimate values and we hope manufacturers will not go to the other extreme as they did in 1897 and 1898; but they are queer "critters," and no one can tell what foolish things may be done. There are a number of new competitors in the field, that were hatched by the Combinations, and are very healthy roosters of the game variety. They will want some business and will no doubt get their share. If there were too many before, it certainly will not be any better now. We think the increased demand will require a good portion of the increased production, but it is doubtful whether the increased consumption will equal the

Digitized by Google

increased production. If it does not, manufacturers must curtail production or they will begin to cut each others' throats and then no one makes any money. The demand for wire and nails for the past two weeks has been very brisk and all are hurry orders, showing there is not much stock in the hands of the retailers. Farmers are through with their harvest, and now that the price is lower than it was in the spring, they are building fences. The corn crop never looked better and the frequent rains during the past two weeks have started the pasture and relieves milk venders from the necessity of using so much water in order to furnish the same quantity of milk per day for their customers.

THE SMITH BROS. HARDWARE CO.

THE CHICAGO TRADE.

Business with us continues good. While the month just ended is usually a light one, owing to vacations, yet the volume of our orders was beyond our expectations and very satisfactory. In fact, we were favored with some nice new stock orders, which in a manner were largely responsible for keeping up our July sales, also go to show that the confidence of merchants is being restored, and that they are buying on the present market, believing that prices now ruling will reasonably prevail during the balance of the year.

Aside from this, the recent advances in copper and lead, while slight, show a strengthening in the market on some raw materials, which enter largely into the manufacture of a great many articles of Hardware.

Seasonable goods are still moving freely, and staples are also going out in liberal quantities.

We anticipate a large August business, and from the start we are having, feel confident we will obtain the desired results.

WELLS & NELLEGAR CO.

THE ST. PAUL TRADE.

Crop conditions have improved immensely since July 1st throughout our territory, and reliable estimates make the wheat crop in the States of North and South Dakota and Minnesota about 50 per cent. of an average, which, with a probable advance over last year of 10 to 15 per cent. per bushel in the price, will result in a much better showing than we anticipated. The corn, oats, flaxseed and hay crop are not a full average, but if altogether we get 75 to 80 per cent. of an average amount of money we shall still do some business. This shortage will affect building operations more than any other thing, though we judge that necessities will be the rule rather than luxuries. Competition makes low prices, and probably they will continue low until real values are re-established. Orders are plentiful, but quantities small, as a conservative plan seems to have been adopted by everyone. Money receipts are as good as usual at this season of the year.

C. W. HACKETT HARDWARE CO.

THE MINNEAPOLIS TRADE.

Locally trade is rather quiet. Hot weather such as we have been having of late is quite sufficient excuse for this. We believe that later on conditions will be quite favorable. Rains, such as we had plenty of during July, have made a vast difference in the wheat crop, while everything else is in excellent condition, so we understand. Large sections of country that first of July they talked of plowing under and not cutting, now show up 8, 10 and 15 bushels to the acre, and while without doubt there will be a shortage and in some localities this will be quite serious, the crop as a whole will be fair in volume, while the quality is exceedingly good, unusually so. Wheat is somewhat higher than it was a year ago. Without much doubt, the amount of money received will be nearly as much. The worst feature of the situation is the fact that undoubtedly there are sections where the shortage will be serious, thus individuals will suffer. Prices are easing off a little generally, in some cases in anticipation of changes that have not already taken place, but which are expected.

Summer goods, such as refrigerators, ice cream freezers,

lawn mowers etc., are being forced off at no profit, rather than carry them over another season. Prices on these articles are affected very materially by the department stores, while builders' Hardware is frequently figured on margins of profits that will not pay running expenses. Last year we were able to get a profit without much difficulty. This year the tendency seems to be to sell regardless of profit.

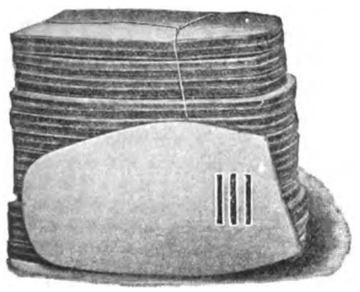
W. K. MORISON & CO.

THE DAVENPORT TRADE.

The condition of the wholesale Hardware trade is rapidly settling down to the old ways which prevailed for many years previous to the "boom" of 1899. Prices are slowly but surely dropping, margin of profits narrowing and the credit line is gradually lengthening. We rather wish that all manufacturers would follow the example of the American Steel & Wire Co. and drop prices at once to the very bottom. Why should it take three or four years of work and worry to find a point in the iron and steel markets below which prices cannot go? All conservative dealers in Hardware have recently laid by a goodly number of pennies for a rainy day. The shower would be more welcome now while they are so well prepared to receive it.

On August 15th Davenport is promised another Eastern Railway connection via our new road, the Davenport, Rock Island & North Western and the Indiana, Illinois & Iowa Railroad line.

We have no labor disturbances of any kind. There seems to be plenty employment for all at fair wages. Davenport is growing rapidly and there is a decidedly prosperous appearance throughout the city.



SICKELS, PRESTON & NUTTING CO.

THE SAN FRANCISCO TRADE.

After successive conferences August 3d with members of these retail Hardware houses, Philpot & Armstrong, Osborn Hardware & Tool Co., Bennett Bros., Palace Hardware Co. and Chas. Brown & Sons, and with A. L. Scott of the wholesale Hardware incorporation, Miller, Sloss & Scott, there was no other deduction to arrive at than that there has been no midsummer quiet in trade circles this year, July business having footed up beyond expectation, and all indications, barring a threatening labor trouble symptom that has developed in these early August days, are favorable for a record-breaking Fall trade.

The new labor trouble referred to, now being discussed by all Hardware dealers, appertains to planing-mill workers on both this and the Oakland side of the bay, the indication being that a general strike will shortly be declared. Over in Oakland the mill workers organized a union several months ago and have been urging the adoption in all of the mills of the eight-hour law. But their efforts have not been successful, for the Oakland and Alameda County Millmen's Association, which includes eighteen planing mills on the East

THREE-BAR LEATHER
shoe-soles and top-lifts (for heels) are the best.
Write us; we'll give you points.
Baxter Schenkelberger & Co,
350 Congress street, Boston

Side, has issued its edict that the association will resist the order of the Building Trades' Council to enforce the eight-hour schedule.

The members of the Building Trades' Council, on the other hand, are equally determined to fight the matter out for the mill workers. The mill workers themselves, however, are observing the strictest silence, apparently because they realize that the fight will prove a protracted contest on both sides. At present the East Side mills are paying employees from $2.50 to $3 per day of nine hours. The mill owners claim that their business will not warrant higher wages or shorter hours, and that through their association, organized for their protection against just such agitations as are now going on, they will stand out against the order issued by the Trades' Council for a reduced time schedule, which is to take effect August 15th.

"There will be a strike of some kind," said Secretary E. R. Hundley of the Burnham-Standeford Mill Co., one of the biggest concerns in the association of owners, "but just how extensive I am not in a position to say. The association decided at a recent meeting to hold out against the eight-hour schedule. Eastern mills are paying lower wages than are our local mills. They work their men from ten to twelve hours a day and pay only 75 cents freight on the finished product, while we have to pay $1 for the raw material. I do not see how we can grant shorter hours, although we would like to do so. We are handicapped as it is. Only a few days ago we were beaten out on a contract for a school house at Medera by a Puget Sound mill, which has raw material at hand and works its men from eleven to twelve hours. We cannot figure against such concerns, and this same competition we find right here in Oakland. The order of the Trades' Council simply means that we will either have to fight it or shut down our mills."

Frank L. Brown, who came to San Francisco seven years ago and took charge of the business of the Washburn-Moen Co., and when that concern was subsequently merged into the American Steel & Wire Co. became the Pacific Coast agent of the new company, has resigned from this business connection and will leave August 6 for Chicago to become the general sales agent of the Shelby Steel Tube Co. His departure from here is much regretted. On the afternoon of August 3d the employees of the Pacific works of the American Steel & Wire Co. assembled at the North Beach factory and presented Mr. Brown with a pleasing token, and on the same evening at the Cosmos Club a large number of his close business friends and associates in the Hardware and metal trade in this city tendered him a farewell banquet, at which Brace Hayden of the Dunham, Carrigan & Hayden Co. presided. A. C. Rulofson of Baker & Hamilton acted as toastmaster, and toasts were responded to by A. A. Watkins, of W. W. Montague & Co. and other prominent business men. A silver punchbowl and ladle were presented to Mr. Brown by his friends here in the Hardware and metal trade.

TRADES PRESS ASSOCIATION.

Auntie—Do you like Uncle Harry to give you a ride on his back?

Tommy—Oh, yes, but I had a ride on a real donkey yesterday.

German Iron Works at Bruckhausen.

Among the important iron works of the world, that of the Deutscher Kaiser Company at Bruckhausen on the Rhine presents features of interest well worth recording. Richard Guenther, our Consul-General at Frankfort, in a recent report, makes the following reference to the greatness of its capacity.

The Deutcher Kaiser Company, at Bruckhausen-on-the Rhine, has iron works of magnitude. The ground area is about 1,500 acres. The proprietors were originally a coal-mining company, holding about 25 square miles of coal fields, the output of which is placed at 3,300 tons daily. The first portion of the iron plant, constructed in 1890, was the Siemens' steel works, containing seven basic-lined furnaces. Blast furnaces and basic Bessemer converters were added in 1895. The completed plan includes six blast furnaces 82 feet high. Two compound twin-blowing engines with 6 1-2-foot cylinders and 5-foot stroke are provided for each furnace, whose daily output is from 250 to 300 tons of basic metal. The coking plant includes 256 ovens, of which 188 are at work. The total output will be about 30,000 tons of coke monthly, with 1,200 tons of tar, 400 tons of sulphate of ammonia, and 300 tons of benzole as by-products. The Bessemer plant includes four 15-ton basic converters, with a present output of 20,000 tons of ingots monthly, and also a cogging mill in direct communication with the rolling mills, arranged for the conversion of ingots into rails, billets, or medium-sized joists at a single heat. There are six rolling mills, with a total capacity of 30,000 tons of finished iron and steel per month. The accessory machinery is for the most part served by electric motors, the generators being supplied with steam from boilers fired with blast-furnace gas. Nothing has been spared in the way of equipment to make these iron works the most productive in the Rhenish Westphalian district.

The Bliss-Chester Co., Providence, R. I., has recently been organized to manufacture the line of metal goods indicated under the heads of metal novelties, sheet metal stampings, electrical and Hardware specialties, which it is their intention to produce in brass, copper, aluminium, sheet steel and malleable iron. They make a specialty of brass shells and are thoroughly equipped to make all kinds of cupped work, caps and the articles enumerated above. Mr. Bliss of the firm, who will be the gentleman to look after the interests of the trade on the road, has for the last nine years been connected with the Mossberg Mfg. Co., Attleboro, Mass., and later with the Mossberg & Granville Mfg. Co., Providence, R. I., who are well-known manufacturers of rolling mills, drop presses, power presses, and sheet metal working machinery. Mr. John Chester, who will superintend the manufacture of the product of the new company, was for several years connected with the Waterbury Brass Co., Waterbury, Conn., and later held the position of superintendent of the Providence Gas Burner Co., Providence, and has consequently had a large experience in manufacturing cupped and sheet metal goods. We wish the new company every success, and have no doubt they will achieve it.

Improved Carpenters' Tools.

SOLD BY ALL HARDWARE DEALERS.

Ads. That Kick Back.

Extravagant offers create wrong ideas of values in the minds of ad. readers and make it more difficult to appeal to these same people with straightforward honest advertising, because such offers teach these people to expect too much for their money, remarks *Advertising Experience*. They get such extravagant ideas that it becomes almost impossible for the legitimate dealer or mail-order house to please them.

Exaggeration and clever juggling of words which is so prevalent in certain classes of advertising to-day is doing as much harm as the out-and-out dishonest advertising is to undermine the confidence of ad. readers in all advertising. This subtle kind of dishonesty is even more dangerous than is the straightforward dishonesty of some advertisers, if it may be called such. People who are wronged by such advertising, if they are not led on by the very charm that the taking of risks may have for them, learn to regard all advertising as being at least exaggerated and to be taken with a grain of salt.

All such dishonest and scheme advertising and all low-grade advertising, honest though it may be, tends to discourage the better classes of people from looking through the advertising pages of periodicals which contain this class of advertisements.

Money of Leather and Tin.

Various commodities have, at different periods of history, been employed as money. Nations of hunters used the skins of beasts for this purpose. Beaver skins were thus employed in the territory of the Hudson Bay Co. Nations of fishermen used fish, pastoral tribes cattle, and agricultural people wheat or some other product, such as cacao in Central America, tobacco in Virginia and Maryland. All nations have so used ornaments, cloth stuffs or weapons. It was probably in the form of tools that brass was first used as money. At a later period metal circulated in the shape of bars or ingots, and then of discs. Mercury has been used as money among the miners of Mexico, leather in Russia, tin in China, pepper in Abyssinia, rice in the Philippine Islands, diamonds in India, dried codfish in Newfoundland, eggs in Alpine towns and oats in Estramadura in Spain. The universal quality to be found in money, therefore, is that it is a commodity possessed of intrinsic value or general utility in a greater or lesser degree. It has never been a mere sign, even when in the form of paper, for the paper was always a titled deed to a commodity that circulated or had circulated as money, to be surrendered on receipt of the money commodity. After having constituted the principal material of coin, copper made way for silver, and in recent times silver has yielded its supremacy to gold.—*Boston Herald.*

Cork is about the most buoyant substance there is, but a cork sunk 200 feet deep in the ocean will not rise again to the surface, owing to the great pressure of the water. At any less distance from the surface, however, it will gradually work its way back to light once more.

"Did you ask old Spiggot for his daughter?"

"No. The first thing I saw when I stepped into his office was a big placard over the 'phone with these words in large letters: 'Call Main 6161 for Ambulance.' It seemed like an omen and I went out."—*Ex.*

HARDWARE MANUFACTURERS' RECORD.

Hardware manufacturers over the country, are requested to contribute to this page. News of new factories or companies, changes, improvements, etc., will be gladly received, and promptly published.

New Companies, Etc.

Bridgeton, R. I.—The Bridgeton Knife Co., a new corporation composed of local business men, has begun active operations in this town. The plant is located at the Hopkins Machine Works and is equipped with up-to-date machinery.

Chicago, Ill.—The Ball Automatic Bolt Lock Co. has been incorporated; capital, $250,000; manufacturing railroad and other appliances; incorporators: Samuel C. Ball, Charles E. Davis, Wiley Mills.

Cleveland, O.—The E. B. Davidson Rubber Co. has been incorporated with a capital stock of $20,000, by E. B. Davidson, C. A. Davidson, H. R. Sanborn, John S. Gorman, Geo. B. Clements.

Columbus, O.—Articles of incorporation of the Columbus Handle & Mfg. Co. have been authorized by the Secretary of State. The company is organized to manufacture farm and garden tool handles, wooden novelties, chair and bent wood stock and lumber and to deal in logs, timber lands and real estate. The capital stock is $30,000 and the incorporators are Harry D. Hale, J. W. Breece, James S. Hale, S. E. Jones and H. D. Valentine.

East Orange, N. J.—The Universal Spring Nut Lock Washer Co. has been incorporated to manufacture Hardware; capital, $200,000; incorporators: George W. Mart, Alfred G. Brown and Edward B. Hawkins.

Hartford, Conn.—The Winkley Co. has been organized in this city to manufacture buy, sell and lease machinists' and other working tools, etc. The capital is $15,000 The subscribers are: W. E. E. Strong, of Detroit; C. I. Overton aand F. V. Bartlett of this city.

Los Angeles, Cal.—The Dodge Bros Co. has been incorporated with a capital stock of $50,000. Los Angeles will be the company's principal place of business which is to deal in cash registers, type writers, adding machines and other mechanical devices. The directors are S. C. Dodge, H. A. Dodge, M. P. Dodge, E. A Dodge, all of Los Angeles, and F. H. Taft of Santa Monica.

Marion, Ohio.—The Marion Thresher & Separator Co. has been incorporated.

Milwaukee, Wis.—The Patton Paint Co is the name of a new concern which has been incorporated with $300.000 capital and which will build a large factory in this city The new company has been organized to carry on the manufacturing hitherto done by the James E. Patton Co. The officers are the same as those of the old company as follows: President, James E. Patton; vice-president, James E. Patton, Jr.; secretary, Ludington Patton, Jr.; to this end there will be erected an additional building 50x140 feet in dimensions and four stories high, immediately to the east of the present buildings at Lake and Barclay Streets. It will include an office and store rooms, besides additional factory facilities. The old building, about 40x300 feet, will continue to be used partly for manufacturing and partly for the jobbing branch.

New York, N. Y.—The H. L. Judd Co. has been incorporated to carry on a Hardware and upholstery business; capital, $350,000; directors: John Day, New York City; William H. Edsall, Wallingford, Conn.; A. L. Woodworth, Brooklyn.

Port Jervis, N. Y.—The Gordon & Malvern Co. has been incorporated to manufacture stoves, plows and castings; capital, $42,000; directors: E. M. Gordon, H. H. Malvern and J. Wallace Gordon, of Port Jervis.

Rockford, Ill.—The Rockford Well Drill Co. has beeen incorporated; capital, $10,000; manufacturing well-drilling machinery and agricultural implements; incorporators: Murray F. Thayer, Ernest C Thayer, F. H. Green.

Streator, Ill.—The Wenzelmann Mfg Co. has been incorporated; capital, $5000; manufacturing and dealing in furniture and implements; incorporators, Gustave Wenzelmann, Ed. H. Overholt, W. H. Boyse.

Trenton, N. J.—The McLean Arms Co. has been incorporated here with an authorized capital of $6,000,000. The company is to manufacture and improve arms for infantry use. The incorporators are Marcellus Hartley, Charles M. Dully, J. W. Cowles, F. W. Kitchen, M. A. Brady, S. A. McLean, J. J. Oster, W. A. Condit, Charles R. Flint and W. G. Montgomery, all of Jersey City.

Changes and Improvements.

Adrian, Mich.—The Hillsdale Screen Door Co. will remove to this city. The firm employs 50 workingmen.

Cohoes, N. Y.—Fred. W. Peck, proprietor of the axe factory destroyed by fire in Cohoes, Saturday, June 30, has rented a portion of the building occupied by the Portable Forge Co., at Lansingburgh, and will use room to finish and temper the axes and hatchets that are being removed from the ruins. He expects to save considerable property in that manner.

Cuyahoga Falls, O.—The wire and nail plant of the E. A. Henry Wire Co., which was established here one year ago, has just completed increasing the capacity of its annealers and bakers and added a new wire drawing machine, which will double its capacity.

Manchester, Conn.—Cheney Brothers having completed the work on the addition to the group of mills south of Forest Street, are contemplating the erection of another mill across the street. The location will be directly west of the north wing of the new mill group, running through from Elm to Pine Streets. The dimensions will be about 50x300, and three stories high. The material will be brick and the style of construction will be similar to that of the group of mills north of Forest street.

Newark, N. J.—Mersfelder & Voigt, manufacturers of Hardware specialties, are about to erect a two-story brick factory on the corner of Avon and Jelliff Avenues. It will be 34x75 feet in dimensions, and will cost about $9000.

Quincy, Ill.—The work of staking off the ground of the Sheridan Stove Mfg. Co. for the new molding room has been begun. The building will cost $7,000, and will be built over the culvert and to the north of the Beebe buildings, which have been leased by the company. The new molding room will accommodate thirty molders. It is to be ready for occupancy by the first of September.

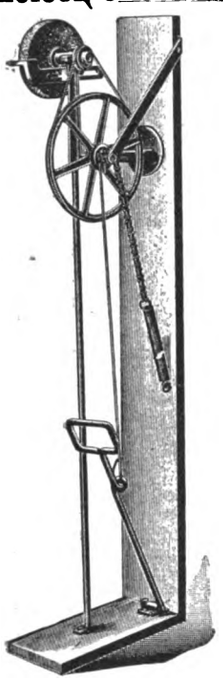
St. Louis, Mo.—Charter Oak Stove & Range Co. have filed notice of increase of capital from $100,000 to $200,000.

Syracuse, N. Y.—The Bradley Mfg. Co., engaged in the manufacture of trip hammers, has added to its plant new machinery, and has a force of about eighty-five men.

Syracuse, N. Y.—The new building which the Syracuse Stove Works is erecting in North Geddes Street is rapidly nearing completion and is about ready for occupancy. The building is of brick construction with a gravel roof and cement floors, making it fireproof. The dimensions are 30x75 feet. The building will be used for storing patterns and will double the company's storage capacity for this product.

Trenton, N. J.—The Atlas Tack Co., which was recently purchased by H. H. Rogers, of the Standard Oil Co., has been reincorporated, with a capital of $780,000.

Westport, Ind.—The Whitney & Shroyer handle factory machinery is being shipped from this town to Selma.



Wichita, Kans.—The Wichita Stove & Iron Works, owned and operated by W. D. and G. L. Moore, are planning extensive repairs. The firm, having purchased the lot on the corner of Sante Fe and First Streets, will immediately commence the erection of a new foundry building. The lot is 300x200 and the plant will practically cover all of the ground. The present building will be used for the manufacture of stoves and other small work, while the new building, which will be much the larger, will be for the large architectural iron work.

Miscellaneous.

The stockholders of the Wilkinson Shear Co. held a meeting recently and elected the following directors: J. H. Cheetham, George A. Hoskins, Charles S. Prizer, H. W. Stehman and John M. Archer. The board immediately reorganized with Mr. Cheetham as president, and Mr. Archer secretary and treasurer. D. H. Keiser was elected superintendent of the plant.

Columbian 1000-Shot Air Rifle.

Patented Oct. 24, 1893.

CHAMPION MODEL.

This Air Rifle possesses advantages over all the Air Rifles now on the market. The materials used in its construction are the best. The appearance and workmanship is far ahead of any other Air Rifle made. It has an adjustable sight it shoots stronger and more accurate, less liable than any other to get out of order, all parts are interchangeable. We think we have the right to claim this as the "Champion" of all Air Rifles. **List, per doz., Enameled, $30.00; Full Nickel, $42.00.**

PRICES CURRENT.

The prices noted in this Prices Current are intended for the Hardware trade only, and for such quantities as are usually purchased by retail dealers. They are carefully revised and represent quotations at which purchases can be made. Very small quantities, and broken packages, frequently make higher prices necessary.

Subscribers are requested to notify us of any discrepancies, as we desire to make this department of our paper worthy of their constant attention.

The list prices, from which discounts are given, will always be furnished the dealer upon request, by the manufacturer quoted.

BEEN WITH YOU FROM THE BEGINNING.
Union Metallic Cartridge Co., New York. [Ammunition]: We have been with HARDWARE as advertisers from the beginning and expect to continue.

HORSESHOE MAGNET HAMMER.
WARRANTED.

Fitted with long handles. A specialty for billposters and traveling advertisers; also useful in other trades.
Superior to any magnetic tool heretofore made.
ARTHUR R. ROBERTSON, Patentee and Sole Mfr.,
144 Oliver Street, Boston, Mass.

"COULD NOT KEEP HOUSE WITHOUT IT."
Sickels, Preston & Nutting Co., Davenport. Iowa. [*Wholesale Hardware*]: We would not know how to keep house without HARDWARE. The review of the Hardware markets, trade reports and editorials are frequently read before letters are opened that are received in the same mail with HARDWARE.

"THE MOST HELPFUL AID."
Pike Mfg. Co., Pike Station, N. H. [*Whetstones, Oil Stones, etc.*]: We like to keep our name and our wares before the public in a modest way. We have found HARDWARE the most helpful aid toward accomplishing that purpose.

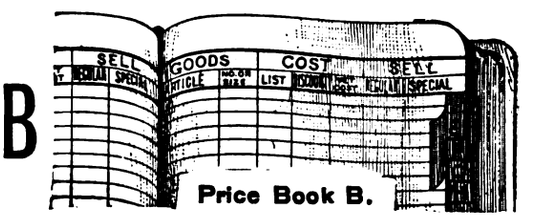
HARDWARE PRICE BOOKS.

Arranged by R. R. WILLIAMS, Hardware Editor of The Iron Age.

These Price Books are made in a variety of sizes and styles adapted to pocket, store or desk use, and are specially arranged to meet the requirements of the Hardware and Metal trades. They are printed on paper of superior quality and bound in grain seal leather.

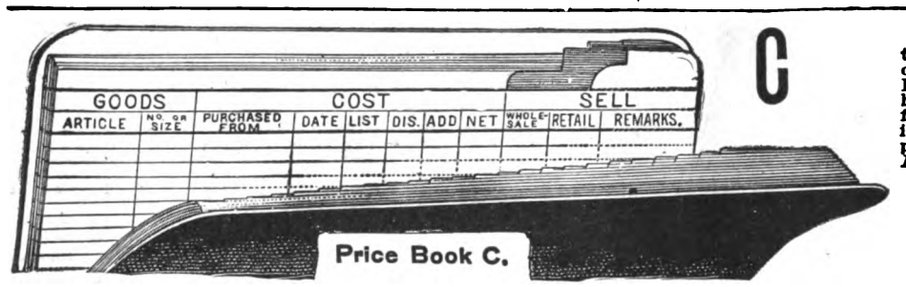


Price Book A.

Columns are provided for the name and number or size of goods, for noting from whom purchased, date of quotation or purchase, list and discount, and for entering freight expenses. Under the heading of selling prices, the regular and any special price or remarks in regard to the goods are given place. ***Size of page, 4 x 7 inches.***

FOUR EDITIONS:

A, 200 pages, - - $1.00 **A 2**, 400 pages, - - $1.50
A F, 200 pages with flap, 1.25 **A F 2**, 400 pages with flap, 1.75



Price Book B.

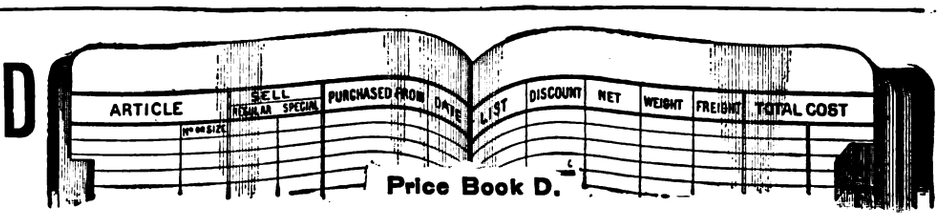
In this book each page is complete in itself, and the record of prices does not, as in Book A, run across two pages. Thus it accommodates a larger range of goods with much less detail in the record. By the use of familiar abbreviations is sufficiently large for the convenient and concise record of prices. ***Page, 4 x 7 inches.***

FOUR EDITIONS:

B, 200 pages, - - $1.00 **B 2**, 400 pages, - - $1.50
B F, 200 pages with flap, 1.25 **B F 2**, 400 pages with flap, 1.75

Price Book C.

The headings in Book C run across the top, in a line parallel with the hinge. The details of weight and freight contained in Book A are omitted, and a single column headed "Add" given for the insertion of freight or other expenses. Under the selling prices space is left for the wholesale price, the retail price, and for remarks. ***Page, 4½ x 7¾ inches.***



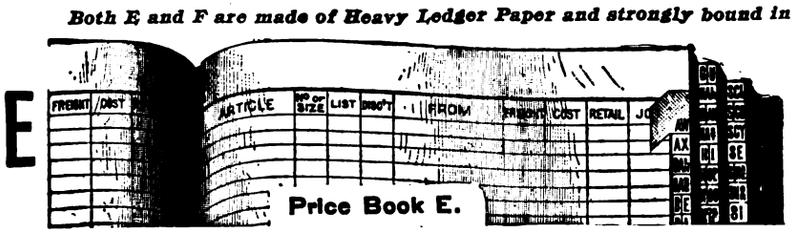
FOUR EDITIONS:

C, 200 pages, - - - $1.00
C F, 200 pages with flap, - 1.25
C 2, 400 pages, - - - 1.50
C F 2, 400 pages with flap, - 1.75

Suitable for desk and store use, and for salesmen on the road. A number of pages at the back of the book are arranged for memoranda. ***Page, 5¼ x 8 inches.***

FOUR EDITIONS:

D, 200 pages, - - - $2.00
D F, 200 pages with flap, - 2.50
D 2, 400 pages, - - - 3.00
D F 2, 400 pages with flap, 3.50



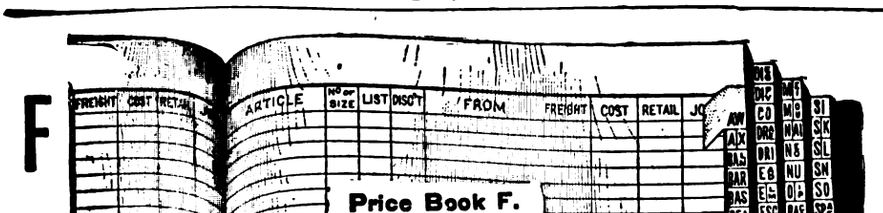
Price Book D.

MULTIPLE INDEX PRICE BOOKS.

A special feature of these books is the index, which is arranged with special reference to the classification of Hardware Goods, each index character giving the first two or three letters of the names of Hardware articles. There is an index character to every page, enabling immediate reference to any of the contents of the book. The ease and convenience with which the books can be used is indicated in the following examples, taken from Book F:

For Augers, turn to AU For Chisels, turn to CHI For Iron, turn to IRO
" Parers, Apple " PAR " Cutlery, " CUT " Irons, " IR'S

Both E and F are made of Heavy Ledger Paper and strongly bound in grain seal leather.



Price Book E.

AD GU SCI
AN HAM SCR
AU HAN SCY

HARDWARE

The Lewis-Wedum Co., Glasgow, Mont., are making improvements in their store and have recently placed an order with the J. D. Warren Mfg. Co., of Chicago, for a complete equipment of Warren Cabinet Shelving for same.

J. A. Horton, who formerly represented the Mossberg & Granville Mfg. Co., Providence, R. I., at their New York office, has been promoted, and is now in charge of the correspondence bureau of the firm at the main office in the above city. To the New York office, F. O. Adams has been appointed as his successor.

In the advertising columns of our "Hardwaremen's Exchange" will be found the advertisement of Griswold, Maloney & Co., Elmira, N. Y., who desire to dispose of their entire business in that city, and are willing to make favorable terms with a desirable purchaser. As this is an old and well established business, it affords an opportunity for entering in the Hardware business which should prove attractive at the present time.

Fox Cutlery Co., Dubuque, Iowa, recently made a change in their high grade manufacturing, dropping the more general line in the way of cutlery, and using their extensive facilities for the exclusive manufacture of their celebrated Fox razor. They state that the results obtained have been of the most gratifying character, and their trade has been very largely increased, in consequence, which they hope will continue to be the prevailing feature of the business.

Patterson, Gottfried & Hunter, 146-150 Centre Street, New York, have recently issued a card hanger of generous size, 11x4 1-2 inches, which they use in extolling the Nicholson "Great Western" XF files, for the sale of which they have the agency. As these files—the term "XF" signifying extra fine—are largely used by jewelers, watch and tool makers, and for similar fine work in which the best material and superior workmanship are required, and they form a very important part of the stock of this well known firm.

There is some prospect that George H. Barbour, Vice-President and General Manager of the Michigan Stove Co., Detroit, Mich., may be nominated for Congress in his district. We hope that may prove to be the case, the successful result of which can not be questioned. Mr. Barbour is possessed of all the qualifications necessary to make a successful Congressman, and in the larger field afforded by political preferment will no doubt become a shining mark. His addresses before Hardware conventions and other similar opportunities prove him to be possessed of the necessary oratorical talent to present to any gathering of men the progressive views of an advanced thinker, which, in the arena of national politics, would make him more than ever a leader of men.

Among our exchanges we have for years been interested in the good old Stamford *Mirror,* published at Stamford, Delaware County, N. Y., and have regarded it as one of the best local newspapers published in the smaller towns of the State. The veteran editor, Simon Bolivar Champion, who has ever since the foundation of the paper occupied the editorial chair, is just completing his fiftieth year in that responsible position, and to all appearances is just as ambitious and full of interest in current events as he was in the early days when ambition alone guided his editorial pen. Some of his old companions, Jay Gould especially—who was an early employee in his printing office—have succeeded in accumulating more wealth, but Simon still clings to the old sanctum where so many happy years have been passed, and where we trust his fiftieth anniversary will come loaded with good things.

The Luthe Hardware Co., Des Moines, Iowa, announces that on Aug. 27th their newly organized exclusive wholesale Hardware house will be ready to transact all regular business. Being located in the new and commodious building constructed especially for their use and subsequently equipped with all modern facilities for doing business on an extensive scale, they promise progressive Hardware buyers an exceptionally prompt service in the execution of orders intrusted to them. It is their intention to carry a complete stock of all such goods as pertain to the Hardware business in all its fullness. As the opening occurs in the week of the Iowa State Fair, they take pleasure in inviting all who may attend that have any interest in the Hardware business. They believe they can make it pleasant to their visitors and impress them with their ability to do a successful business.

We are pleased to learn by late reports from Davenport, Iowa, that Col. J. R. Nutting, of the Sickels, Preston & Nutting Co., is regarded as having a front seat in the affections of Governor Shaw, which may possibly land him in the vacant Senatorship caused by the death of United States Senator Gear, of that State. This, although only for the short term, expiring in 1901, would naturally be a stepping stone to the Colonel's continuance in that highly distinguished position. Col. Nutting is recognized as being a representative Republican, who never hesitates to go to the front in the interest of the party, whose means they have always been permitted to bank upon; loyal to a fault to his political principles and convictions, the Hardware trade will back us up in the opinion that the Governor could not make a more honorable or satisfactory choice in the filling of the position referred to.

A free day school for instruction in technical science will be opened at Cooper Union, New York City, on October 1. It is the design of those inaugurating this desirable addition to our schools that the course of instruction should supplement the complete scientific course now given by the High Schools of this city, affording by this method of advancement for the graduates of those schools, the facilities for studying the line of work advantageous to those who intend to engage in engineering work of any kind, which will include mechanical, electrical and civil engineering. The course will require three years of study. For the first year the work of all the students will be substantially the same, but at the beginning of the second year it will be diverted in a way to meet the requirements of the three several kinds of engineering work referred to. No examination for admission to either course will be required of applicants who can bring certificates giving the necessary evidence that they have completed the required course of mathematics of the High Schools of the city, at the same time certificates of other schools and academies will also be accepted. It is assumed that each student taking the regular course will be engaged in some class exercise from two to three hours a day. The hours for lectures and recitations will be between 9 a. m. and 3 p. m., but a programme yet to be announced will give more particular information regarding the time of recitations, etc. Application blanks may be obtained by personal request at the office of the Cooper Union, or by letter addressed to the Assistant Secretary, when all the necessary particulars may be obtained.

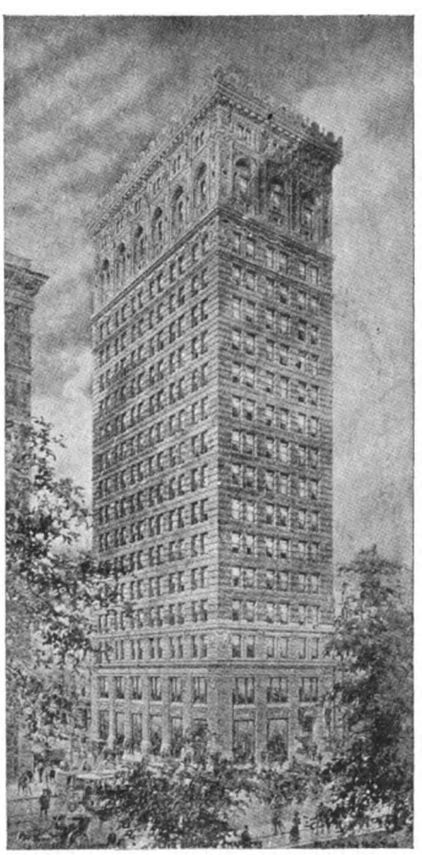
HARDWARE



VOL. XXI. AUGUST 25, 1900. NO. 10.

HARDWARE is a Review of the American Hardware Market, specially devoted to the Retail Trade. Published the 10th and 25th of each month, by the HARDWARE PUBLISHING CO., No. 275 BROADWAY, NEW YORK.

Subscription, $1.00 per year. Subscription, Foreign, $1.50 per year.

L. E. MITCHELL, - - President.
A. P. MITCHELL, - - - Secretary and Treasurer.
W. C. BRUNDAGE, - - Business Manager.
HENRY HOPKINS, - - Editor.

The Circulation of "Hardware" is Larger Than That of Any Other Paper in the United States Devoted to the Hardware Trade.

The office of the Hardware Publishing Company has been removed to Broadway Chambers, Nos. 273-277 Broadway, New York.

Editorial Trade Review.

Reports continue of the most favorable character from every quarter; salesmen having all finished their well earned vacations have gone on the road working in the interests of the houses they represent, and report the most satisfactory possibilities for the season.

Crop conditions are so much better than were anticipated that both wholesalers and retailers are feeling jubilant over the prospect. In every direction good prices seem to be promised for the productions of our farmers and planters.

In regard to the Hardware industry, prices are undoubtedly at the lowest possible mark for this period of waiting, and reaching forward from this date indications point to a gradual hardening in the quotations, and further concessions it is scarcely safe to expect.

Jobbers, after having been extremely anxious to unload the excessive stocks that bothered them in the Spring, are again in the market with encouraging orders, and the brightest hopes seem to prevail of any Presidential year within our remembrance.

Much lower prices in nails and wire are not anticipated under the present satisfactory outlook. The demand for these leading staples being sufficiently large to warrant the belief that present prices can be safely maintained, and jobbers more than satisfied by a continuance of present conditions.

The impression among most of the jobbers is gaining ground that a firm stand at this time in regard to the downward fluctuations so recently affecting the market would be beneficial to the opening of an encouraging Fall trade, and they feel that an announcement from several of the leading manufacturers that no further concessions need not be looked for would indicate that the bottom was reached, and a steady business be at once progressing.

The Iron and Steel markets are held from any retarding influences arising from over-production by the stoppage of the productive facilities to some extent, which, while not causing any scarcity in raw material, will serve to check any speculative feeling becoming prominent that might bear the present market and create a feeling of doubt as to the ability of the producers to sustain it.

Retailers' stocks throughout the country have been held in normal condition during the Summer months, with the exception of the purchases made from the goods distributed by over-loaded jobbers, who were compelled to name tempting figures in order to reduce their own holdings.

The jobbers' travelers find the retail dealers' want book filled with a fine assortment for current requirements, and while orders are coming in, not always for large quantities, they cover so large a field in the way of variety that for conservative buying show up unusually good sized bills to gladden the hearts of the wholesale merchants, and cause the drummers to wear a perpetual smile over the happy condition of affairs in general.

The export trade cannot but be benefited by the lower trend that has been given to prices in so many leading lines, and the reports of this great outlet for our productions of hardware and supplies, will be watched with eager interest for months to come. It is well known that our active exporters are searching every inch of the export possibilities in many countries yet to be conquered commercially, and the present prices would indicate a wider distribution than ever was imminent.

The destruction by fire of one of the largest axe plants in the country will lessen the competition in this line to some considerable extent, and naturally stiffen prevailing quotations. The large orders already placed on the books of the concern whose works were destroyed, will need to be re-ordered or provided for in some way; and as orders for the coming season were many of them booked in the earliest months of the current year, the axe industry will be able to feel an unswerving confidence in the good business of the coming Fall and Winter.

No more encouraging or permanent belief can back up the optimistic feeling everywhere prevailing than the knowledge of the healthful condition of the money

Digitized by Google

market and the fact that collections are more than usually good. Money needed for the advancement of trade conditions or for the promotion of improvements in the building trade, is readily obtainable at low rates.

Failures are very few among merchants doing a conservative business, and those avoiding all outside speculation. Banks have been extremely liberal with such dealers, and, when necessary, perfectly willing to extend their financial favors, especially where such promising prospects are close at hand; thus aiding in every way the fostering of the prosperous conditions which are the most hopeful sign of a successful future.

Exports of Builders' Hardware, Tools and Sewing Machines.

Exports of American tools and machinery do not show the shrinkage in volume which recent reports would indicate. Some concern has been expressed by leading export houses by reason of a falling off in foreign orders due to the high prices of iron and steel. In this connection it will be interesting to note that the exports of builders' Hardware, saws and tools during the fiscal year 1900 were the largest in the history of our export trade, being $9,646,017, against $7,842,372 in 1899, $6,627,466 in 1897, and $5,509,188 in 1896, prior to which year the exports in this line had never aggregated so much as $5,000,000. In exports of sewing machines, typewriters, electrical and other intricate machinery there are also gratifying increases. Comparing the export figures of the fiscal year just ended with those of 1898 and 1899, it is found that sewing machines increased from $3,136,364 in 1898, and $3,264,344 in 1899, to $4,540,842 in 1900; electrical machinery, from $2,052,564 in 1898, and $2,736,110 in 1899, to $4,328,917 in 1900; locomotive engines, from $3,883,719 in 1898, to $5,592,403 in 1900; typewriters, from $1,902,153 in 1898, to $2,697,544 in 1900; metal-working machinery, from $4,618,683 in 1898, to $7,193,390 in 1900; and all other machinery, from $13,336,930 in 1898, to $21,913,202.

While our chief market for machinery is still to be found in European countries, an increasing proportion is being sold in the Far East, especially in British Australasia, Japan and India. In 1898 our exports of builders' Hardware and tools to British Australasia amounted to $877,635, in 1900 they aggregated $1,325,793; in 1898 our exports in this line to Japan were $76,500, while in 1900 they were $106,251. Our exports of typewriters to British Australasia in 1898 amounted to $60,039, while in the fiscal year 1900 they were $101,002; to Japan the exports of typewriters in 1898 amounted to but $4220; in 1899 they had increased to $7262, and in 1900 to $16,579, of which sum $2211 were exported during the month of June alone, thus forecasting in some degree the possibilities of future development in this article of export. Commenting upon the increase in exports of typewriters, a prominent American manufacturer is quoted by the New York *Commercial* as saying:

"The demand for American typewriters was never greater, and our machines are pretty good globe-trotters. We have just made a shipment to Puntas Arenas, on the Straits of Magellan, at the extreme southern point of South America, and another lot of typewriters has been sent north to Vladivostock, Russia, for the use of the Imperial Government. Many of the missionaries and foreign business men in China use our machines, and nearly every American regiment in the Philippines has from three to five machines; and as business increases at Manila under American auspices, there will be a big demand for typewriters. The typewriter has become well nigh universal in its use, and is found in all the large business houses in the principal cities of the world, and its keyboard represents nearly all languages. The exceptions are the Japanese and Chinese. As their characters are upright and composed of many hundred figures or signs, it seems practically impossible to produce them on the typewriter's keyboard."

The following table shows the exports of builders' Hardware, tools, sewing machines and typewriters from the United States in each fiscal year from 1890 to 1900. The exports of typewriters cannot be separately shown for the years prior to 1897, as prior to 1897 typewriters were published in the reports of the Treasury Bureau of Statistics under the general head, "Machinery," not elsewhere specified:

Fiscal year.	Builders' Tools and Hardware. Dollars.	Sewing Machines. Dollars.	Typewr's. Dollars.
1890	3,851,397	2,793,780	——
1891	3,858,397	2,883,577	——
1892	4,210,132	3,133,992	——
1893	4,551,342	2,476,446	——
1894	4,424,278	2,347,354	——
1895	4,468,278	2,260,139	——
1896	5,509,188	3,139,249	——
1897	6,627,466	3,340,241	1,453,117
1898	6,428,332	3,136,364	1,902,153
1899	7,842,372	3,264,344	2,449,205
1900	9,646,017	4,540,842	2,697,544

Death of John Pritzlaff.

John Pritzlaff, the founder of the John Pritzlaff Hardware Co., of Milwaukee, Wis., died at his home in Milwaukee on the evening of Aug. 16th of diabetes. He was in his eightieth year. Mr. Pritzlaff was born in Germany in 1820, and when 19 years old landed in New York city without a cent of capital. Working his way westward, he reached Milwaukee in 1841 and worked on farms and as cook on a steamer. Two years later he entered the Hardware business as a porter for Clark Shepardson, his pay being $200 a year and lodgings. Mr. Pritzlaff's faithful service was rewarded by constant increases in salary. The business he was associated with saw several changes, but each new owner was glad to keep the faithful employe who put in 15 or 16 hours a day. April 1st, 1850, the sign John Pritzlaff & Co. appeared over a modest retail Hardware store at 299 Third Street. The "Co." were A. F. Suelflohn and Henry J. Nazro, the last named gentleman putting in the capital, while Messrs. Pritzlaff and Suelflohn put in the work. In 1853, later A. F. Suelflohn's interest was bought out by his partners for $3,300. The business steadily increased. In 1866 the firm became John Pritzlaff, and in 1884 it was incorporated under its present name of the John Pritzlaff Hardware Co.

No finer representation of the possibilities this country affords to an honest worker can be found than in the life of this pioneer in the Hardware business of the West. Coming here a penniless emigrant and rising from his own humble efforts, step by step, to the proud position of proprietor of one of the most important Hardware houses in the country. He was possessed of a love for work, a hopeful ambition to succeed in his business; frugal, honest, energetic and prudent, he arose above every obstacle to his deserved eminence, giving an example to many despairing seekers for future achievements, and proving an inspiration to countless workers not to falter by the wayside, but press ever on.

His kindness of heart was known and acknowledged on every hand; charitable and benevolent to a fault, few but those he benefited will ever know his countless benefactions.

Concentration.

Did you ever stop and think what concentration has accomplished in this world? Napoleon's famous maxim was: "Always concentrate your forces; never divide them." This maxim made him the conqueror of all Europe. His enemies spread out their bigger armies, but he gathered his together and struck at one point! His concentration won every victory. Ask any man who is famous as a marksman with the revolver or rifle, and he will tell you that the most wonderful shooting is done when you see only one thing—the bull's-eye. When you find everything fading out of your vision, and you are conscious that there is only one thing that your eyes see, namely, the target—then expect a wonderfully good shot. The same rule applies to business.—*Exchange.*

LEGAL CORRESPONDENCE.

Conducted by William Marston Seabury, Attorney and Counsellor at Law, No. 43 Cedar Street, New York.

Any subscriber to "HARDWARE" is privileged to ask any legal question he pleases in this Department and it will be answered free of charge. Address all communications to Editor "HARDWARE," No. 277 Broadway, New York City.

QUESTION.—Kindly answer the following questions through your valuable paper. First: Man and wife owned a house, the property standing in the names of both; at the death of the husband is it necessary for the wife to have the house transferred to her name before she can sell it? Second: Must she consult a lawyer, or can she buy a certain printed form of deed which she can have filled in by any notary public? Third: If the husband left no will and left one child, is the child entitled to one-third of the real estate held as I have described? Fourth: If the wife dies without a will can the relatives claim any of the estate?

REPLY.—Real property in New York State held by husband and wife in the names of both is, in the absence of special circumstances indicating a different intention, held by them as an estate by the "entirety." One of the instances of this estate is that property so held at the death of either the husband or wife becomes the sole property of the survivor. It would therefore be unnecessary upon the death of the husband for the wife to have the house transferred to her name; at his death she would become the sole owner. Second: A printed form of deed can readily be obtained; so also may a notary public draw a deed; but we would advise you not to employ a notary, as notaries are not supposed to be familiar with questions affecting the title of real property which are of the utmost importance. We would advise you to consult a lawyer. Third: As to the real estate held as mentioned, upon the death of the husband, as we have stated, the wife would become the sole owner and the child would have no interest. Fourth: If the wife should die possessed of this property after the husband and should leave no will, the property would descend or pass to her relatives in accordance with the statute of descent.

QUESTION.—I received injuries some time ago which caused me to lie idle for six months. I wrote to the company for which I worked and in the employ of which I was injured, asking for money. If I sued the company will it hurt my case to have received money from them? I find that I continue to grow worse, and the result of the injury promises to be very serious.

REPLY.—Your case would not be affected by your having received money from the company from which you received your injuries, provided, however, it was understood when you received this money that you in no way released your right against the company for the injuries in question. If you contemplate suit for this accident you should be careful not to sign any instrument releasing your employer from liability for this injury.

QUESTION.—Two weeks ago I gave a chattel mortgage on some goods in my store. The goods were not delivered, but remained in my possession. When I made the mortgage I told the mortgagee, who was a friend of mine, that I had creditors, and that I made the mortgage to prefer him above the other creditors. My friend left the city the day I made the mortgage and has been detained somewhere in the West. He has not recorded the mortgage and now another creditor has levied on the goods. Kindly inform me whether my friend, the mortgagee, or the creditor who has attached the goods is entitled to them.

REPLY.—Where a chattel mortgage is made and the goods remain in the possession of the mortgagor and the mortgage is not properly filed in the office of the register, town clerk or county clerk, as the case requires, the mortgage is void as against the mortgagor's subsequent creditors or subsequent purchasers or mortgagees in good faith and for value. The attaching creditor has, therefore, the better claim to the goods in question.

QUESTION.—I consigned goods to a firm in New York to sell for me, to return the proceeds of the sales to me, less their commission. They acted as my agent and as such collected about $300 which sum was the amount received on the sale of my consigned goods. This sum the firm refuses to deliver to me. What would you advise me to do?

REPLY.—As you state the facts, you would be entitled to an order of arrest, which would enable you to imprison your agent. This practice, although severe and not to be resorted to except in extreme cases, is generally the quickest means of effecting a settlement. As your agent, they have collected money to which you were entitled, and are liable to you either to turn over the money in question or to account to you for its disposition. We would advise you to place the case in the hands of a lawyer, with instructions to proceed in the matter without delay.

QUESTION.—Not long ago I wrote an article for a periodical. This periodical carries on a flap attached to its title page a regular copyright imprint. Does the copyright on the title page protect the entire contents of the periodical? In another case, where the article itself was copyrighted it was copied by an irresponsible journal, the copyright being ignored; it was then copied from the irresponsible journal into a paper of good standing. Can the party who last copied it be held, though innocent of any intention to defraud or to wrongfully use the article in question, or is the irresponsible journal who first copied it the only one I would be able to sue?

REPLY.—Periodicals are copyrightable, as books, and it has been held that the notice of copyright given on the title page protects the entire contents. As to your right of action against the parties who copied your article, we are of the opinion that you would not only have the right of action against the irresponsible journal who copied it directly from the periodical you mentioned, but that you would have a cause of action for infringement of your copyright against each and every individual or corporation that wrongfully copied your article. Fraud is not an essential element to a suit of infringement. If, therefore, the copyright is in fact violated, the intention with which it is done is immaterial, and an action will lie against all who so violate it.

Small Failure Record for the Half Year.

A recent issue of *Bradstreet's* says that the number of failures reported for the first six months of the current calendar year is the smallest for 18 years, 4,880. The estimated assets are $17,475,514, the total liabilities $60,064,208, and the percentage of assets to liabilities is 45.7. The articles adds: "Compared with a year ago, the falling off in number is 3.3 per cent., while compared with 1898 the decrease is 25 per cent., and even larger decreases are noted when comparisons are made with the first half of the years 1897 and 1896. This year, in fact for the first time in 18 years, the six months' failures have fallen below 5,000 in number. The volume of liabilities, it is true, is somewhat larger than a year ago, the increase being nearly $10,000,000, or 19 per cent., but, with the exception of the first six months of last year, the aggregate liabilities of the 4,880 failing traders, $60,064,208, is the smallest sum involved in the period mentioned since the year 1892, and, with that exception, is the smallest aggregate reported since 1887. Compared with 1898, a year of good business, liabilities this year show a decrease of 16.7 per cent., and, were it not for a few large failures, none of them, however, being significant of any marked change in business conditions, it is safe to say that in liabilities as in number the first half of the year 1900 would have been a record breaker."

The Lunkenheimer Co., Cincinnati, O., has received an order from the Russian Government to supply 900 special bronze valves of sizes between 3-4 inch and 3 inch. The valves are for industrial plants operated by the Government.

No one can breathe at a greater height than seven miles from the earth.

ITEMS OF INTEREST FROM EVERYWHERE.

Siberia produces one-tenth of the world's yield of gold, and but few of the mines have been worked. The immense coal deposits have scarcely been touched. One mile, with six beds, contains as much coal as all the deposits in England.

Last year there were coined, it is said, 32,000,000 more pennies than in the year before, and the coinage of nickels, dimes, quarters and halves increased largely. In dollars and cents, the increase in minor coinage for the fiscal year is about $3,700,000.

In the new regulations for the navigation of the Suez Canal, which have just been promulgated, is a provision that no vessel shall pass through the canal unless it has an electric searchlight capable of lighting the channel 1,400 yards ahead, and also electric lights capable of illuminating an area of 240 yards around the vessel.

The highest village in Europe is Avers Platz, in Switzerland (7,500); the highest inhabited point in Europe is the Hospice of St. Bernard, in Switzerland (8,200 feet). In Colorado the mining town of Leadville, with 15,000 inhabitants, is over 14,200 feet above sea level; other mining camps are still higher, and some gold and silver mines are worked at an altitude of over 12,000 feet.

Recently a new method of creating intense heat in an incredibly short time by the combustion of a chemical compound was tested in the laboratory of Thomas A. Edison by Louis Dreyfus, of Frankfort-on-Main. Mr. Dreyfus placed a half cupful of a secret chemical in a crucible, covered it with a small quanity of powdered aluminum and then placed a wrench about half an inch thick and six inches long in the crucible. A match was touched to the compound, which blazed up furiously. In five seconds the wrench melted. It is estimated that the heat evolved in the process was 3,000 degrees centigrade, hitherto considered impossible to reach.

Two watch cases made of the same quantity of material, one of 18 carat gold and the other 14 carat gold, are not of the same weight. The density, that is to say, the relation between the weights of a certain volume of a body and that of the same volume of distilled water, is 15.22 for 18 carat gold, while for 14 carat gold it is 13.20. The difference of density between these two standards is in the ratio of about 8 to 7. For instance, a box weighing 8 grammes of 18 carat will weigh only 7 grammes if it is of 14 carat, though having precisely the same volume. This difference of density results from the metals forming the alloy, which are less heavy for equal volume. The density of pure rolled gold is 19.4.

Wood-working and other small tools of foreign manufacture are not in demand in Korea. Some of the mission schools are attempting the instruction of the natives along industrial lines, and this effort may result in the adoption of American tools. Individual missionaries and mechanics employed here in foreign work have trained Korean carpenters in the use of American tools; but as a rule they prefer their old style planes, which they draw toward them in planing, and like best to use their own saws, which necessitate the employment of two men sitting opposite each other on the ground and operating the saw on the stick or timber, which is held in place by the feet of the operators. In spite of these apparently clumsy methods, the Korean carpenters do very fair work.

Electric headlights for railway locomotives are coming very generally into use in the Western States, and are paying for themselves in saving the railway companies large sums formerly paid for cattle killed on the track. The light will show a cow or horse at a quarter of a mile on a dark night. With a good clean reflector the intensity of the light is about 8,000 candle power. On the front of the locomotive boiler, just aft of the smokestack, is located a small dynamo and a steam turbine, the whole being coupled together and inclosed in a watertight casing. To light up, the engineer simply turns on steam, the apparatus absorbing about 1¼ horse power when in operation. With one trimming of carbons the headlight will burn eight hours without further attention.

The price of aluminum, section for section, is 70 per cent. the price of brass and 50 per cent. the price of copper. There are only three metals cheaper than aluminum—iron, lead and zinc. Section for section, brass is 3.19 times heavier than aluminum. Section for section, copper is 3.33 times heavier than aluminum. In order to obtain a comparison in the price for equal sections between aluminum and brass, the brass price should be multiplied by 3.19. In order to obtain a comparison in the price for equal sections between aluminum and copper, the copper price should be multiplied by 3.33. In order to sell on an even basis per square foot with aluminum, brass sheet would have to sell at 11.28 cents per pound, and copper sheet would have to sell at 10.78 cents per pound.

Geologically, Spain is perhaps as rich in its metallic and mineral stores as any country in the world according to its area, and these can be utilized only by affording transportation by railways. Chief among such resources may be mentioned antimony in ten districts, anthracite in five districts, arsenic in five districts, asphalt in three districts, mercury in nine districts, sulphur in eight districts; copper, cobalt and nickel in twenty-eight districts; iron ore in thirty districts, coal in nine distrcts. And there are lignites and manganese mines, and marble quarries yielding the finest qualities and some of the most beautiful colors, which may be seen in many churches and public buildings. Cupreous and iron pyrites exist in enormous quantities. Silver and silver lead are important. Zinc is abundant, and wolframite, a metal now in demand at high prices in the manufacture of Bessemer and open-hearth steel for special purposes, exists in four districts.

The rapid increase in the demand for steel freight cars on American railways is one of the most striking features of recent railroad development in this country. It is stated that orders for new steel cars and for car supplies of this nature now in course of fulfillment aggregate in value something like $10,000,000. The total number of pressed steel cars that have been produced or are ordered up to the present time is 26,412. To make these some 400,000 tons of steel has been or is being used, and this has cost, as raw material, market changes considered, about $15,000,000. At a convention of railway men held in Saratoga a short time ago several of the most important types of steel cars were exhibited, including one of the new type Pennsylvania hopper cars, which have a coal carrying capacity of 119,970 pounds; a Great Northern type of self-clearing hopper of 110,000 pounds capacity; a New York Central flat car with a carrying capacity of 100,000 pounds, and an Alton flat-bottomed gondola of 80,000 pounds capacity.

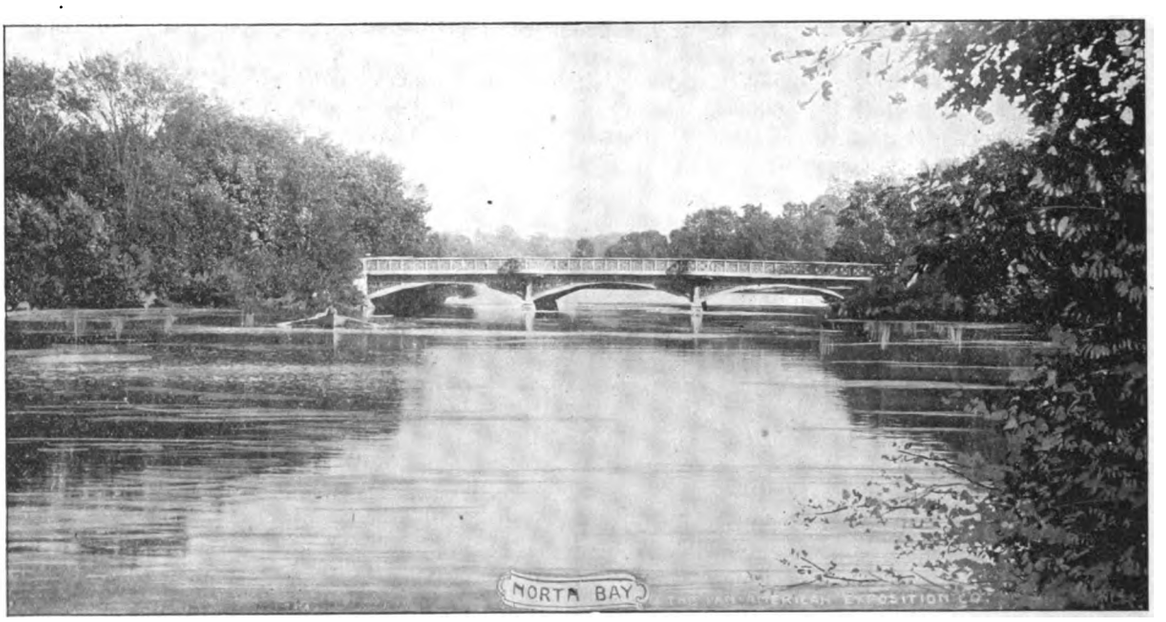
THE PAN AMERICAN EXPOSITION, 1901.



THE PARK LAKE.

WATER FEATURES AT THE PAN-AMERICAN EXPOSITION IN BUFFALO IN 1901.

The beautiful lake here illustrated is about half a mile in length and is within the grounds of the Pan-American Exposition to be held in Buffalo in 1901. The scene is in the most picturesque portion of Delaware Park, which is considered one of the finest in America. The lake is one of a number of fine water features of the Exposition, and is to be illuminated in a novel way at night by countless electric lights. The wooded slopes and shady walks that surround it are restful retreats, and the quiet lake scene is ever picturesque and refreshing. The picture is taken from a point near the west end of the lake, a few rods northeast of where the broad driveway from the main southern entrance crosses a narrow neck in the lake. A macadam drive follows the bluff along the north side at the left, and a viaduct over Delaware Avenue connects the Meadow Park from the lake section. Upon

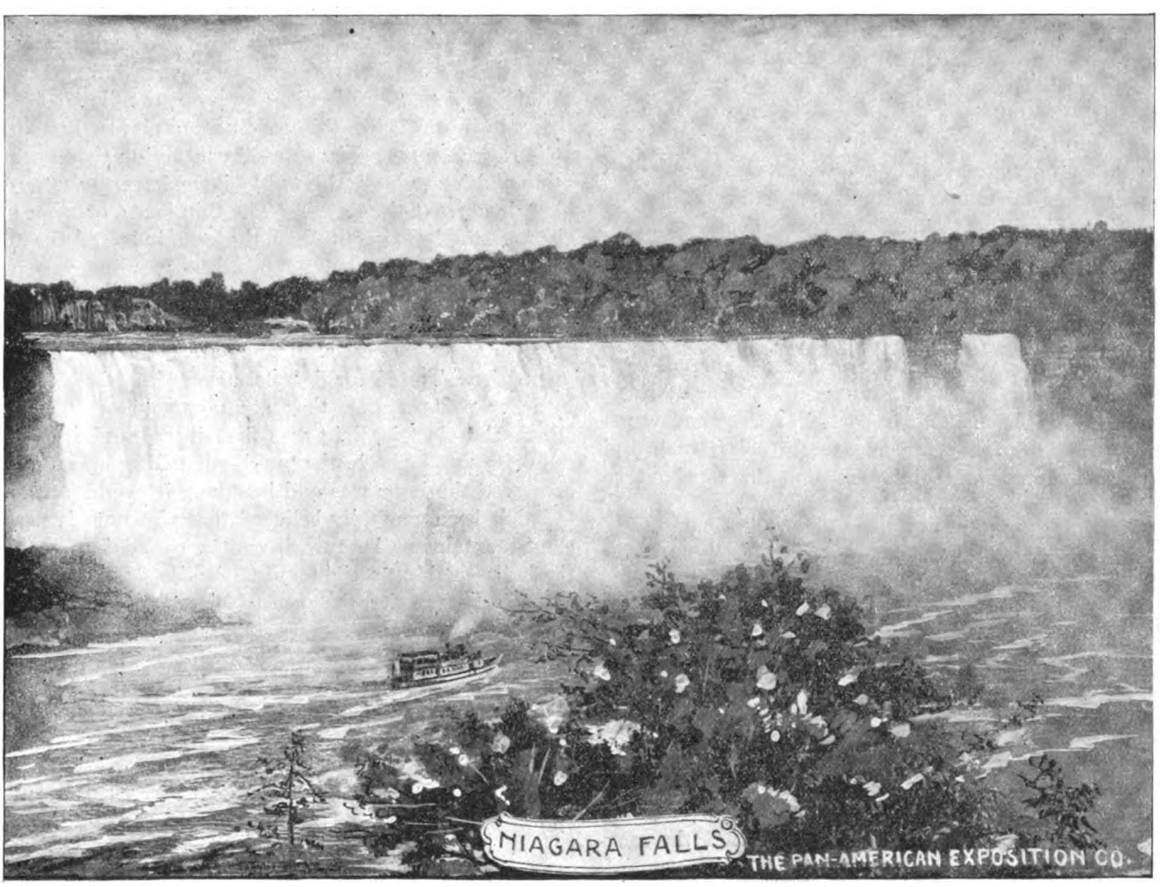
this portion of the park many thousands of dollars have been expended in improvements. The shrubs and trees include many of the rare decorative species and varieties, and a profusion of flowers is always to be seen along the drives and walks throughout the Summer. The main buildings of the Exposition are directly north of the point from which the view is taken.

The lake is to be connected by a series of small cataracts with the grand canal, mirror lakes and lagoons that surround the Exposition buildings.

THE NORTH BAY.



ONE OF THE PARK SCENES AT THE PAN-AMERICAN EXPOSITION AT BUFFALO.

The view here shown of the North Bay of Delaware Park, which is included in the site of the Pan-American Exposition, to be held at Buffalo next year, is taken from a point north of the site of the Albright Art Gallery. This is destined to be, in view of its magnificent surroundings, in the near future one of the most beautiful reaches of water in the country. The bridge in the picture, graceful and substantial as it is, is to be replaced by a far more imposing and ornate structure. The bridge crosses a narrow neck in the Park Lake and carries the broad and beautiful driveway which leads from the main southern entrance at Forest Avenue to the Exposition buildings. On the north side of the North Bay will stand the fine substantial and permanent building to be erected by the State of New York, and which will become after the Exposition, the home of the valuable collection of Indian, Colonial and pioneer relics and library owned by the Buffalo Historical Society. Opposite the New York State Building on the south side of the bay will stand the Albright Art Gallery, which is to serve the purposes of the Exposition for the Department of Fine Arts. This building is the gift of Mr. J. J. Albright, of Buffalo, to his fellow citizens. It is to be strictly fireproof, of white marble, in the Ionic style of architecture, and will stand on a broad terrace sustained by a wall of granite blocks. The building will be 250 feet long by about 150 feet wide, and is to be of such a substantial character as to withstand the elements for many generations. It will become the public art gallery of Buffalo at the close of the Exposition, the Buffalo Fine Arts Academy having the custody of the property.

THE FALLS OF NIAGARA.

GREATEST AUXILIARY ATTRACTION TO THE PAN-AMERICAN EXPOSITION.

The importance of the great falls, rapids and gorge of the Niagara River as auxiliaries to the many and varied attractions of the Pan-American Exposition, to be held in Buffalo May 1 to Nov. 1, 1901, cannot well be overestimated. In its immense flow of waters, its grand scenery and its historic lore the Niagara is one of the most renowned rivers of the world. Its great cataract has defied the descriptive powers of poets and philosophers and baffled the delineative skill of painters and photographers. The grandeur of their environment renders the Falls perennially interesting at all seasons of the year, and very few of those who visit the Pan-American Exposition but will desire also to visit them. The trip from Buffalo can be made in half an hour. There are many points of view and places of interest, and the visitor can plan his itinerary according to the leisure time at his disposal. If time will permit, the cataract should be viewed from both sides of the river, and trips should be made the length of the Gorge, either along the cliffs above or over the trolley road which runs close to the water's edge. Perhaps the most comprehensive near views of the Falls are those obtained on the Canadian side of the Gorge, especially that from Falls View station. Here is seen a complete panorama embracing the rushing and turbulent currents of the upper rapids and the whole sweep of the falling waters, reaching from end to end nearly four-fifths of a mile, with the great Horseshoe Fall in the foreground separated by Goat Island from the American Fall, which is 158 feet high and 1,881 feet wide. In the river below plies the little steamer, *The Maid of the Mist*, carrying visitors close to the foot of the

NIAGARA FALLS, PAN-AMERICAN EXPOSITION.

Digitized by Google

Falls at various points and affording splendid views of the descending waters. The State Reservation on the American side and Queen Victoria Park across the river in Canada are delightful observation grounds, both open for the enjoyment of the public free of any charge. To the scientific visitor the electrical power development at the Falls will be especially interesting. On the American side there are two great corporations utilizing the current of the Niagara River for developing electric power used in many industries at the Falls. The power thus generated by one of these corporations is also transmitted to Buffalo, twenty-five miles distant, for use for the electric lighting of the city, for operating a great electric trolley car system and in many important manufacturing establishments. The power thus transmitted will likewise be extensively used for the purpose of the Exposition.

Guarding the Present and Providing for the Future.

The question of credits is a very important one. We all know that we have got our credit system down to a finer point than it ever was before. We are more careful to whom we extend credit. We all know how valuable are the answers to letters of inquiry which we get from one another. I say right here that no public credit system can be put forth that is, for the wants of the manufacturing confectioners, so good as the practice of writing to and asking one another for information about this man or that man. Then you get the actual facts, the actual transactions, and you know something about him. It is no guesswork. Probably one-half of the mercantile agency reports are not based upon facts, but upon estimates. Their man goes into a place; he is unable to see the proprietor, but he looks around and sees the stock of goods on hand and he makes a report that they have such and such a place, that they are apparently doing such and such a business, and that their stock amounts to about so much money.

The question of credits has been taken up by regular associations of credit men. There is a National Association of 3,000 members. They have local associations in the leading cities of the country, and they are brainy men. They get together and discuss fraudulent failures. They devise ways and means for prosecuting fraudulent failures. They endeavor to throw the network of their protection around the manufacturer and the wholesale dealer and shield them against the swindler and the dishonest man. All over the country the opportunities for fraud in buying by dishonest purchasers are growing more difficult every day.

I make this assertion, in regard to credits, that the man whose losses last year exceeded one-third of 1 per cent. of his entire business wants to get his wits together and see where the fault lies. If his losses, in selling to the jobbing trade, exceeded one-quarter or one-third of 1 per cent. in the year 1899, he is out of the way on the question of credit.

I knew in my early days in business an organization in the western country, a concern that did a business of several million dollars a year, and that concern, when they retired at night, went to bed owing no man a dollar. When their goods arrived, that day the money went back. I will say to you gentlemen, that that same concern is in business to-day, and it stands way up on the top round of the financial ladder, high in financial credit and mercantile honor, because it does not allow a dollar of indebtedness. I believe that is what we must come to. As manufacturers, we must concentrate our efforts on our own particular business if we would succeed. We must keep our money where we can get at it. Some invest surplus money where it is not easily available. We have had four or five years of financial depression. We are going to have a period of moderately fair business. My idea is, if I am allowed to live to see the next depression, to endeavor to be in a financial condition where it will make no difference to me. That should be our aim.—From an address by Frank Sibley, of Sibley & Holmwood, Buffalo, N. Y., delivered at the 17th Annual Convention of the National Confectioners' Association, Niagara Falls, N. Y., July 7, 1900.

Filament of Modern Incandescent Lamp.

The glowing filament of a modern incandescent lamp represents a great amount of hard and faithful work in its evolution from the crude beginnings of twenty years ago. The first filaments were made of platinum wire, but this material melts when it reaches a temperature high enough to give a good commercially available light. It was seen that carbon must be used—the most refractory of the elements. In order to get carbon in the form of a slender filament or wire it was evidently easiest to take some vegetable substance containing carbon, cut it and bend it to the proper size and shape and then carbonize it by heat. In the first commercial lamps made in this country bamboo was used, the specimens being carefully selected and planed by hand to size. Paper, silk and cotton cords and a variety of other substances were tried, but the best is nitro-cellulose dissolved in ether or collodion, which may be squirted from a little glass teat in a fine stream that immediately solidifies and becomes a thin rod or cord, closely resembling the fine gut strings of a banjo or guitar. This thread is quite uniform and very strong and easily worked. After carbonization, however, the filament is not entirely uniform being thinner in some places than in others. It is therefore placed in a vessel containing the vapor of gasoline and is gradually heated to incandescence by passing an electric current through it. The thin spots, offering more resistance to the current than the remainder of the filament, become hot first and decompose the gasoline vapor, a very hard, fine grained, dense carbon being deposited upon the hot spot. In this way the filament automatically becomes uniform in a few moments. Lamps are now made in enormous quantities. Tested for defects, assorted, packed and guaranteed for performance, they are now sold at 20 cents each. When the electric light was first introduced in New York the price was $1 each, the purchaser taking his chances as to how good the lamp was and how long it would burn.

It has been generally believed that platinum is used in incandescent lamps because it can be sealed into the glass of the bulb—making a tight joint. While this is true, it is not the sole reason for the use of the very expensive metal. There are several alloys, notably one of iron and nickel, which have the same coefficient of expansion as glass and can easily be sealed into the bulbs. The objection to all other metals than platinum for the leading-in wires of lamps is not, however, their behavior with regard to thermal expansion, but the fact that all of them oxidize. No matter how much care is taken to keep the air away, with all other substances than platinum a thin film soon forms around the wire, starting an incipient leak of air into the bulb and soon breaking down the high vacuum necessary for the perfect working of incandescent lamps.

Electric Welding.

Ever since the days of the Tubal Cain metals have been welded in the same old way. They were heated in a forge, then one piece was lapped over the other and they were hammered on an anvil until a weld was made. Only solid pieces of metal could be thus treated, and tubes and metals having a low fusing point had to be soldered or brazed. Long articles were welded with difficulty and the process had many insuperable limitations.

Now, by the new process of electric welding, an almost inexhaustible field is opened. Brass may be welded, wire so small that it is scarcely thicker than a thread may be successfully joined, and steel rods an inch in diameter present no further difficulties than formerly existed with a nail rod.
